Adobe Experience Manager DevOps Engineer Expert Sample Questions (Q71-Q76):

NEW QUESTION # 71

Which tool allows real-time monitoring of AEM logs for troubleshooting performance issues?

- A. Log Analyzer in Cloud Manager
- B. Dispatcher Configuration File
- C. CRXDE Lite
- D. AEM Web Console (/system/console)

Answer: A

NEW QUESTION # 72

A DevOps engineer needs to store a separate API key per author and publish instance servers. The API key needs to be available to the service class `com.my_company.core.APIService`.

API Keys:

Author: KEY-001

Publish: KEY-002

Which option should the DevOps engineer use?

- A. `/apps/ < my_company > /config.author/com.my_company.core.APIService.cfg.json { "key": "KEY-001" }`
`/apps/ < my_company > /config.publish/com.my_company.core.APIService.cfg.json { "key": "KEY-002" }`
- B. `/apps/system/config/global/com.my_company.core.APIService.cfg.json { "author": "KEY-001", "publish": "KEY-002" }`
- C. `/apps/ < my_company > /config.author/com.my_company.core.APIService.cfg.json { "key": "KEY-001" }`
`/apps/ < my_company > /config.publish/com.my_company.core.APIService.cfg.json { "key": "KEY-002" }`
- D. `/apps/ < my_company > /config.author.publish/com.my_company.core.APIService.cfg.json { "author": "KEY-001", "publish": "KEY-002" }`

Answer: A

Explanation:

In Adobe Experience Manager, environment and runmode-specific OSGi configurations are managed using folder naming conventions. To target a specific runmode, the folder name must be appended with `.` followed by the runmode name. Therefore, to supply separate configurations for the Author and Publish runmodes, the configurations must reside in `/config.author/` and `/config.publish/` respectively. Option D uses a nested folder approach (`/config.author/`) which is not the standard OSGi runmode resolution syntax in AEM.

NEW QUESTION # 73

What is the primary reason for monitoring repository growth in AEM?

- A. To prevent user access to certain content nodes
- B. To optimize replication agents for better performance
- C. To enable faster component rendering on the author instance
- D. To ensure stable performance and avoid excessive storage usage

Answer: D

NEW QUESTION # 74

Which approach is best for configuring fundamental settings in Adobe Experience Manager (AEM) across multiple environments?

- A. Apply OSGi configurations through code and deploy them via the Cloud Manager pipeline
- B. Use the `/apps/settings` folder to manage configurations centrally
- C. Store configurations in the JCR under `/apps/config`
- D. Use the OSGi Web Console to apply manual changes in each environment

Answer: A

NEW QUESTION # 75

What should be done if a critical OSGi configuration change causes AEM to become unresponsive?

- A. Restart AEM and manually reapply the previous settings
- B. Deploy a package with the previous configuration settings
- C. Use CRXDE Lite to modify the OSGi configuration nodes
- D. Revert to the last known working OSGi configuration through the `/system/console/configMgr` UI

Answer: B
