Best Way to Pass Scrum SAFe-Practitioner Certification Exam

The scoring system of our SAFe-Practitioner exam torrent absolutely has no problem because it is intelligent and powerful. First of all, our researchers have made lots of efforts to develop the scoring system. So the scoring system of the SAFe-Practitioner test answers can stand the test of practicability. Once you have submitted your practice. The scoring system will begin to count your marks of the SAFe-Practitioner exam guides quickly and correctly. You just need to wait a few seconds before knowing your scores. The scores are calculated by every question of the SAFe-Practitioner Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q119-Q124):

NEW QUESTION # 119

Why is the modified Fibonacci sequence used when estimating?

- A. It results in greater precision
- B. It serves as a way to estimate large ranges
- **C. It reflects the uncertainty in estimating larger items**
- D. It can be used to predict unit test coverage

Answer: C

Explanation:

The modified Fibonacci sequence is a series of numbers that starts with 0, 1, 2, 3, 5, 8, 13, 20, 40, 100, and so on. It is used when estimating the relative size and complexity of backlog items, such as stories and features, using story points or normalized estimation. The modified Fibonacci sequence reflects the uncertainty in estimating larger items, as the gap between the numbers increases as the numbers get bigger. This means that the larger the item, the less precise the estimate, and the more likely it is to be split into smaller items. The modified Fibonacci sequence also helps to avoid the false sense of accuracy that comes from using linear scales, such as hours or days, which may not account for the variability and unpredictability of the work. NEW QUESTION # 120

Which statement is true about Features and Stories?

- A. Features should be small enough to fit into an Iteration
- B. They are prioritized by the team
- C. They are estimated like User Stories
- **D. Features can be larger than an Iteration but Stories should be small enough to fit into an Iteration**

Answer: D

Explanation:

In SAFe, a clear distinction is made between the purpose, structure and content of features, and that of stories (including enablers). Features are visible units of business intent that the customer recognizes, and it's at this level of detail that the customer is able to prioritize their needs¹. Features are maintained in the ART Backlog and sized to fit in a PI so that each delivers new value². Stories are short descriptions of a small piece of desired functionality written from the user's perspective. Stories are the primary artifact used to define system behavior in Agile³. Stories are small and must be completed in a single iteration³. Therefore, features can be larger than an iteration but stories should be small enough to fit into an iteration. NEW QUESTION # 121

What is one of the biggest benefits of decentralized decision-making?

- A. Ensures strategic decisions are made collaboratively
- B. Improves transparency
- C. Removes accountability from leaders
- **D. Reduces delays**

Answer: D

Explanation:

Decentralized decision-making is one of the principles of the Lean-Agile mindset, which is the foundation of SAFe. It empowers teams and individuals to make decisions based on the local context and the best available information, rather than waiting for approval from higher authorities. This reduces delays, increases speed, and improves responsiveness to customer needs. It also fosters innovation, learning, and ownership of the outcomes. NEW QUESTION # 122

What is one responsibility of the Scrum Master?

- A. To define the tasks and assign owners
- B. To facilitate the PI Planning session
- C. To prioritize the Team's Backlog
- **D. To remove impediments in order to help protect the team**

Answer: D

Explanation:

The Scrum Master is a servant leader and coach for the Agile team. One of their main responsibilities is to remove impediments that hinder the team's progress and performance. Impediments can be anything that blocks the team from delivering value, such as technical issues, dependencies, conflicts, or lack of resources.

The Scrum Master helps the team identify and resolve impediments as quickly as possible, and escalates them to the appropriate level if needed. By removing impediments, the Scrum Master helps the team stay focused, productive, and motivated. References: Exam Study Guide: SP (6.0) - SAFe Practitioner, [Scrum Master]

NEW QUESTION # 123

Which of the following categories addresses potential risks?

- A. Supervised
- B. Obtained
- **C. Resolved**
- D. Acquired

Answer: C

Explanation:

In SAFe 6.0, during PI Planning, program risks are identified, categorized, and addressed in a process called the ROAM technique. ROAM stands for Resolved, Owned, Accepted, and Mitigated.

* Resolved means the risk has been addressed and is no longer a concern.

* Owned means someone takes responsibility for managing the risk.

* Accepted means the risk is acknowledged and will be monitored.

* Mitigated means steps are taken to reduce the impact or likelihood of the risk.

Thus, the correct category that addresses potential risks is Resolved (option A).
