Free PDF Quiz The Best SAP - C-SIGDA-2403 - New SAP Certified Associate - Process Data Analyst - SAP Signavio Exam Answers

The latest C-SIGDA-2403 exam prep is created by our IT experts and certified trainers who are dedicated to SAP braindumps pdf for a long time. All questions of our C-SIGDA-2403 PDF VCE are written based on the real questions. Besides, we always check the updating of C-SIGDA-2403 exam questions to make sure exam preparation smoothly.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q23-Q28):

NEW QUESTION # 23

Where do you configure access rights for your workflow?

- A. On the Versions tab
- B. On the Actions tab
- C. On the Details tab

- D. On the Trigger tab

Answer: C

Explanation:

Access rights for workflows are typically configured on the "Details" tab within the workflow management system in SAP Signavio. This tab allows administrators to set permissions and access levels for different users or groups, ensuring that only authorized individuals can view or modify the workflow.

NEW QUESTION # 24

What are some benefits of using metrics in SAP Signavio Process Intelligence? Note: There are 2 correct answers to this question.

- A. Add and customize metrics from the library
- B. Share metrics between workspaces
- C. Define the purpose of an investigation
- D. Visualize important KPI's in the Process Discovery Widget

Answer: A,D

Explanation:

The benefits of using metrics in SAP Signavio Process Intelligence include the ability to visualize important Key Performance Indicators (KPIs) in the Process Discovery Widget and to add and customize metrics from the library. The Process Discovery Widget allows users to dynamically explore process data and metrics, making it easier to identify trends, bottlenecks, and opportunities for improvement. Furthermore, the extensive library of metrics in SAP Signavio Process Intelligence can be customized to meet the specific needs of an investigation, providing flexibility and depth in process analysis. Defining the purpose of an investigation and sharing metrics between workspaces are important, but they are broader aspects of process intelligence rather than direct benefits of using metrics. NEW QUESTION # 25

What is a core capability of the transaction code analysis?

- A. It can show the average ways processes are executed in a particular company code.
- B. It can check the number of transaction codes used on average for each process step and by company code.
- C. It can check the number of transaction codes used on average for one end-to-end process.
- D. It can show the various ways processes are executed in reality across the entire organization.

Answer: B

NEW QUESTION # 26

Which Widget is automatically created after creating a new investigation?

- A. Process Discovery
- B. Variant Explorer
- C. Process Conformance
- D. Value

Answer: A

Explanation:

When a new investigation is created in SAP Signavio Process Intelligence, the Process Discovery Widget is automatically generated. This widget is fundamental for visualizing the actual process as it occurs, based on the data derived from event logs. It provides an immediate, visual representation of the process flow, identifying the steps involved and how they connect. This automatic generation facilitates a quick start in analyzing the process, making it easier for users to begin their investigation into process efficiencies and bottlenecks.

NEW QUESTION # 27

Which Process Performance Indicator categories are most relevant when striving to identify automation potential? Note: There are 2 correct answers to this question.

- A. Exceptions
- B. Master data
- C. Backlog
- D. Automation rate

Answer: A,D

Explanation:

Identifying automation potential in SAP Signavio Process Intelligence involves analyzing Process Performance Indicators (PPIs) that highlight repetitive or error-prone tasks suitable for automation. The SAP Signavio Process Intelligence User Guide specifies:

* Exact Extract: "When assessing automation potential, key Process Performance Indicator categories include:

* Exceptions: Metrics related to errors, deviations, or manual interventions, which indicate tasks that could be automated to reduce human error.

* Automation Rate: Measures the proportion of tasks or cases that are already automated, helping identify opportunities to increase automation in low-automation areas." (SAP Signavio Process Intelligence User Guide, section on "Process Performance Indicators for Automation").

* Explanation:

* Option A (Exceptions): Exceptions, such as error rates or manual corrections, signal tasks that are prone to human error or inefficiency, making them prime candidates for automation to improve reliability and speed. For example, frequent manual overrides in an order processing step could be automated.

* Option D (Automation rate): The automation rate PPI shows the current level of automation in a process, allowing analysts to identify steps or processes with low automation rates that could benefit from robotic process automation (RPA) or workflow automation.

* Option B (Master data) is incorrect because master data issues (e.g., inconsistent customer records) are related to data quality, not directly to automation potential, though they may indirectly affect automation outcomes.

* Option C (Backlog) is incorrect as backlog metrics (e.g., pending cases) indicate workload issues but are less directly tied to identifying automation opportunities compared to exceptions or automation rate.
