

# High Hit-Rate Fire-Inspector-II Detailed Study Plan | Fire-Inspector-II 100% Free Actual Exams

What's more, part of that ITdumpsfree Fire-Inspector-II dumps now are free: <https://drive.google.com/open?id=18Fy3tBu7qiHgZhV2ZcfCaPLRj19vsaa4>

We have created a number of reports and learning functions for evaluating your proficiency for the International Code Council Fire-Inspector-II exam dumps. In preparation, you can optimize International Code Council Fire-Inspector-II practice exam time and question type by utilizing our International Code Council Fire-Inspector-II Practice Test software. ITdumpsfree makes it easy to download International Code Council Fire-Inspector-II exam questions immediately after purchase. You will receive a registration code and download instructions via email.

The price of our Fire-Inspector-II learning guide is among the range which you can afford and after you use our Fire-Inspector-II study materials you will certainly feel that the value of the Fire-Inspector-II exam questions far exceed the amount of the money you pay for the pass rate of our practice quiz is 98% to 100% which is unmatched in the market. Choosing our Fire-Inspector-II Study Guide equals choosing the success and the perfect service.

## Fire-Inspector-II Detailed Study Plan | Latest International Code Council Fire-Inspector-II: 67 - Fire Inspector II Exam

Studying with updated Fire-Inspector-II practice questions improve your skills of clearing the certification test in a short time. ITdumpsfree makes it easy for you to prepare successfully for the Fire-Inspector-II Questions in a short time with Fire-Inspector-II Dumps. The product of ITdumpsfree has been prepared under the expert supervision of thousands of experts worldwide.

### International Code Council 67 - Fire Inspector II Exam Sample Questions (Q66-Q71):

#### NEW QUESTION # 66

A local board of appeals may perform all of the following functions except:

- A. adopt rules and regulations for conducting its investigations.
- B. waive requirements of the fire code.
- C. approve alternate materials and types of construction.
- D. render interpretations of the fire code.

**Answer: B**

Explanation:

IFC Section 108 (Board of Appeals) outlines the board's role: it hears appeals on fire code official decisions (Section 108.1), can interpret the code (B), approve alternatives (C) per Section 104.9, and establish procedural rules (D) per Section 108.2. However, the board cannot "waive" code requirements outright (A)- it can only grant variances or approve alternatives that still meet the code's intent, not eliminate requirements entirely. Waiving implies nullification, which exceeds the board's authority; that power rests with the fire code official or legislative amendments. Thus, A is the exception.

Reference: IFC 2021, Section 108 (Board of Appeals), Section 104.9 (Alternative Materials and Methods).

### NEW QUESTION # 67

Clearance between tops of piles of combustibles and sprinkler heads shall not be less than \_\_\_ ft.

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

Reference to Fire Code Requirements for Clearance Between Combustible Fibers and Sprinklers:

The International Fire Code (IFC 2021), Section 3206.6, states that the minimum clearance between the tops of piles of combustibles and sprinkler deflectors shall be no less than 3 feet.

This requirement ensures that the sprinkler system operates efficiently and that water distribution is not obstructed in case of a fire.

Fire Safety Concerns:

Combustible fibers pose a high fire risk due to their flammability and tendency to generate large amounts of heat and smoke.

Adequate clearance prevents heat accumulation near the sprinkler heads, ensuring they activate at the correct temperature.

Clarification of Incorrect Answer Choices:

A: 2 ft. # Incorrect

Too low and could obstruct sprinkler operation, reducing water distribution effectiveness.

C: 4 ft. # Incorrect

Exceeds the required minimum per the IFC 3206.6 standard, though more clearance is beneficial.

D: 5 ft. # Incorrect

More than the code requirement, but the mandatory clearance is 3 feet.

Conclusion:

The correct and verified answer is B (3 feet) based on IFC 3206.6, ensuring proper sprinkler performance and fire safety for combustible fiber storage.

### NEW QUESTION # 68

All new building construction must have installed an approved water supply for fire protection which provides a minimum of:

- A. the required fire flow for fire protection.
- B. a static pressure of 60 psi at each hydrant.
- C. a static pressure of 40 psi at each hydrant.
- D. 250 gal. per minute at the fire-access outlet.

**Answer: A**

Explanation:

All new building construction must have an approved water supply that meets the minimum fire flow requirements necessary for fire protection. The exact fire flow depends on factors such as building size, occupancy type, construction materials, and hazard levels.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 507.1 (Required Water Supply) IFC 507.1 states that an approved water supply capable of providing the required fire flow must be installed in all new construction projects.

The required fire flow varies based on building classification and must be determined by the authority having jurisdiction (AHJ).

2. 2021 IFC - Appendix B (Fire-Flow Requirements for Buildings)

Table B105.1(2) provides fire flow requirements based on construction type and building area.

Fire flow must be calculated according to the ISO (Insurance Services Office) Fire Suppression Rating Schedule.

Detailed Explanation of Answer Choices:

Option A (Correct): The fire flow requirement is determined based on the building and fire protection needs, making this the correct answer.

Option B (Incorrect): A static pressure of 40 psi at each hydrant is not a universal requirement, as fire flow is the primary factor.

Option C (Incorrect): A static pressure of 60 psi is not the fire code's general requirement; fire flow is the priority.

Option D (Incorrect): 250 gallons per minute (GPM) at a fire-access outlet is not an overall fire code requirement for all buildings-it depends on the structure's classification.

Thus, the correct and verified answer is: A. The required fire flow for fire protection.

### NEW QUESTION # 69

The minimum fire-flow for a 75,000-sq. ft. building of Type IIB construction without a sprinkler system is:

- A. 5,500 gpm for 4 hours.
- B. 4,000 gpm for 4 hours.
- C. 3,000 gpm for 3 hours.
- D. 5,750 gpm for 4 hours.

**Answer: A**

Explanation:

Reference to Fire-Flow Requirements for Type IIB Buildings:

The International Fire Code (IFC 2021), Appendix B, Table B105.1(2) establishes the minimum fire-flow requirements for buildings based on construction type, size, and the presence of sprinkler systems.

For a 75,000 sq. ft. Type IIB (non-combustible, unprotected) building without sprinklers, the required fire-flow is 5,500 gpm for 4 hours.

Why Fire-Flow Matters:

Fire-flow ensures that sufficient water is available to control and extinguish fires in large buildings.

Type IIB buildings lack built-in fire resistance enhancements, making adequate fire-flow crucial.

Clarification of Incorrect Answer Choices:

A). 3,000 gpm for 3 hours # Incorrect

Too low for a building of this size and construction type.

B). 4,000 gpm for 4 hours # Incorrect

Below the required 5,500 gpm per IFC Appendix B.

D). 5,750 gpm for 4 hours # Incorrect

Slightly above the requirement but not the exact minimum mandated by IFC Table B105.1(2).

Conclusion:

The correct and verified answer is C (5,500 gpm for 4 hours) as per IFC Appendix B, Table B105.1(2), ensuring compliance with fire-flow standards for Type IIB buildings without sprinklers.

### NEW QUESTION # 70

The use of listed portable unvented oil-burning heating appliances is prohibited in which of the following occupancies?

- A. Groups R-3, M, S-1, and S-2 occupancies
- B. Groups B and F occupancies
- C. Groups A, E, I, R-1, R-2, R-3, and R-4 occupancies
- D. Groups A and B occupancies

**Answer: C**

Explanation:

Restrictions on Portable Unvented Oil-Burning Heaters

According to the International Fire Code (IFC) 2021, Section 603.4, the use of listed portable unvented oil-burning heating appliances is prohibited in certain occupancies where fire and life safety risks are higher.

The prohibited occupancies include:

Group A (Assembly) - Includes theaters, churches, stadiums, etc.

Group E (Educational) - Includes schools, daycares, etc.

Group I (Institutional) - Includes hospitals, nursing homes, jails, etc.

Group R-1, R-2, R-3, R-4 (Residential Occupancies) - Includes hotels, apartments, assisted living, and residential care facilities.

2. Why These Occupancies Are Prohibited

Portable unvented oil-burning heaters pose a significant fire hazard and can produce harmful gases such as carbon monoxide.

In high-occupancy and residential buildings, improper use or malfunction of these heaters could lead to fatal fire or health hazards.

Ventilation concerns in institutional and assembly settings make these heaters particularly dangerous.

### 3. Verification of Other Options

Option A (Groups A and B occupancies) - Incorrect, as Group B (Business) is not explicitly prohibited from using these heaters.

Option B (Groups B and F occupancies) - Incorrect, as Group F (Factory/Industrial) is not listed under IFC

603.4 as a prohibited occupancy.

Option C (Groups R-3, M, S-1, and S-2 occupancies) - Incorrect, as M (Mercantile) and S (Storage) occupancies are not listed as restricted areas.

Reference Sources:

International Fire Code (IFC) 2021 - Section 603.4 (Portable Unvented Oil-Burning Heating Appliances) NFPA 1: Fire Code (Portable Heater Use Restrictions in Various Occupancies)

### NEW QUESTION # 71

.....

The clients can have a free download and tryout of our Fire-Inspector-II test practice dump before they decide to buy our products. They can use our products immediately after they pay for the Fire-Inspector-II test practice dump successfully. If the clients are unlucky to fail in the test we will refund them as quickly as we can. There are so many advantages of our products that we can't summarize them with several simple words. You'd better look at the introduction of our Fire-Inspector-II Exam Questions in detail as follow by yourselves.

**Fire-Inspector-II Actual Exams:** <https://www.itdumpsfree.com/Fire-Inspector-II-exam-passed.html>

International Code Council Fire-Inspector-II Detailed Study Plan We offer you free demo for you to have a try, so that you can have a deeper understanding of what you are going to buy, International Code Council Fire-Inspector-II Detailed Study Plan Moreover, the answers of each question are confirmed and correct, which can ensure the high hit rate, Before purchasing, you can download and try any Fire-Inspector-II exam questions format, In order to give you a basic understanding of our various versions on our 67 - Fire Inspector II Exam Fire-Inspector-II exam questions, each version offers a free trial.

And what else should we expect, Because many of Latest Fire-Inspector-II Test Guide our institutions and businesses are built on the assumption of substantially greater employment stability and security than currently **Fire-Inspector-II Detailed Study Plan** exists, the impacts of economic uncertainty are large, disruptive and not fully understood.

## 100% Pass High-quality International Code Council - Fire-Inspector-II Detailed Study Plan

We offer you free demo for you to have a try, so that you can have a deeper Fire-Inspector-II understanding of what you are going to buy, Moreover, the answers of each question are confirmed and correct, which can ensure the high hit rate.

Before purchasing, you can download and try any Fire-Inspector-II exam questions format, In order to give you a basic understanding of our various versions on our 67 - Fire Inspector II Exam Fire-Inspector-II exam questions, each version offers a free trial.

They provide you information on the entire Fire-Inspector-II Reliable Test Pdf syllabus and enhance your exposure to ensure a brilliant exam success.
