CompTIA Exam DA0-002 Reference Exam Pass For Sure | DA0-002: CompTIA Data+ Exam (2025)

DumpsKing offers actual CompTIA Data+ Exam (2025) Exam Questions that make your success possible on the first try.

DumpsKing has helped many customers gain high scores. Before purchasing, you can download and try any DA0-002 Exam Questions format. CompTIA Data+ Exam (2025) DA0-002 with excellent pass rate.

CompTIA Data+ Exam (2025) Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which of the following is a NoSQL database?

- **A. MongoDB**
- B. PostgreSQL
- C. Oracle
- D. MySQL

Answer: A

Explanation:

This question falls under the Data Concepts and Environments domain, focusing on types of databases. The task is to identify a NoSQL database among the options.

* PostgreSQL (Option A): PostgreSQL is a relational (SQL) database, not NoSQL.

* MySQL (Option B): MySQL is a relational (SQL) database, not NoSQL.

* Oracle (Option C): Oracle Database is a relational (SQL) database, not NoSQL.

* MongoDB (Option D): MongoDB is a NoSQL database that uses a document-based model, storing data in JSON-like structures, making it the correct choice.

The DA0-002 Data Concepts and Environments domain includes understanding "different types of databases and data repositories," and MongoDB is a well-known NoSQL database.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

NEW QUESTION # 33

Which of the following best describes the semi-structured data that is gathered when web scraping?

- A. CSS
- **B. JSON**
- C. CSV
- D. HTML

Answer: B

Explanation:

This question pertains to the Data Acquisition and Preparation domain, which in DA0-002 includes understanding data acquisition concepts and the types of data gathered from various sources, such as web scraping. Web scraping involves extracting data from websites, and the data gathered is often semi-structured, meaning it has some organizational structure but isn't fully relational like a database table.

* JSON (Option A): JSON (JavaScript Object Notation) is a semi-structured data format commonly used in web applications.

Web scraping often retrieves data in JSON format via APIs or embedded scripts, as it's lightweight and structured with key-value pairs, making it ideal for semi-structured data.

* CSV (Option B): CSV (Comma-Separated Values) is a structured format typically used for tabular data. It's not commonly the direct output of web scraping, though scraped data might be converted to CSV later.

* CSS (Option C): CSS (Cascading Style Sheets) is used for styling web pages and isn't a data format, making it irrelevant for describing scraped data.

* HTML (Option D): HTML (HyperText Markup Language) is the structure of web pages and is often the raw format scraped during web scraping. While HTML is semi-structured due to its tag-based hierarchy, it's primarily a markup language, not a data format, and the actual data extracted is often parsed into formats like JSON.

The DA0-002 Data Acquisition and Preparation domain aligns with the DA0-001 focus on "data acquisition concepts" (web ID: 14), which includes identifying formats like JSON as semi-structured data commonly acquired through web scraping. JSON is the best fit here due to its prevalence in web data exchange.

NEW QUESTION # 34

Software end users are happy with the quality of product support provided. However, they frequently raise concerns about the long wait time for resolutions. An IT manager wants to improve the current support process. Which of the following should the manager use for this review?

- A. UAT
- B. KPI
- C. Infographic
- **D. Survey**

Answer: D

Explanation:

This question falls under the Data Analysis domain, focusing on methods to gather data for process improvement. The IT manager needs to review user concerns about wait times, which requires collecting feedback.

* Infographic (Option A): An infographic visualizes data but isn't a method for gathering feedback.

* KPI (Option B): KPIs (e.g., average resolution time) measure performance but don't directly gather user feedback.

* Survey (Option C): A survey collects detailed feedback from users about their experiences, such as wait times, making it the best method for this review.

* UAT (Option D): User Acceptance Testing validates software functionality, not support processes.

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods," and surveys are a standard method for collecting user feedback to analyze and improve processes.

NEW QUESTION # 35

A company gives users adequate data access permissions to allow them to fulfill their duties but nothing more. Which of the following concepts best describes this practice?

- A. Hierarchical access
- **B. Least privilege**
- C. Zero Trust
- D. Active Directory

Answer: B

Explanation:

This question pertains to the Data Governance domain, focusing on data security and access control principles. The company restricts access to the minimum needed for duties, which aligns with a specific security concept.

* Active Directory (Option A): Active Directory is a tool for managing users and permissions, not a concept.

* Hierarchical access (Option B): Hierarchical access implies access based on roles in a hierarchy, but it doesn't specifically focus on minimal access.

* Zero Trust (Option C): Zero Trust requires continuous verification for all access, which is broader than just minimal permissions.

* Least privilege (Option D): Least privilege ensures users have only the permissions necessary for their duties, which matches the scenario.

The DA0-002 Data Governance domain includes "data privacy concepts," and least privilege is a fundamental principle for secure access control.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

NEW QUESTION # 36

A data analyst troubleshoots a dashboard every day for a week. Which of the following techniques best addresses how to validate the data moving forward?

- **A. Setting up monitoring alerts**
- B. Rebuilding the dashboard
- C. Reaching out to users daily
- D. Inquiring about structure changes

Answer: A

Explanation:

This question pertains to the Data Governance domain, focusing on ensuring data quality and reliability in dashboards over time. Daily troubleshooting indicates a recurring issue, and the task is to validate data moving forward.

* Inquiring about structure changes (Option A): This might identify past issues but doesn't provide ongoing validation.

* Setting up monitoring alerts (Option B): Monitoring alerts can automatically notify the analyst of data issues (e.g., missing updates, errors), providing a proactive way to validate data continuously.

* Reaching out to users daily (Option C): This is inefficient and reactive, not a sustainable validation method.

* Rebuilding the dashboard (Option D): Rebuilding might fix current issues but doesn't ensure future validation.

The DA0-002 Data Governance domain includes "data quality control concepts," such as implementing monitoring to ensure data reliability in dashboards.
