300-715 Top Dumps, 300-715 Training Material

Among all substantial practice materials with similar themes, our 300-715 practice materials win a majority of credibility for promising customers who are willing to make progress in this line. With excellent quality at attractive price, our 300-715 practice materials get high demand of orders in this fierce market with passing rate up to 98 to 100 percent all these years. We shall highly appreciate your acceptance of our 300-715 practice materials and your decision will lead you to bright future with highly useful certificates. We have handled professional 300-715 practice materials for over ten years. Our experts have many years' experience in this particular line of business, together with meticulous and professional attitude towards jobs.

Cisco 300-715 Certification Exam is a challenging and prestigious certification that can help IT professionals advance their careers in network security and identity management. By passing the exam, candidates can demonstrate their expertise in implementing and configuring Cisco ISE solutions, as well as their ability to design, deploy, and manage secure network infrastructures.

Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q187-Q192):

NEW QUESTION # 187
An administrator is adding a switch to a network that is running Cisco ISE and is only for IP Phones.
The phones do not have the ability to authenticate via 802.1X.
Which command is needed on each switch port for authentication?

- A. dot1x system-auth-control
- B. mab
- C. enable bypass-MAC
- D. enable network-authentication

Answer: B

Explanation:
Standalone MAC Authentication Bypass (MAB) is an authentication method that grants network access to specific MAC addresses regardless of 802.1X capability or credentials. As a result, devices such as cash registers, fax machines, and printers can be readily authenticated, and network features that are based on authorization policies can be made available.
Before standalone MAB support was available, MAB could be configured only as a failover method for 802.1x authentication.
Standalone MAB is independent of 802.1x authentication.

NEW QUESTION # 188
An engineer is implementing Cisco ISE and needs to configure 802.1X. The port settings are configured for port-based authentication. Which command should be used to complete this configuration?

- A. authentication port-control auto
- B. aaa authentication dot1x default group radius
- C. dot1x system-auth-control
- D. dot1x pae authenticator

Answer: C

NEW QUESTION # 189
What are two components of the posture requirement when configuring Cisco ISE posture?
(Choose two)

- A. Client Provisioning portal
- B. remediation actions
- C. conditions
- D. access policy
- E. updates

Answer: B,C

NEW QUESTION # 190
What is a characteristic of the UDP protocol?

- A. UDP can detect when a server is slow
- B. UDP offers best-effort delivery
- C. UDP offers information about a non-existent server
- D. UDP can detect when a server is down.

Answer: B

Explanation:
