CheckPoint 156-551 Valid Test Duration - 156-551 Valid Test Fee

In order to make life better, attending CheckPoint certification examinations will be the best choice for every IT workers. Passing 156-551 exam and obtaining a certification help candidates get salary raise and position promotion opportunities. It will be a fast and convenient road to success for the certification with our CheckPoint 156-551 Practice Test Engine. As for our guaranteed pass policy, our products are too good a change to miss for ambitious people.

The Check Point Certified VSX Specialist - R81 (CCVS) exam covers a wide range of topics related to virtualized security solutions. This includes the installation, configuration, and management of Check Point's virtualized security solutions. 156-551 Exam also covers the deployment of virtualized security solutions in complex network environments. 156-551 exam is designed to test candidates' knowledge of Check Point's VSX technology, including its features and benefits.

CheckPoint Check Point Certified VSX Specialist - R81 (CCVS) Sample Questions (Q127-Q132):

NEW QUESTION # 127

How does a Virtual Switch differ from a traditional switch?

- A. It cannot filter VLANs
- B. It lacks port mirroring
- C. It's configured within VSX and runs in the VSX Gateway
- D. It has no MAC address table

Answer: C

Explanation:

Virtual Switches in VSX provide internal Layer 2 connectivity between VSs and are software- based constructs running within the VSX Gateway, offering the same functionalities as physical switches.

NEW QUESTION # 128

Which command can be used to check CPU utilization across VSs on a VSX Gateway?

- A. fw ctl multik stat
- B. top
- C. vsx_util cpu
- D. cpview

Answer: D

Explanation:

cpview offers a detailed, real-time dashboard of system metrics, including CPU, memory, and interface statistics per Virtual System. It's a powerful tool for identifying performance bottlenecks in multi-VS environments.

NEW QUESTION # 129

What is the purpose of the vsx_util reconfigure command?

- A. Collect traffic statistics
- B. Reset all VSIDs
- C. Push policy from SmartConsole
- D. Modify the topology of existing VSs

Answer: D

Explanation:

The vsx_util reconfigure command allows modification of the VS topology, including interface changes, routing configurations, and network object associations. It is useful during infrastructure updates.

NEW QUESTION # 130

Which routing configuration provides the highest level of VS independence?

- A. Autonomous routing
- B. Static routing
- C. Internal switching
- D. Centralized routing

Answer: A

Explanation:

Autonomous routing offers the highest level of independence by allowing each VS to manage its own routing protocols and tables. This model supports strict separation and policy control per virtual instance.

NEW QUESTION # 131

Which deployment scenario best supports multiple data centers using VSX?

- A. Dual VSX Gateways in ClusterXL Load Sharing
