Buy ValidExam Amazon SOA-C02 Exam Dumps With Free Updates

The web-based Amazon SOA-C02 Practice Exam is compatible with all operating systems, including Mac, Linux, iOS, Android, and Windows. It is a browser-based AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) practice exam that works on all major browsers, including Chrome, Firefox, Safari, Internet Explorer, and Opera. This means that you won't have to worry about installing any complicated software or plug-ins.

The SOA-C02 Exam covers a wide range of topics, including AWS services, deployment models, monitoring and logging, security and compliance, and networking. To pass the exam, candidates must demonstrate their ability to design, deploy, and maintain highly available, scalable, and fault-tolerant systems on AWS.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q90-Q95):

NEW QUESTION # 90

A SysOps administrator is responsible for the performance of an AWS Lambda function. The Lambda function has a timeout of 3 seconds and has values set for provisioned concurrency and reserved concurrency. Amazon CloudWatch metrics show that the Lambda function is experiencing several throttles each second. The metrics also show that the Lambda function's average duration is less than 100 ms. What should the SysOps administrator do to eliminate the function throttles?

- A. Configure a dead-letter queue for the Lambda function.
- B. Increase the Lambda function's provisioned concurrency value.
- **C. Increase the Lambda function's reserved concurrency value.**
- D. Increase the Lambda function's memory.

Answer: C

Explanation:

The scenario indicates:

- * Function is being throttled (i.e., invoked more often than allowed)
- * Function is fast (< 100ms)
- * Provisioned concurrency is set but still throttled
- * This suggests the reserved concurrency limit is too low

From the AWS Lambda Concurrency Documentation:

Reserved concurrency limits the maximum concurrency for a function and also guarantees the capacity.

If your invocations exceed the reserved concurrency limit, Lambda throttles the function.

NEW QUESTION # 91

A company recently purchased Savings Plans. The company wants to receive email notification when the company's utilization drops below 90% for a given day.

Which solution will meet this requirement?

- A. Create a Savings Plans alert to monitor the daily utilization of the Savings Plans. Configure an Amazon Simple Notification Service (Amazon SNS) topic for email notification when the utilization drops below 90% for a given day.
- B. Create an Amazon CloudWatch alarm to monitor the Savings Plan check in AWS Trusted Advisor. Configure an Amazon Simple Queue Service (Amazon SQS) queue for email notification when the utilization drops below 90% for a given day.
- **C. Use AWS Budgets to create a Savings Plans budget to track the daily utilization of the Savings Plans. Configure an Amazon Simple Notification Service (Amazon SNS) topic for email notification when the utilization drops below 90% for a given day.**
- D. Create an Amazon CloudWatch alarm to monitor the SavingsPlansUtilization metric under the AWS /SavingsPlans namespace in CloudWatch. Configure an Amazon Simple Queue Service (Amazon SQS) queue for email notification when the utilization drops below 90% for a given day.

Answer: C

Explanation:

AWS Budgets can be used to create a Savings Plans budget and track the daily utilization of the company's Savings Plans. By creating a budget, it will trigger an action when the utilization drops below 90%, which in this case will be to send an email notification via an Amazon SNS topic. This will ensure that the company is notified when their Savings Plans utilization drops below 90%, allowing them to take action if necessary.

NEW QUESTION # 92

A company uses an AWS CloudFormation template to provision an Amazon EC2 instance and an Amazon RDS DB instance. A SysOps administrator must update the template to ensure that the DB instance is created before the EC2 instance is launched. What should the SysOps administrator do to meet this requirement?

- A. Change the order of the resources in the template so that the RDS resource is listed before the EC2 instance resource.
- B. Create multiple templates. Use AWS CloudFormation StackSets to wait for one stack to complete before the second stack is created.
- **C. Add the DependsOn attribute to the EC2 instance resource, and provide the logical name of the RDS resource.**
- D. Add a wait condition to the template. Update the EC2 instance user data script to send a signal after the EC2 instance is

started

Answer: C

NEW QUESTION # 93

A company has a high-performance Windows workload. The workload requires a storage volume that provides consistent performance of 10,000 KDPS. The company does not want to pay for additional unneeded capacity to achieve this performance. Which solution will meet these requirements with the LEAST cost?

- A. Use an Amazon FSx for Windows File Server for system that is configured with 10,000 IOPS
- B. Use an Amazon Elastic File System (Amazon EFS) file system w/ Max I/O mode.
- C. Use a General Purpose SSD (gp3) Amazon Elastic Block Store (Amazon EBS) volume that is configured with 10,000 provisioned IOPS.
- **D. Use a Provisioned IOPS SSD (io1) Amazon Elastic Block Store (Amazon EBS) volume that is configured with 10,000 provisioned IOPS**

Answer: D

NEW QUESTION # 94

A company is running a website on Amazon EC2 instances that are in an Auto Scaling group. When the website traffic increases, additional instances take several minutes to become available because of a long-running user data script that installs software. A SysOps administrator must decrease the time that is required (or new instances to become available). Which action should the SysOps administrator take to meet this requirement?

- **A. Update the Auto Scaling group to launch instances that have a storage optimized instance type**
- B. Purchase Reserved Instances to cover 100% of the maximum capacity of the Auto Scaling group
- C. Use EC2 Image Builder to prepare an Amazon Machine Image (AMI) that has pre-installed software
- D. Reduce the scaling thresholds so that instances are added before traffic increases

Answer: A
