The efficiency of going it alone is very low, and it is easy to go to a dead end. You really need a helper. Take a look at the development of C-SEC-2405 Guide quiz and you will certainly be attracted to it. The advantages of C-SEC-2405 study materials are numerous and they are all you need!

SAP Certified Associate - Security Administrator Sample Questions (Q82-Q87):

NEW QUESTION # 82
Which user type in SAP S/4HANA Cloud Public Edition is used for API access, system integration, and scenarios where automated data exchange is required?

- A. SAP Communication User
- B. SAP Support User
- C. SAP Technical User
- D. SAP Administrative User

Answer: A

Explanation:
In SAP S/4HANA Cloud Public Edition, the SAP Communication User is specifically designed for API access, system integration, and scenarios requiring automated data exchange. This user type is utilized for machine-to-machine communication, such as integrating SAP systems with external applications or services via APIs, ensuring seamless and secure data flows without human intervention. Unlike SAP Administrative Users, who focus on system management tasks, or SAP Support Users, who are used for troubleshooting and support activities, the Communication User is optimized for programmatic access. The SAP Technical User, while sometimes used in on-premise systems, is not the standard term in SAP S/4HANA Cloud Public Edition for this purpose. The Communication User's role ensures that automated processes, such as data synchronization or third-party integrations, are executed efficiently while maintaining strict security controls and auditability.

NEW QUESTION # 83
What are some security safeguards categories? Note: There are 3 correct answers to this question.

- A. Financial
- B. Organizational
- C. Access Control
- D. Technical
- E. Physical

Answer: C,D,E

NEW QUESTION # 84
What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- B. Field values were unchanged and no new authorization was added.
- C. The field delivered with content was changed but the old value was retained.
- D. Field values have not been changed.

Answer: C

Explanation:
* Context:During role maintenance in SAP, status values indicate changes or actions applied to field values.
* Solution Explanation:
* A status of "Old" means the field value was delivered with content but has since been modified, retaining the old value.
SAP Security References:
* SAP Role Maintenance Guide (Transaction PFCG)
* SAP Authorization Concept Documentation

NEW QUESTION # 85
Which of the following can you use to check if there is an application start lock on an application contained in a PFCG role? Note: There are 2 correct answers to this question.

- A. Transaction SUIM - Transactions Executable with Profile report
- B. Transaction SM01_CUS
- C. Transaction SM01_DEV
- D. Transaction SUIM - Executable Transactions report

Answer: A,D

Explanation:
To check if there is an application start lock on an application within a PFCG role, the SUIM (System User Information System) reports "Executable Transactions report" and "Transactions Executable with Profile report" are used. The Executable Transactions report (transaction SUIM) identifies transactions within a role and can indicate if any are locked, preventing their execution, by cross-referencing with system lock settings.
The Transactions Executable with Profile report analyzes transactions executable via a role's profile, highlighting any locked transactions that would block application starts. These reports provide detailed insights into role-based access and lock status, ensuring administrators can verify application availability.
Transaction SM01_CUS is used for locking transactions system-wide, not for checking role-specific locks, and SM01_DEV is not a standard SAP transaction for this purpose. By leveraging SUIM reports, administrators can efficiently manage and troubleshoot application access, ensuring that PFCG roles align with security requirements and that locked applications do not disrupt business processes.

NEW QUESTION # 86
What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- B. Field values were unchanged and no new authorization was added.
- C. The field delivered with content was changed but the old value was retained.
- D. Field values have not been changed.

Answer: C

NEW QUESTION # 87
.....
