## Oracle Cloud Database Services 2025 Professional Sample Questions (Q19-Q24):

### NEW QUESTION # 19

Which statement accurately describes the function of the HeatWave service in relation to a standard MySQL database?

- A. HeatWave is a standalone database system that replaces MySQL, offering enhanced security features.
- B. HeatWave is a specialized version of MySQL designed solely for transactional workloads, optimized for high concurrency.
- C. HeatWave provides an in-memory, massively parallel query accelerator to MySQL, improving analytical query performance.
- D. HeatWave is a clustering solution, where a single MySQL instance is split into multiple parts.
- E. HeatWave acts as a caching layer in front of MySQL, speeding up access to frequently accessed data.

**Answer: C**

Explanation:

HeatWave as a Query Accelerator:

HeatWave enhances the MySQL Database Service by providing an in-memory, massively parallel query accelerator. It is specifically designed to speed up analytical (OLAP) queries, making them run significantly faster compared to using MySQL alone.

- \* The system stores data in a columnar format and processes it in memory, utilizing distributed, parallel processing to achieve high performance.

- \* Unlike traditional MySQL setups, HeatWave can execute complex analytical workload efficiently.

Why the other options are incorrect:

- \* A: HeatWave is not a standalone database but an extension of MySQL.

- \* C: It is optimized for analytical workloads, not transactional.

- \* D: It is more than just a caching layer; it actively processes queries.

- \* E: HeatWave clusters do not split MySQL instances but enhance query processing.

### NEW QUESTION # 20

When migrating to MySQL HeatWave on Oracle Cloud Infrastructure (OCI), what is the recommended method for securely transferring large database backups?

- A. Shipping physical hard drives containing the backup files to the OCI data center.
- B. Use of Data Pump with a database link.
- C. Transferring the backup files directly over the public internet using FTP.
- **D. Using the Oracle Cloud Infrastructure Data Transfer Service with physical storage appliances.**
- E. Creating a secure VPN connection and transferring the backup files using scp.

**Answer: D**

Explanation:

Secure Transfer with OCI Data Transfer Service:

The OCI Data Transfer Service is designed to securely transfer large datasets, including database backups, to the cloud. It involves:

- \* Using physical storage appliances to copy data locally and then shipping these devices to OCI data centers.

- \* Data is encrypted and securely transported, minimizing the risks associated with online transfers.

- \* This method is cost-effective and practical for terabytes or petabytes of data, avoiding bandwidth limitations and reducing transfer time.

Why the other options are incorrect:

- \* A: FTP over the public internet is insecure and slow.

- \* B: Physical hard drives without encryption and secure handling increase data breach risks.

- \* D: SCP over VPN is secure but impractical for extremely large datasets.

- \* E: Data Pump is useful for database-to-database transfers, not large file migrations.

### NEW QUESTION # 21

Which of the following best describes the primary purpose of table rate limiting within Oracle NoSQL Database Cloud Service?

- A. To restrict the total amount of storage space a table can consume.
- B. To enforce strict data consistency across all table partitions, ensuring ACID compliance.
- C. To automatically optimize table schema design for improved query performance.
- **D. To prevent a single table from consuming excessive resources, ensuring fair allocation and preventing performance degradation for other tables and users.**

**Answer: D**

Explanation:

Table Rate Limiting:

Table rate limiting ensures that no single table monopolizes system resources, maintaining overall stability and performance in a multi-tenant environment. This feature is crucial for cloud services where numerous applications may share the same database infrastructure. It helps maintain fair access by capping the number of read/write operations per second.

Why the other options are incorrect:

- \* A: ACID compliance is achieved through consistency settings, not rate limiting.

- \* C: Schema optimization is not related to rate limiting.

- \* D: Rate limiting controls IOPS (Input/Output Operations Per Second), not storage space.

### NEW QUESTION # 22

If the Database Management Service is failing to collect performance metrics from a cloud database, which is the LEAST likely cause?

- A. The Database Management Service instance is located in a different region than the database.
- B. The database user account used by the Management Agent has been locked.
- C. The database is temporarily offline.
- D. Incorrect IAM policies preventing the service from accessing the database.

**Answer: A**

Explanation:

Reasoning:

The Database Management Service can collect performance metrics from databases across different regions within the same OCI tenancy. Therefore, the geographic location of the service relative to the database is not a common issue.

More Likely Causes:

\* A: IAM policies that do not grant sufficient permissions are a common issue.

\* B: If the database is offline, no metrics can be collected.

\* D: A locked database user account used by the Management Agent will prevent data collection.

Why C is incorrect:

The Database Management Service can be configured to collect metrics from databases across regions, as long as network access and permissions are properly configured.

### NEW QUESTION # 23

What role does the Exadata Storage Server Software play within the Exadata Database Service architecture?

- A. It manages the virtual machines hosting the database instances.
- B. It provides the operating system and management software for the database servers.
- C. It acts as a load balancer distributing connections across the database instances.
- D. It provides intelligent storage capabilities, including data filtering, compression, and encryption.

**Answer: D**

Explanation:

C: Intelligent Storage Capabilities:

\* The Exadata Storage Server Software enhances data processing at the storage layer.

\* Key features include:

\* Smart Scan: Offloads SQL processing to storage.

\* Compression: Reduces data size and improves I/O efficiency.

\* Encryption: Protects data at rest.

\* This software significantly boosts database performance by reducing data transfer to the compute nodes.

Why the other options are incorrect:

\* A. VM management: Handled by OCI infrastructure.

\* B. OS and management software: Not related to Exadata Storage Server Software.

\* D. Load balancing: Handled by Oracle RAC or OCI load balancers.
