Our company has always been following the trend of the CSQE certification. Our research and development team not only study what questions will come up in the CSQE exam, but also design powerful study tools like exam simulation software. With the Software version of our CSQE study materials, you can have the experience of the real exam which is very helpful for some candidates who lack confidence or experience of our CSQE training guide.

ASQ Certified Software Quality Engineer Exam Sample Questions (Q205-Q210):

NEW QUESTION # 205

A software maintenance release is conducted to deliver new

- A. functionality
- **B. features**
- C. defect corrections
- D. software products

Answer: B

Explanation:

Outsourcing is a business practice where a company hires an external organization to perform tasks, handle operations, or provide services. One key advantage of outsourcing is that it allows the primary company to focus its resources on its core competencies. By delegating non-core activities to external specialists, the company can concentrate on what it does best, thereby enhancing efficiency, innovation, and competitive advantage in its primary market.

NEW QUESTION # 206

Which of the following factors is important in a software product in terms of its adaptability?

- A. Trainability
- B. Efficiency
- **C. Portability**
- D. Accessibility

Answer: C

Explanation:

Portability refers to the ease with which software can be transferred from one environment to another. It is a critical factor in a software product's adaptability as it determines how well the software can function across different platforms, operating systems, or hardware configurations. High portability ensures that the software can be easily adapted to new environments without significant modification, thereby extending its usability and market reach.

NEW QUESTION # 207

A project team conducts a review of its latest software design. The review process is well-defined and is used by all projects within the company. As part of the review process, defect levels are compared against acceptable limits to determine appropriate corrective action. According to the CMMI-DEV V1.2, which of the following activities could the company perform to demonstrate characteristics unique to a Maturity Level 5 organization?

- **A. Submit defect data to a team for future defect prevention.**

- B. Collect defect data for each project's specific software process.
- C. Assess the validity of each defect data measurement independently.
- D. Record defect data and establish the process capability baseline

Answer: A

Explanation:

A Maturity Level 5 organization, according to the Capability Maturity Model Integration for Development (CMMI-DEV) V1.2, is focused on continuous process improvement. Such organizations leverage quantitative data to prevent defects and optimize processes. Submitting defect data to a team dedicated to future defect prevention aligns with this objective, as it emphasizes proactive measures to improve quality and prevent issues from reoccurring.

Collecting defect data and establishing process capability baselines are characteristics of lower maturity levels, while independent assessment of defect data ensures accuracy but does not inherently demonstrate a Level 5 focus on continuous improvement.

NEW QUESTION # 208

When a product release is archived, which of the following information should be included in the archive?

- A. Defect tracking database
- **B. Build environment and compilers**
- C. The date the product was launched
- D. Final version of documentation only

Answer: B

Explanation:

When a product release is archived, it is crucial to include the build environment and compilers used. This ensures that the exact environment in which the product was built can be recreated if needed. This information is vital for maintaining the ability to reproduce the build for future debugging, maintenance, or regulatory compliance purposes.

NEW QUESTION # 209

Which of the following measures would a project manager use to assess the team's progress against the project schedule?

- A. Function point metric
- B. SMART metrics
- **C. Earned value analysis**
- D. COCOMO H Model

Answer: C

Explanation:

Earned Value Analysis (EVA) is a project management technique used to measure project performance and progress. It integrates project scope, time, and cost data to provide accurate forecasts of project performance.

* Planned Value (PV) : The estimated value of work planned to be done.

* Earned Value (EV) : The value of work actually completed.

* Actual Cost (AC) : The actual cost incurred for the completed work.

Using these metrics, EVA can help project managers assess whether they are ahead or behind schedule and within or over budget.
