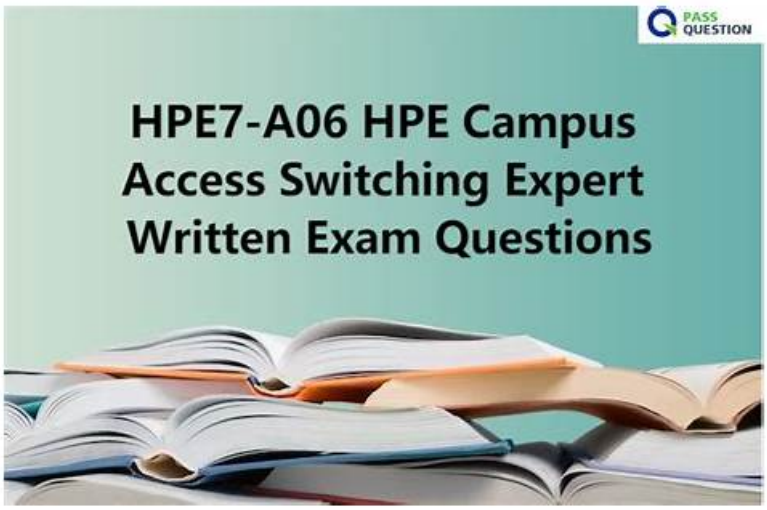
Valid HPE7-A06 Exam Questions - Reliable HPE7-A06 Exam Cost



DOWNLOAD the newest Lead2Passed HPE7-A06 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=10etK9VT_nHhNwlh8pyw94O3r0pwuFpSm

As long as you get to know our HPE7-A06 exam questions, you will figure out that we have set an easier operation system for our candidates. Once you have a try, you can feel that the natural and seamless user interfaces of our HPE7-A06 study materials have grown to be more fluent and we have revised and updated HPE7-A06 learning braindumps according to the latest development situation. Without doubt, we are the best vendor in this field and we also provide the first-class service for you.

The HPE7-A06 PDF dumps are suitable for smartphones, tablets, and laptops as well. So you can study actual HPE7-A06 questions in PDF easily anywhere. Lead2Passed updates HPE Campus Access Switching Expert Written Exam PDF dumps timely as per adjustments in the content of the actual HP HPE7-A06 Exam. The Desktop HPE Campus Access Switching Expert Written Exam practice exam software is created and updated in a timely by a team of experts in this field. If any problem arises, a support team is there to fix the issue.

Reliable HPE7-A06 Exam Cost & HPE7-A06 Actual Braindumps

If you really intend to pass the HPE7-A06 exam, our software will provide you the fast and convenient learning and you will get the best study materials and get a very good preparation for the exam. The content of the HPE7-A06 guide torrent is easy to be mastered and has simplified the important information. What's more, our HPE7-A06 prep torrent conveys more important information with less questions and answers. The learning is relaxed and highly efficiently.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47
Refer to the exhibit.

```
R-1# show ip ospf neighbors
VRF : default                              Process : 1
================================================

Total Number of Neighbors : 1

Neighbor ID      Priority  State              Nbr Address       Interface
-----------------------------------------------------------------------
10.0.0.2         0         2-WAY/DROther      10.255.1.1          1/1/1
```

```
R-2# show ip ospf neighbors vrf acme
VRF : acme                                 Process : 1
================================================

Total Number of Neighbors : 1

Neighbor ID      Priority  State              Nbr Address       Interface
-----------------------------------------------------------------------
10.255.1.0       0         2-WAY/DROther      10.255.1.0          1/1/1
```

R1 has not learned OSPF routes from a directly connected neighboring router. Based on the exhibit's show command output, which statement describes a misconfiguration that would cause the router's neighbor state to remain stuck at 2-WAY/DROther?

- A. There is an L2 interface MTU mismatch.
- B. There is a hello timer mismatch.
- C. The other router's directly connected interface is not attached to the default VRF.
- D. Both router's OSPF priority are set to 0.

Answer: D

Explanation:
Both routers show OSPF priority 0, so neither can be elected DR/BDR on this broadcast segment. Without a DR/BDR, adjacencies remain at 2-WAY/DROther and routes aren't exchanged.

NEW QUESTION # 48
The customer is experiencing periodic uplink congestion between campus-1's AGG-1 and core. This has boon negativelyaffecting voice communications.The VOIP phones edge mark their packets with DSCP EF. The uplink from AGG-1 to core is LAG1.
The customer has already configured the following class and policy on AGG-1:

```
class ip voip_class
 10 match udp any any dscp 46
 exit
policy voip_policy
 10 class ip voip_class action local-priority 6
 exit
apply policy voip_policy in
```

Based on this policy, which scrip), when deployed on AGG-1. will improve the reliable forwarding of voice trafficbetween AGG-1 and its uplink to the core?

- A.

```
qos schedule-profile 8qDwrrStrict
 dwrr queue 0 weight 1
 dwrr queue 1 weight 1
 dwrr queue 2 weight 1
 dwrr queue 3 weight 1
 dwrr queue 4 weight 1
 dwrr queue 5 weight 1
 strict queue 6  max-bandwidth 300000
 strict queue 7
 exit
apply qos schedule-profile 8qDwrrStrict
```

- B.
```
qos schedule-profile 8qDwrrStrict
 dwrr queue 0 weight 1
 dwrr queue 1 weight 1
 dwrr queue 2 weight 1
 dwrr queue 3 weight 1
 dwrr queue 4 weight 1
 dwrr queue 5 weight 1
 strict queue 6 max-bandwidth 500000
 dwrr queue 7 weight 1
apply qos schedule-profile 8qDwrrStrict
```
- C.
```
qos schedule-profile 8qDwrrStrict
 dwrr queue 0 weight 1
 dwrr queue 1 weight 1
 dwrr queue 2 weight 1
 dwrr queue 3 weight 1
 dwrr queue 4 weight 1
 dwrr queue 5 weight 1
 strict queue 6 max-bandwidth 400000
 dwrr queue 7 weight 5
interface lag 1
 apply qos schedule-profile 8qDwrrStrict
 exit
policy voip_policy
 10 class ip voip_class action local-priority 7
 exit
```
- D.
```
qos schedule-profile 8qDwrrStrict
 dwrr queue 0 weight 1
 dwrr queue 1 weight 1
 dwrr queue 2 weight 1
 dwrr queue 3 weight 1
 dwrr queue 4 weight 1
 dwrr queue 5 weight 1
interface lag 1
 apply qos schedule-profile 8qDwrrStrict
 exit
policy voip_policy
 10 class ip voip_class action local-priority 7
 exit
```

Answer: D

Explanation:
The problem describes uplink congestion affecting VoIP traffic (marked with DSCP EF, value 46) on AGG-1's LAG1 uplink. The existing configuration classifies this traffic into voip_class and applies voip_policy inbound, setting local-priority 6. To improve reliable forwarding during congestion, VoIP traffic needs strict priority queuing on the egress interface (LAG1).
* Analysis of Options:
* Option A applies a QoS schedule profile globally but doesn't modify the policy's local-priority or apply the schedule profile specifically to the congested LAG.
* Option B modifies voip_policy to set local-priority 7 (mapping DSCP 46 traffic to queue 7) and applies the 8qDwrStrict schedule profile to the egress interface lag 1. In the 8qDwrStrict profile, queue 7 is configured for strict priority, ensuring voice traffic gets precedence over lower-priority traffic during congestion. This aligns with best practices for QoS for VoIP.
* Option C also sets local-priority 7 and applies the schedule profile to lag 1, but the profile itself configures queue 7 with DWRR (Deficit Weighted Round Robin) instead of strict priority, which is less suitable for delay-sensitive voice traffic.
* Option D applies a schedule profile globally and uses DWRR for queue 7.
* Conclusion:Option B is the correct solution because it maps the DSCP EF traffic to the highest local priority (7) and applies a QoS schedule profile to the specific congested uplink (lag 1) that treats queue 7 with strict priority. This ensures voice traffic is prioritized reliably.
References:AOS-CX QoS Guide (specifically sections on Classification, Queuing, Scheduling Profiles, Strict Priority vs. DWRR, applying policies to interfaces/LAGs), DSCP to Queue mapping concepts. This relates to the "Performance Optimization" (6%) and "Connectivity" (9%) objectives.

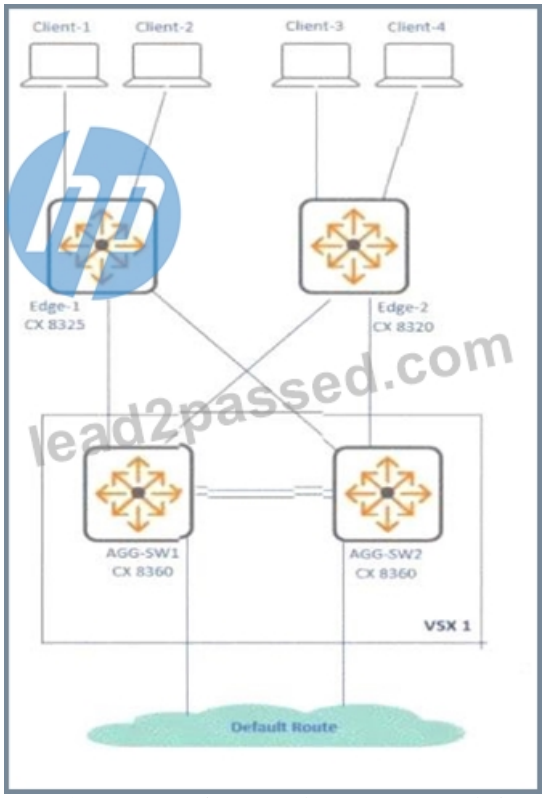
NEW QUESTION # 49
A customer wants to tunnel tagged traffic from the VoIP phones to a central location. Which UBT mode should you configure?

- A. local VLAN
- B. tunnel tagged
- C. VLAN extend
- D. multi VLAN

Answer: D

Explanation:
In HPE Aruba Networking, UBT (User-Based Tunneling) supports different modes. When you need to tunnel tagged traffic (such as voice VLAN from IP phones) to a central location, you use multi VLAN mode, which allows multiple VLANs (e.g., data + voice) to be tunneled while preserving their VLAN tags. This is the correct mode for VoIP phone deployments requiring central tunneling.

NEW QUESTION # 50
Exhibit.



A conference venue has a requirement to secure independent network users from each other in their network.
The following configurations are created on Edge-1:

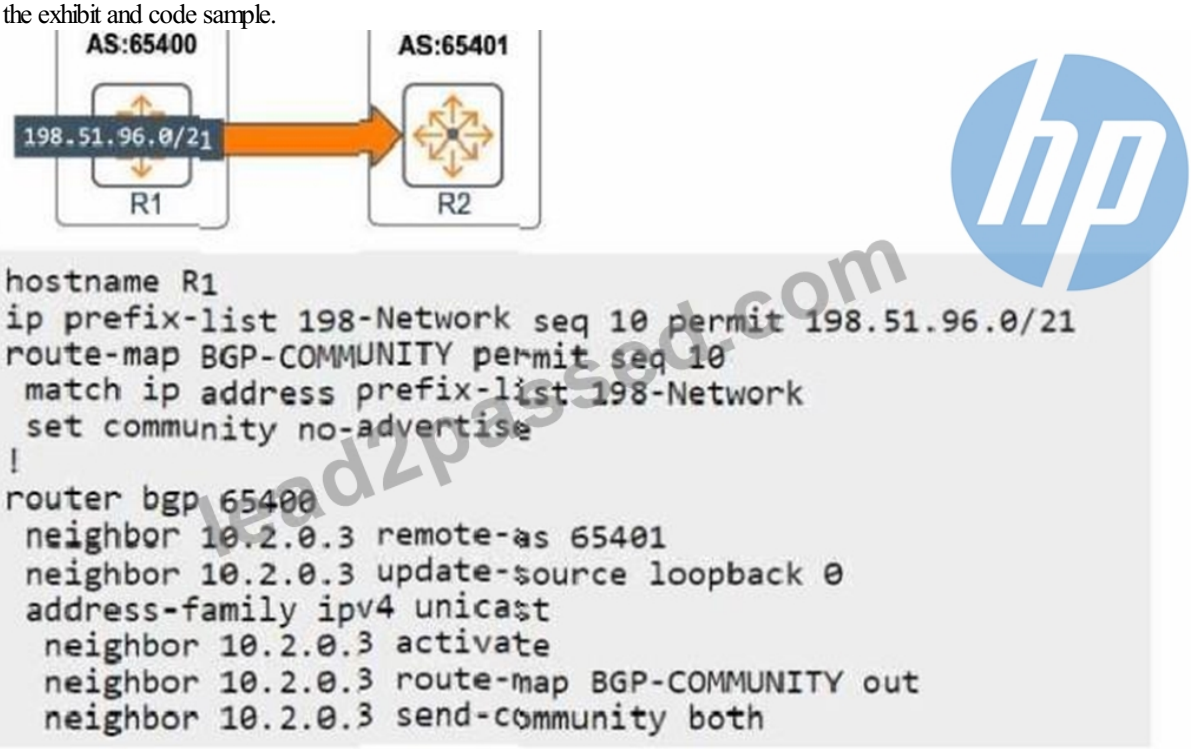
- A. change the VLAN 152 type. primary-vlan 152
- B. change the VLAN 151 primary-vlan 151
- C. change the VLAN 151 private-vlan community
- D. change the VLAN 152 private-vlan community

Answer: C

Explanation:
The requirement is to secure independent network users from each other in a conference venue using Edge-1.
This scenario typically calls for Private VLANs,specifically using the 'isolated' type to prevent communication between hosts within the same secondary VLAN.
* Analysis of Options:
* Private VLANs consist of a primary VLAN and one or more secondary VLANs (isolated or community). Isolated ports cannot communicate with other isolated ports in the same VLAN; they can only communicate with promiscuous ports (usually the router uplink). Community ports can communicate with each other and promiscuous ports.
* Option A: Configures VLAN 152 as private-vlan community.
* Option B: Configures VLAN 151 as private-vlan community.
* Option C: Defines VLAN 152 as a primary-vlan associated with itself, which isn't standard syntax
/logic.
* Option D: Defines VLAN 151 as a primary-vlan associated with itself.
* The goal isisolation. None of the options directly configure an isolated VLAN. Options A and B configure community VLANs, which allow communication between users within that VLAN, contradicting the requirement. Options C and D attempt to define primary VLANs in a potentially incorrect way.

* Caveat:There seems to be an issue with the provided options. Standard configuration to make VLAN 151 isolated would involve defining a primary VLAN (e.g., vlan 152 private-vlan primary) and then defining VLAN 151 as isolated (vlan 151 private-vlan isolated). Since none of the options correctly configure anisolatedVLAN, and the requirement is isolation, the question or options are likely flawed. However, if forced to interpret intent, questions sometimes test understanding of thetypesof private VLANs. Changing a VLANtocommunity type (Option B for VLAN 151) is a distinct action, even if it doesn't meet the statedisolationgoal. Without correct options for 'isolated', selecting the 'best' flawed option is difficult. Assuming the question intends to configure VLAN 151 assome typeof private secondary VLAN, Option B modifies VLAN 151's private VLAN characteristic.
* Conclusion:Based on the requirement for isolation, none of the provided options are correct. However, if assuming a potential error in the question or options and needing to select the closest modification related to private VLAN types for VLAN 151, Option B is chosen tentatively, despite configuring
'community' instead of the required 'isolated'.
References:AOS-CX Security Guide (Private VLAN configuration), Private VLAN concepts (Primary, Isolated, Community). This relates to the "Switching" (19%) and "Security" (10%) objectives.

NEW QUESTION # 51
Refer to the exhibit and code sample.



What is the effect when you add the statement "neighbor 10.2.0.3 send-community both" to the ipv4 address family? (Choose two.)

- A. It will cause existing BGP peering between R1 and R2 to flap.
- B. It causes R1 to negotiate for the ability to import and export all type-1 and type-2 communities with R2.
- C. It causes R1 to negotiate the ability to send and receive standard and extended communities with R2.
- D. The feature will be enabled without consequence to the R1 established session with R2.
- E. It causes R1 to allow the exchange of communities with NLRI records in both inbound and outbound direction.

Answer: C,E

Explanation:
The send-community both command ensures that both standard and extended BGP communities are sent to the neighbor, and this capability is negotiated during session setup.
The send-community both command enables the router to attach community attributes to BGP NLRI updates in both directions, not just outbound.

NEW QUESTION # 52
