P.S. Free 2026 Huawei H12-891\_V1.0 dumps are available on Google Drive shared by ITexamReview:  
[https://drive.google.com/open?id=18eFBPffHqfKw5HRZKkq9GIY\\_kR\\_KXKAP5](https://drive.google.com/open?id=18eFBPffHqfKw5HRZKkq9GIY_kR_KXKAP5)

As we all know, it is a must for all of the candidates to pass the H12-891\_V1.0 exam if they want to get the related H12-891\_V1.0 certification which serves as the best evidence for them to show their knowledge and skills. If you want to simplify the preparation process, here comes a piece of good news for you. We will bring you integrated H12-891\_V1.0 Exam Materials to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times. Before your purchase, you can free download the demo of our H12-891\_V1.0 exam questions to check the outstanding quality.

ITexamReview provides proprietary preparation guides for the certification exam offered by the H12-891\_V1.0 exam dumps. In addition to containing numerous questions similar to the H12-891\_V1.0 Exam, the HCIE-Datacom V1.0 (H12-891\_V1.0) exam questions are a great way to prepare for the Huawei H12-891\_V1.0 exam dumps.

## Accurate Huawei - H12-891\_V1.0 - HCIE-Datacom V1.0 Test Engine Version

HCIE-Datacom V1.0 (H12-891\_V1.0) Practice exams (desktop and web-based) are designed solely to help you get your HCIE-Datacom V1.0 (H12-891\_V1.0) certification on your first try. Our Huawei H12-891\_V1.0 mock test will help you understand the HCIE-Datacom V1.0 (H12-891\_V1.0) exam inside out and you will get better marks overall. It is only because you have practical experience of the HCIE-Datacom V1.0 (H12-891\_V1.0) exam even before the exam itself.

The Huawei H12-891\_V1.0 Exam covers a range of topics related to data communication, including network architecture, protocols, security, virtualization, and cloud computing. Candidates are expected to have a deep understanding of the latest trends and technologies in the field, as well as the ability to apply their knowledge to real-world scenarios.

## Huawei HCIE-Datacom V1.0 Sample Questions (Q233-Q238):

### NEW QUESTION # 233

New IS-IS TLVs are used to carry IPv6 addresses and reachability information to support IPv6 route processing and calculation.

- A. FALSE
- B. TRUE

**Answer: B**

Explanation:

IS-IS was originally designed for IPv4, but extensions via TLVs (Type-Length-Value) allow it to support IPv6. These are referred to as New IS-IS TLVs, including TLV 236 (IPv6 Reachability), TLV 232 (IPv6 Interface Address), etc. These TLVs are crucial for IPv6 route computation within IS-IS.

Exact Extract - HCIE-Datacom Guide - IPv6 Routing Protocols Chapter

"IS-IS uses new TLVs such as TLV 236 and TLV 232 to carry IPv6 prefix and interface address information. These TLVs are essential to enable IPv6 route calculation." Reference:

Huawei HCIE-Datacom Training Manual - IS-IS for IPv6 Support

HCIE-Datacom Study Guide - IS-IS TLVs Overview Section

### NEW QUESTION # 234

An engineer uses two routers to perform IPv6 tests and wants to use OSPFv3 for IPv6 network connectivity. Which of the following OSPFv3 configurations for R1 are correct?

- A. [R1-ospfv3-1-area-0.0.0.0] network 2001:DB8:2345:12::1 ::
- B. [R1-ospfv3-1] router-id 10.1.1.1
- C. [R1] router id 10.1.1.1
- D. [R1-GigabitEthernet0/0/1] ospfv3 1 area 0

**Answer: B,D**

Explanation:

OSPFv3 Configuration Principles:

OSPFv3, the OSPF version supporting IPv6, differs from OSPFv2 in several aspects:

Interface-based Configuration:

OSPFv3 is configured on interfaces directly, unlike OSPFv2 which uses the network command.

Router ID:

The Router ID is still a 32-bit number, typically represented as an IPv4 address.

It must be explicitly specified since OSPFv3 requires a Router ID for operation, even though it supports IPv6.

Analysis:

A). [R1-GigabitEthernet0/0/1] ospfv3 1 area 0:

Correct. This command enables OSPFv3 process 1 on the GE0/0/1 interface in Area 0.

B). [R1-ospfv3-1] router-id 10.1.1.1:

Correct. This correctly sets the Router ID for OSPFv3 process 1.

C). [R1-ospfv3-1-area-0.0.0.0] network 2001:DB8:2345:12::1 ::

Incorrect. OSPFv3 does not use the network command as in OSPFv2. Instead, OSPFv3 is directly configured on interfaces.

D). [R1] router id 10.1.1.1:

Incorrect. The Router ID should be set within the OSPFv3 process view, not the global configuration view.

Therefore, the correct answers are A and B.

RFC 5340: OSPF for IPv6

### NEW QUESTION # 235

The value of OSPF and BFD linkage is ? Radio

- A. BFD packet transmission interval can reach the 100-second level, which is slower than the OSPF induction link state
- B. Does not affect OSPF neighbor status
- C. OSPF's hello send interval is seconds, which is faster than BFD inductive link state
- D. Any change in BFD status is realized by detecting the BFD at the millisecond level, which correlates the OSPF state and realizes the purpose of OSPF rapid sensing link state

**Answer: D**

### NEW QUESTION # 236

Regarding the certification of the ISIS protocol, there is a correct statement

- A. After configuring zone authentication, the router issues an IIIH, SNP, LSP-strap-to-tape authentication TLV
- B. Connection authentication can realize the authentication of the hello messages of Leve-1 and Leve-2
- C. The two routers are configured for area authentication and interface authentication, and the passwords are the same, so the two can establish an isocopied relationship
- D. After configuring the connection authentication, the IIIH issued by the router must carry the authentication TLV

**Answer: B,D**

### NEW QUESTION # 237

Which of the following statements is incorrect about MP-BGP?

- A. MP-BGP needs to allocate private network labels for VPNv4 routes.
- B. The packet types and VPNv4 route advertisement policies of MP-BGP are the same as those of BGP-4.
- C. MP-BGP uses the MP\_REACH\_NLRI and MP\_UNREACH\_NLRI attributes to advertise VPNv4 routes.
- **D. When PEs and CEs exchange routes through BGP, you need to create a BGP process for each VPN instance in the CE.**

**Answer: D**

Explanation:

MP-BGP is an extension of BGP-4 that supports multi-protocol address families such as IPv6, VPNv4, etc. When PE and CE exchange BGP routes, there is no need to create a BGP process per VPN on the CE. The CE typically runs a standard BGP process, while the PE maintains separate VPN routing tables (VRFs).

Exact Extract - Huawei HCIE-Datcom MP-BGP Chapter:

"CE devices use standard BGP, and multiple VPNs can share the same BGP process on the CE. The PE handles VPN route separation through VRFs and MP-BGP." Reference:

### NEW QUESTION # 238

.....

Our company can guarantee that our H12-891\_V1.0 actual questions are the most reliable. Having gone through about 10 years' development, we still pay effort to develop high quality H12-891\_V1.0 study materials and be patient with all of our customers, therefore you can trust us completely. In addition, you may wonder if our H12-891\_V1.0 Study Materials become outdated. Our H12-891\_V1.0 actual questions are updated in a high speed. And you will enjoy the H12-891\_V1.0 test guide freely for one year, which can save your time and money. We will send you the latest H12-891\_V1.0 study materials through your email.
