PAP-001 Online Version, Valid PAP-001 Exam Test

They work together and put all their expertise to ensure the top standard of Channel Partner Program Certified Professional - PingAccess PAP-001 valid dumps. Now the Certified Professional - PingAccess PAP-001 exam dumps have become the first choice of Ping Identity PAP-001 Exam candidates. With the top-notch and updated Ping Identity PAP-001 test questions you can pass your Certified Professional - PingAccess PAP-001 exam successfully.

Ping Identity Certified Professional - PingAccess Sample Questions (Q15-Q20):

NEW QUESTION # 15

Users report the following about access to an application:

- * Inconsistent behavior depending on the browser used
 - * Denied access
 - * Prompt to accept a security exception
- Which configuration option should the administrator adjust?

- A. Request Preservation
- **B. SameSite Cookie**
- C. Enable PKCE
- D. Validate Session

Answer: B

Explanation:

Modern browsers enforce stricter cookie handling rules. If cookies are not configured correctly with the SameSite attribute, behavior can differ across browsers, leading to inconsistent authentication and access denials. Security exceptions may appear when session cookies are blocked.

Exact Extract:

"The SameSite cookie setting defines how browsers send cookies in cross-site requests. Misconfigured SameSite values can lead to inconsistent application behavior across browsers."

* Option A (Enable PKCE) is related to OAuth flow security, not browser cookie behavior.

* Option B (SameSite Cookie) is correct - this directly explains the inconsistent browser issues.

* Option C (Request Preservation) ensures query parameters are kept, not related to cross-browser session handling.

* Option D (Validate Session) checks session state but does not address browser inconsistencies.

Reference: PingAccess Administration Guide - Web Session Cookie Settings

NEW QUESTION # 16

What is the purpose of the `admin.auth` configuration setting?

- A. To enable automatic authentication to the PingAccess administrative console.
- B. To configure SSO for the administrative user interface.
- **C. To override the SSO configuration for the administrative user interface.**
- D. To define the method to use for authenticating to the administrative API.

Answer: C

Explanation:

The `admin.auth` setting in the `run.properties` file is used to specify a fallback authentication method for the administrative console.

Exact Extract from official documentation:

"To define a fallback administrator authentication method if the OIDC token provider is unreachable, enable the `admin.auth=native` property in the `run.properties` file. This overrides any configured administrative authentication to basic authentication." This makes it clear that the purpose of `admin.auth` is to override any configured SSO for the admin UI and enforce native (basic) authentication instead.

* Option A is incorrect because the `admin.auth` setting does not configure SSO. SSO for the admin UI is configured separately.

* Option B is incorrect because this setting does not apply to the administrative API; it specifically applies to the admin UI console.

* Option C is correct because it directly reflects the documented behavior: `admin.auth` overrides SSO configuration for the administrative UI and enables native authentication.

* Option D is incorrect because the setting does not enable automatic authentication. It still requires credentials, but falls back to basic auth.

Reference: PingAccess User Interface Reference Guide - Configuring Admin UI SSO Authentication

NEW QUESTION # 17

What is the purpose of the `engine.ssl.protocols` in the `run.properties` file?

- A. To configure the supported ciphers
- B. To configure SSL protocols used for clustering
- C. To configure the supported HTTPS port
- **D. To configure the supported TLS versions**

Answer: D

Explanation:

The property `engine.ssl.protocols.inrun.properties` specifies the TLS protocol versions that PingAccess engines will support for incoming HTTPS traffic.

Exact Extract:

"The `engine.ssl.protocols` property configures which TLS versions are enabled for HTTPS listeners."

- * Option A (ciphers) is incorrect - cipher suites are defined separately, not in this property.
- * Option B (HTTPS port) is incorrect - the port is defined in the engine listener, not here.
- * Option C (TLS versions) is correct - this property controls TLS version support (e.g., TLSv1.2, TLSv1.3).
- * Option D (clustering) is incorrect - clustering does not depend on this property.

Reference: PingAccess Administration Guide -run.properties settings

NEW QUESTION # 18

An administrator needs to configure a protected web application using the Authorization Code login flow. Which two configuration parameters must be set? (Choose 2 answers.)

- A. OAuth Token Introspection Endpoint
- **B. OAuth Client ID**
- C. OpenID Connect Issuer
- D. Virtual Host
- **E. OpenID Connect Login Type**

Answer: B,E

Explanation:

When using the Authorization Code Flow for authentication, PingAccess must be configured with:

- * An OAuth Client ID that identifies the application to the IdP.
- * The OpenID Connect Login Type set to Authorization Code.

Exact Extract:

"When configuring an OIDC web session, specify the OAuth client ID and select the OpenID Connect login type (Authorization Code, Hybrid, or Implicit)."

- * Option A (OAuth Token Introspection Endpoint) is not required for Authorization Code flow - token introspection is used in other cases.
- * Option B (OAuth Client ID) is correct - required for OIDC authorization requests.
- * Option C (OpenID Connect Issuer) is discovered automatically via metadata when you configure the token provider.
- * Option D (Virtual Host) is required for application exposure but not specific to OIDC flow.
- * Option E (OpenID Connect Login Type) is correct - must be set to "Authorization Code." Reference: PingAccess Administration Guide -Configuring OIDC Web Sessions

NEW QUESTION # 19

All style sheets should be accessible to all users without authentication across all applications. Which configuration option should the administrator use?

- A. Define a Protocol Source for the resource.
- B. Define Authentication Challenge Policy of none for the resource.
- C. Define a Default Availability Profile of on-demand for the resource.
- **D. Define Global Unprotected Resources for the resource.**

Answer: D

Explanation:

The correct way to ensure resources such as CSS files, images, or JavaScript are accessible without authentication across all applications is to configure Global Unprotected Resources.

Exact Extract:

"Global unprotected resources define resources that do not require authentication and are accessible to all clients across applications."

- * Option A is incorrect; Protocol Sources define back-end host connections, not authentication.
- * Option B would apply only per-resource, not across all applications.
- * Option C is correct - Global Unprotected Resources are designed for this exact purpose.
- * Option D (Availability Profile) is related to application health checks and availability, not authentication.

NEW QUESTION # 20

.....

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing PAP-001 certification can help you realize these goals and find a good job with high income. If you buy our PAP-001 practice test you can pass the exam successfully and easily. The purchase procedures are safe and we protect our client's privacy. We provide 24-hours online customer service and free update within one year. If you fail in the exam, we will refund you immediately. All in all, there are many advantages of our PAP-001 Training Materials.

PAP-001 Online Version: <https://www.dumpexams.com/PAP-001-real-answers.html>

Ping Identity Practice PAP-001 Online This is due to the fact that our learning materials are very user-friendly and express complex information in easy-to-understand language, With the intense development of the society and career workers are trying their best to improve their skills and prove them in form of specialized PAP-001 exam bootcamp, We are confident that our PAP-001 exam study material is the first-class in our market and it's also a good choice for you.

Explain how to schedule an automatic one-time execution Valid PAP-001 Exam Test of a command and the automatic recurring execution of a command, Manages multiple groups, This is due to the fact that our learning materials PAP-001 are very user-friendly and express complex information in easy-to-understand language.

Updated Practice PAP-001 Online - Easy and Guaranteed PAP-001 Exam Success

With the intense development of the society and career workers are trying their best to improve their skills and prove them in form of specialized PAP-001 Exam Bootcamp.

We are confident that our PAP-001 exam study material is the first-class in our market and it's also a good choice for you, On the other hand, using free trial downloading before purchasing, I can promise that you will have a good command of the function of our PAP-001 exam prepare.

One of the best features of Dumpexams Practice PAP-001 Online exam questions is free updates for up to 1 year.
