The results prove that GetValidTest's Deep-Security-Professional dumps work the best. And this is the reason that our Deep-Security-Professional exam questions are gaining wide popularity among the ambitious professionals who want to enhance their workability and career prospects. Our experts have developed them into a specific number of Deep-Security-Professional questions and answers encompassing all the important portions of the exam. They have keenly studied the previous Deep-Security-

Professional Exam Papers and consulted the sources that contain the updated and latest information on the exam contents. The end result of these strenuous efforts is set of Deep-Security-Professional dumps that are in every respect enlightening and relevant to your to actual needs.

Trend Micro Certified Professional for Deep Security Sample Questions (Q72-Q77):

NEW QUESTION # 72

An administrator attempts to activate the Deep Security Agent installed on a server by typing the following command in the Command Prompt on the Deep Security Agent computer:

dsa_control -a dsm://server1.acme.com4120

The Agent does not activate as expected. What is a valid reason for this issue?

- A. The command listed can only be executed from the Command Prompt on the Deep Security Manager computer.
- B. Deep Security Agents can not be activated through the Command Prompt. They must be activated through the Deep Security Manager Web console or through a deployment script.
- C. **"Allow Agent-Initiated Activation" is currently not enabled in Deep Security Manager.**
- D. The incorrect port was used. The correct command would be: dsa_control -a dsm://server1.acme.com4118

Answer: C

Explanation:

dsa_control -a dsm://<host or IP>:<port>/

For the command-line Agent activation option to work, Deep Security Manager must be set to accept Agent-Initiated Activations (AIA) commands. This method is particularly useful when using scripts or in Cloud environments like Amazon Web Services where Deep Security Manager can not typically connect to Deep Security Agents to activate them, but the Agents can connect to Deep Security Manager.

Explication: Study Guide - page (90)

NEW QUESTION # 73

Which of the following statements is true regarding Deep Security Relays?

- A. Deep Security Relays are able to process Deep Security Agent requests during updates.
- B. **Deep Security Agents communicate with Deep Security Relays to obtain security up-dates.**
- C. Deep Security Agents promoted to Deep Security Relays no longer provide the security capabilities enabled by the Protection Modules.
- D. Both 32-bit and 64-bit Deep Security Agents can be promoted to a Deep Security Relay.

Answer: B

NEW QUESTION # 74

Which of the following file types would not be evaluated by the Application Control Protection Module?

- A. .exe files
- B. **.docx files**
- C. .py scripts
- D. .class files

Answer: B

NEW QUESTION # 75

Which of the following Firewall rule actions will allow data packets to pass through the Firewall Protection Module without being subjected to analysis by the Intrusion Prevention Protection Module?

- A. Allow
- B. Deny
- C. **Bypass**

- D. Force Allow

Answer: C

Explanation:

The Bypass action in Deep Security's Firewall module allows specified traffic to skip both Firewall and Intrusion Prevention analysis, resulting in the most efficient possible flow for trusted communications.

Trend Micro Deep Security Administrator's Guide, Firewall Rule Actions Section

NEW QUESTION # 76

Which of the following statements is true regarding the Intrusion Prevention Protection Module?

- A. The Intrusion Prevention Protection Module can prevent applications from executing, allowing an organization to block unallowed software.
- B. The Intrusion Prevention Protection Module can identify changes applied to protected objects, such as the Hosts file, or the Windows Registry.
- C. The Intrusion Prevention Protection Module blocks or allows traffic based on header information within data packets.
- D. **The Intrusion Prevention Protection Module analyzes the payload within incoming and outgoing data packets to identify content that can signal an attack.**

Answer: D

Explanation:
