No website like PassReview can not only provide you with the Best COF-C03 Practice test materials to pass the test, also can provide you with the most quality services to let you 100% satisfaction.

Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q558-Q563):

NEW QUESTION # 558

What is the recommended way to change the existing file format type in my format from CSV to JSON?

- A. ALTER FILE FORMAT my_format SET TYPE=JSON;
- B. REPLACE FILE FORMAT my_format TYPE=JSON;
- C. CREATE OR REPLACE FILE FORMAT my_format TYPE=JSON;
- D. ALTER FILE FORMAT my_format SWAP TYPE WITH JSON;

Answer: A

Explanation:

To change the existing file format type from CSV to JSON, the recommended way is to use the ALTER FILE FORMAT command with the SET TYPE=JSON clause. This alters the file format specification to use JSON instead of CSV. References: Based on my internal knowledge as of 2021.

NEW QUESTION # 559

How does Snowflake recommend handling the bulk loading of data batches from files already available in cloud storage?

- A. Use the INSERT command.
- B. Use the COPY command.
- C. Use an external table.
- D. Use Snowpipe.

Answer: B

Explanation:

Snowflake recommends using the COPY command for bulk loading data batches from files already available in cloud storage. This command allows for efficient and large-scale data loading operations from files staged in cloud storage into Snowflake tables.

NEW QUESTION # 560

What happens to the shared objects for users in a consumer account from a share, once a database has been created in that account?

- A. The shared objects are copied.
- B. The shared objects become accessible.
- C. The shared objects can be re-shared.
- D. The shared objects are transferred.

Answer: B

Explanation:

Once a database has been created in a consumer account from a share, the shared objects become accessible to users in that account. The shared objects are not transferred or copied; they remain in the provider's account and are accessible to the consumer account.

NEW QUESTION # 561

When should a stored procedure be created with caller's rights?

- A. When the caller needs to run a statement that could not execute outside of the stored procedure

- B. When the stored procedure needs to operate on objects that the caller does not have privileges on
- **C. When the stored procedure needs to run with the privileges of the role that called the stored procedure**
- D. When the caller needs to be prevented from viewing the source code of the stored procedure

Answer: C

Explanation:

Stored procedures in Snowflake can be created with either 'owner's rights' or 'caller's rights'. A stored procedure created with caller's rights executes with the privileges of the role that calls the procedure, not the privileges of the role that owns the procedure. This is particularly useful in scenarios where the procedure needs to perform operations that depend on the caller's access permissions, ensuring that the procedure can only access objects that the caller is authorized to access.

NEW QUESTION # 562

Network policies can be applied to which of the following Snowflake objects? (Choose two.)

- **A. Users**
- B. Databases
- C. Warehouses
- **D. Accounts**
- E. Roles

Answer: A,D

Explanation:

Network policies in Snowflake can be applied to users and accounts. These policies control inbound access to the Snowflake service and internal stages, allowing or denying access based on the originating network identifiers¹².
