There are a lot of experts and professors in or company in the field. In order to meet the demands of all people, these excellent experts and professors from our company have been working day and night. They tried their best to design the best FCSS_SASE_AD-24 certification training dumps from our company for all people. By our study materials, all people can prepare for their FCSS_SASE_AD-24 exam in the more efficient method. We can guarantee that our study materials will be suitable for all people and meet the demands of all people, including students, workers and housewives and so on. If you decide to buy and use the FCSS_SASE_AD-24 Training Materials from our company with dedication on and enthusiasm step and step, it will be very easy for you to pass the exam without doubt. We sincerely hope that you can achieve your dream in the near future by the FCSS_SASE_AD-24 latest questions of our company.

Fortinet FCSS_SASE_AD-24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Analytics: This domain evaluates the skills of Data Analysts in utilizing analytics within FortiSASE. It involves identifying potential security threats using traffic logs, configuring dashboards and logging settings, and analyzing reports for user traffic and security issues to enhance overall security posture.
Topic 2	<ul style="list-style-type: none">SIA, SSA, and SPA" This section focuses on the skills of Security Administrators in designing security profiles for content inspection and deploying SD-WAN and Zero Trust Network Access (ZTNA) using SASE. Understanding these concepts is crucial for securing access to applications and data across the network.
Topic 3	<ul style="list-style-type: none">SASE Architecture and Components: This section measures the skills of Network Security Engineers and covers the architecture and components of FortiSASE. It includes integrating FortiSASE into a hybrid network, identifying its components, and constructing deployment cases to effectively implement SASE solutions.

Topic 4

- SASE Deployment: This domain assesses the capabilities of Cloud Security Architects in deploying SASE solutions. It includes implementing various user onboarding methods, configuring administration settings, and applying security posture checks and compliance rules to ensure a secure environment.

No one can beat us in terms of Fortinet FCSS_SASE_AD-24 exam prices. Download the Fortinet FCSS_SASE_AD-24 exam dumps after paying discounted prices and start this journey. You can study FCSS_SASE_AD-24 Exam Engine anytime and anywhere for the convenience our three versions of our FCSS_SASE_AD-24 study questions bring.

Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q20-Q25):

NEW QUESTION # 20

When viewing the daily summary report generated by FortiSASE, the administrator notices that the report contains very little data. What is a possible explanation for this almost empty report?

- A. There are no security profile groups applied to all policies.
- B. The web filter security profile is not set to Monitor.
- C. Digital experience monitoring is not configured.
- **D. Log allowed traffic is set to Security Events for all policies.**

Answer: D

Explanation:

The issue of an almost empty daily summary report in FortiSASE can often be traced back to how logging is configured within the system. Specifically, if "Log Allowed Traffic" is set to "Security Events" for all policies, it means that only security-related events (such as threats or anomalies) are being logged, while normal, allowed traffic is not being recorded. Since most traffic in a typical network environment is allowed, this configuration would result in very little data being captured and subsequently reported in the daily summary.

Here's a breakdown of why the other options are less likely to be the cause:

B. There are no security profile groups applied to all policies: While applying security profiles is important for comprehensive protection, their absence does not directly affect the volume of data in reports unless specific logging settings are also misconfigured.

C. The web filter security profile is not set to Monitor: This option pertains specifically to web filtering activities. Even if web filtering is not set to monitor mode, other types of traffic and logs should still populate the report.

D. Digital experience monitoring is not configured: Digital Experience Monitoring (DEM) focuses on user experience metrics rather than general traffic logging. Its absence would not lead to an almost empty report.

To resolve this issue, administrators should review the logging settings across all policies and ensure that "Log Allowed Traffic" is appropriately configured to capture the necessary data for reporting purposes.

NEW QUESTION # 21

What advantage does customizing dashboard views offer to security analysts using FortiView?

Response:

- A. Reducing the amount of data stored on servers
- B. Displaying unrelated business metrics
- **C. Focusing on specific metrics relevant to ongoing security investigations**
- D. Personalizing the color scheme of the interface

Answer: C

NEW QUESTION # 22

FortiSASE delivers a converged networking and security solution. Which two features help with integrating FortiSASE into an existing network? (Choose two.)

- A. security, orchestration, automation, and response (SOAR)
- B. remote browser isolation (RBI)
- C. SD-WAN
- D. zero trust network access (ZTNA)

Answer: C,D

NEW QUESTION # 23

A customer needs to implement device posture checks for their remote endpoints while accessing the protected server. They also want the TCP traffic between the remote endpoints and the protected servers to be processed by FortiGate.

In this scenario, which three setups will achieve the above requirements? (Choose three.)

- A. Configure ZTNA tags on FortiGate.
- B. Configure private access policies on FortiSASE with ZTNA.
- C. Configure ZTNA servers and ZTNA policies on FortiGate.
- D. Sync ZTNA tags from FortiSASE to FortiGate.
- E. Configure FortiGate as a zero trust network access (ZTNA) access proxy.

Answer: C,D,E

Explanation:

NEW QUESTION # 24

An organization must block user attempts to log in to non-company resources while using Microsoft Office 365 to prevent users from accessing unapproved cloud resources.

Which FortiSASE feature can you implement to achieve this requirement?

- A. Application Control with Inline-CASB
- B. SSL deep inspection
- C. Web Filter with Inline-CASB
- D. Data loss prevention (DLP)

Answer: C

Explanation:

To block user attempts to log in to non-company resources while using Microsoft Office 365, the Web Filter with Inline-CASB feature in FortiSASE is the most appropriate solution. Inline-CASB (Cloud Access Security Broker) provides real-time visibility and control over cloud application usage. When combined with Web Filtering, it can enforce policies to restrict access to unauthorized or non-company resources within sanctioned applications like Microsoft Office 365. This ensures that users cannot access unapproved cloud resources while still allowing legitimate use of Office 365.

Here's why the other options are incorrect:

* B. SSL deep inspection: While SSL deep inspection is useful for decrypting and inspecting encrypted traffic, it does not specifically address the need to block access to non-company resources within Office

365. It focuses on securing traffic rather than enforcing application-specific policies.

* C. Data loss prevention (DLP): DLP is designed to prevent sensitive data from being leaked or exfiltrated. While it is a valuable security feature, it does not directly block access to non-company resources within Office 365.

* D. Application Control with Inline-CASB: Application Control focuses on managing access to specific applications rather than enforcing granular policies within an application like Office 365. Web Filter with Inline-CASB is better suited for this use case.
