

HPE7-A11 Reliable Dumps Files | Latest HPE7-A11 Test Camp

2026 Latest BraindumpStudy HPE7-A11 PDF Dumps and HPE7-A11 Exam Engine Free Share: <https://drive.google.com/open?id=1xNQ0BXflk8VoTnb6EecEWA4BR7JYdv42>

The practice exams (desktop and web-based) are customizable, meaning you can set the HPE Network Campus Access Professional Architect Exam (HPE7-A11) questions and time according to your needs to improve your preparation for the Professional HP HPE7-A11 certification test. You can give multiple practice tests to improve yourself and even access the result of previously given tests from the history to avoid mistakes while taking the HPE Network Campus Access Professional Architect Exam (HPE7-A11) test. The practice tests have been made according to the latest pattern so you can practice in real HPE Network Campus Access Professional Architect Exam (HPE7-A11) exam environment and improve yourself daily.

HP HPE7-A11 Exam Syllabus Topics:

Section	Weight	Objectives
Propose and Validate the Solution	17%	- Present solution and justify design decisions - Create design documentation and executive summary - Validate solution against requirements and constraints
Discover Customer Requirements	23%	- Gather business and technical requirements - Identify constraints, performance, security and scalability needs - Document requirements and stakeholder expectations
Analyze Requirements	30%	- Design wired and wireless topologies - Develop preliminary Bill of Materials (BoM) - Evaluate impact of network technologies and protocols - Map requirements to technical solutions
Architect the Solution	30%	- Plan high availability, redundancy and security - Finalize Bill of Materials and implementation plan - Design overlay and underlay architectures - Select appropriate HPE/Aruba products and technologies

Buy BraindumpStudy HP HPE7-A11 Exam Dumps With Free Updates

If you spare only a few days for exam preparation, our HPE7-A11 learning materials can be your best choice for your time and money. With our HPE7-A11 exam questions, you can not only pass exam in the least time with the least efforts but can also secure a brilliant percentage. And we will find that our HPE7-A11 Study Guide is the most effective exam materials. We can claim that with our HPE7-A11 training engine for 20 to 30 hours, you can pass the exam with ease.

HPE Network Campus Access Professional Architect Exam Sample Questions (Q107-Q112):

NEW QUESTION # 107

Drag and Drop Question

Match the deployment type with the usage scenario.

	Answer Area	
Capacity based design with low to mid density		Basic office/cubicle area with low to medium user density and no voice with limited rf redundancy.
Coverage based design		Coverage, office areas with higher user density OR basic coverage office/cubicle with High Demand users
High-capacity design		High user density indoor space, with high demand users
Very low-density, low coverage		Warehouses, large open areas

Answer:

Explanation:

	Answer Area	
Capacity based design with low to mid density	Capacity based design with low to mid density	Basic office/cubicle area with low to medium user density and no voice with limited rf redundancy.
Coverage based design	Coverage based design	Coverage, office areas with higher user density OR basic coverage office/cubicle with High Demand users
High-capacity design	High-capacity design	High user density indoor space, with high demand users
Very low-density, low coverage	Very low-density, low coverage	Warehouses, large open areas

NEW QUESTION # 108

A global cruise line company needs to refresh its current fleet. They will refresh the 'insides' of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests.

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (980 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft).

Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN infrastructure is based on the 200/300 series indoor and outdoor APs running InstantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security of the wired network infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and

decentral overlay networks.

What would you advise as the most cost-efficient solution?

- A. Standardize on 6200 switches for the access layer, add a cluster of 9240 GWs, and implement central overlay networks on UBT basis.
- **B. Standardize on 6300 switches for the access layer, add a cluster of 9240 GWs, and implement central overlay networks on UBT basis.**
- C. Standardize on 6100 switches for the access layer, add a cluster of 9240 GWs, and implement central overlay networks on UBT basis.
- D. Standardize on 6000 switches for the access layer, add a cluster of 9240 GWs, and implement central overlay networks on UBT basis.

Answer: B

Explanation:

Given the need to increase the security of the wired network infrastructure while being cost-efficient, advising the cruise line company to standardize on Aruba 6300 switches for the access layer is the most appropriate solution. The Aruba 6300 Series offers advanced features suitable for such environments, including high-performance, scalability, and enhanced security capabilities. Adding a cluster of 9240 Gateways for implementing central overlay networks on a User-Based Tunneling (UBT) basis further strengthens the network's security posture. This setup supports dynamic segmentation, which allows for the enforcement of consistent policies and secure access across the network, irrespective of the user or device type. This architecture not only meets the increased security requirements set forth by the cruise line's CSO but also aligns with the company's existing infrastructure and future refresh plans, ensuring cost-efficiency and sustainability.

NEW QUESTION # 109

Drag and Drop Question

You hired a junior engineer to assist you with a large-scale network infrastructure project. The engineer has never worked on such a complex project before and wants to better understand the role that each stakeholder will play in the project.

Match the stakeholder title to the responsibilities that would most likely apply to their role.

Stakeholder Title	Responsibility
CISO	responsible for supporting, troubleshooting, and monitoring the wired/wireless infrastructure
Network Design/Architecture	responsible for investigating IDS/IPS incidents and managing firewalls
Network Operations	responsible for establishing security policy and selecting security controls for the infrastructure.
Security Operations	responsible for authoring the low-level design, and creating the configuration to meet the technical requirements.

Answer:

Explanation:

Stakeholder Title	Responsibility
Network Operations	responsible for supporting, troubleshooting, and monitoring the wired/wireless infrastructure
Security Operations	responsible for investigating IDS/IPS incidents and managing firewalls
CISO	responsible for establishing security policy and selecting security controls for the infrastructure.
Network Design/Architecture	responsible for authoring the low-level design, and creating the configuration to meet the technical requirements.

NEW QUESTION # 110

What are the advantages of using VSX-pair instead of two discrete switches to connect servers, storage, firewalls, and other workloads?

- A. The setup is much easier since both switches are sharing the same configuration.
- **B. Both members in a VSX-pair can be upgraded without any downtime for the workload.**
- C. VMWare-Most can be connected with or without using LACP, regardless of their license.
- D. You can save half the number of licenses needed for AFC.

Answer: B

Explanation:

One of the key advantages of using a Virtual Switching Extension (VSX) pair instead of two discrete switches for connecting servers, storage, firewalls, and other workloads is that both members in a VSX pair can be upgraded without any downtime for the workload (Option C). VSX technology provides advanced high availability features that allow for non-disruptive software upgrades, meaning that one switch in the VSX pair can be upgraded while the other continues to handle network traffic, thereby maintaining continuous operation of the connected workloads.

This seamless failover capability ensures that there is no interruption to the critical services running on the network, making VSX an ideal solution for environments where uptime is paramount.

NEW QUESTION # 111

What is the simple difference between a main distribution framework (MDF) closet and an intermediate distribution framework (IDF) closet?

- A. MDF is a term used in Europe whereas the Americas refer to all network closets as IDFs in their documentation.
- B. MDFs only connect to other MDFs, and IDFs only connect to other IDFs.
- **C. MDF is the point where traffic egresses the campus network, and IDFs distribute that connectivity throughout the building.**
- D. MDFs always have larger rooms than IDFs.

Answer: C

Explanation:

In network design, the Main Distribution Frame (MDF) and Intermediate Distribution Frame (IDF) are critical components of the network infrastructure. The MDF is the primary hub of the network, often where services from outside the campus or building enter and get distributed. It acts as a central point for network distribution. On the other hand, IDFs are secondary hubs situated throughout the building or campus, extending connectivity provided by the MDF to various endpoints or areas within the building. The simple difference between them lies in their roles within the network infrastructure: the MDF serves as the main point of network ingress and egress, while IDFs are used to further distribute the network to specific locations or floors within the building.

NEW QUESTION # 112

.....

New developments in the tech sector always bring new job opportunities. These new jobs have to be filled with the HPE7-A11 certification holders. So to fill the space, you need to pass the HPE7-A11 Exam. Earning the HPE7-A11 certification helps you clear the obstacles you face while working in the HP field.
