

# Pass Guaranteed 2026 JN0-336: Valid Security, Specialist (JNCIS-SEC) Exam Pattern

New developments in the tech sector always bring new job opportunities. These new jobs have to be filled with the JN0-336 certification holders. So to fill the space, you need to pass the JN0-336 Exam. Earning the JN0-336 certification helps you clear the obstacles you face while working in the Juniper field.

Our company has dedicated ourselves to develop the JN0-336 latest practice materials for all candidates to pass the exam easier, also has made great achievement after more than ten years' development. As the certification has been of great value, a right JN0-336 exam guide can be your strong forward momentum to help you pass the JN0-336 Exam like a hot knife through butter. And our JN0-336 exam questions are exactly the right one for you as our high quality of JN0-336 learning guide is proved by the high pass rate of more than 98%.

## 2026 Juniper Updated Valid JN0-336 Exam Pattern

Closed cars will not improve, and when we are reviewing our qualifying examinations, we should also pay attention to the overall layout of various qualifying examinations. For the convenience of users, our Security, Specialist (JNCIS-SEC) learn materials will be timely updated information associated with the qualification of the home page, so users can reduce the time they spend on the Internet, blindly to find information. Our JN0-336 Certification material get to the exam questions can help users in the first place, and what they care about the test information, can put more time in learning a new hot spot content. Users can learn the latest and latest test information through our JN0-336 test dumps. What are you waiting for?

## Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q41-Q46):

### NEW QUESTION # 41

A client has attempted communication with a known command-and-control server and it has reached the configured threat level threshold.

Which feed will the clients IP address be automatically added to in this situation?

- A. the allowlist and blocklist feed
- B. the infected host cloud feed
- C. the custom cloud feed
- D. the command-and-control cloud feed

### Answer: B

Explanation:

Infected hosts are internal hosts that have been compromised by malware and are communicating with external C&C servers<sup>3</sup>. Juniper ATP Cloud provides infected host feeds that list internal IP addresses or subnets of infected hosts along with a threat level<sup>3</sup>. Once the Juniper ATP Cloud global threshold for an infected host is met, that host is added to the infected host feed and assigned a threat level of 10 by the cloud<sup>4</sup>. You can also configure your SRX Series device to block traffic from these IP addresses using security policies<sup>4</sup>.

### NEW QUESTION # 42

You need to deploy an SRX Series device in your virtual environment. In this scenario, what are two benefits of using a cSRX? (Choose two.)

- A. The cSRX default configuration contains three default zones: trust, untrust, and management.
- B. The cSRX supports firewall, NAT, IPS, and UTM services.
- C. The cSRX supports Layer 2 and Layer 3 deployments.
- D. The cSRX has low memory requirements.

**Answer: B,D**

Explanation:

Two benefits of using a cSRX in your virtual environment are:

The cSRX supports firewall, NAT, IPS, and UTM services: The cSRX is a containerized version of the SRX Series firewall that runs as a Docker container on Linux hosts. It provides the same features and functionality as the SRX Series physical firewalls, such as firewall, NAT, IPS, and UTM services. The cSRX can protect your virtual workloads and applications from various threats and attacks.

The cSRX has low memory requirements: The cSRX is designed to be lightweight and efficient, with low memory and CPU requirements. The cSRX can run on as little as 1 GB of RAM and 1 vCPU, making it suitable for resource-constrained environments. Reference: = cSRX Overview, cSRX Container Firewall Datasheet

**NEW QUESTION # 43**

You are asked to implement IPS on your SRX Series device.

In this scenario, which two tasks must be completed before a configuration will work? (Choose two.)

- A. **Install the IPS signature database.**
- B. Enroll the SRX Series device with Juniper ATP Cloud.
- C. **Download the IPS signature database.**
- D. Reboot the SRX Series device.

**Answer: A,C**

Explanation:

The two tasks that must be completed before a configuration for IPS on an SRX Series device will work are downloading the IPS signature database and installing the IPS signature database. The Security, Specialist (JNCIS-SEC) Study guide provides further information on how to download and install the IPS signature database. Enrolling the SRX Series device with Juniper ATP Cloud is not necessary to make a configuration work, and rebooting the SRX Series device is not required either.

**NEW QUESTION # 44**

Which two statements about SRX Series device chassis clusters are true? (Choose two.)

- A. Redundancy group 0 is only active on the cluster backup node.
- B. **Each chassis cluster member device can host active redundancy groups**
- C. **Chassis cluster member devices must be the same model.**
- D. Each chassis cluster member requires a unique cluster ID value.

**Answer: B,C**

Explanation:

In a chassis cluster, both nodes can host active redundancy groups. The active redundancy groups can be distributed between the two nodes, depending on the configuration and failover status, allowing each node to handle traffic for different sets of services or interfaces.

For the chassis clustering to function correctly, both nodes in the cluster must be of the same model.

This requirement ensures that the hardware capabilities, such as processing power and interface compatibility, are identical, which is crucial for maintaining consistent performance and behavior between cluster nodes.

**NEW QUESTION # 45**

You want to control when cluster failovers occur.

In this scenario, which two specific parameters would you configure on an SRX Series device? (Choose two.)

- A. heartbeat-address
- B. heartbeat-cos
- C. **heartbeat-threshold**
- D. **heartbeat-interval**

**Answer: C,D**

## Explanation:

To control when cluster failovers occur, you need to configure two specific parameters on an SRX Series device: heartbeat-interval and heartbeat-threshold. These parameters determine how often the nodes in a cluster exchange heartbeat messages and how many consecutive heartbeats can be missed before a failover is triggered. The heartbeat-interval specifies the time interval in seconds between each heartbeat message. The default value is 1 second and the range is from 0.1 to 10 seconds. The heartbeat-threshold specifies the number of consecutive heartbeats that must be missed before a failover occurs.

The default value is 3 and the range is from 2 to 255.

## NEW QUESTION # 46

.....

Clients always wish that they can get immediate use after they buy our JN0-336 test questions because their time to get prepared for the JN0-336 exam is limited. Our JN0-336 test torrent won't let the client wait for too much time and the client will receive the mails in 5-10 minutes sent by our system. Then the client can log in and use our software to learn immediately. It saves the client's time. And only studying with our JN0-336 Exam Questions for 20 to 30 hours, you can confidently pass the JN0-336 exam for sure.
