

HOT Updated C_ACDET_2506 Demo - The Best SAP C_ACDET_2506 Pass Test: SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite

P.S. Free 2026 SAP C_ACDET_2506 dumps are available on Google Drive shared by Exam-Killer:
<https://drive.google.com/open?id=1bnLHL3yHtqTwkBs-bkFeDkGt2cfyg--G>

The competition in IT industry is increasingly intense, so how to prove that you are indispensable talent? To pass the C_ACDET_2506 certification exam is persuasive. What we can do for you is to let you faster and more easily pass the C_ACDET_2506 Exam. Our Exam-Killer have owned more resources and experiences after development for years. Constant improvement of the software also can let you enjoy more efficient review process of C_ACDET_2506 exam.

Almost no one likes boring study. Teachers and educationist have tried many ways to solve this problem. Arousing the interest might be the most effective method. So our company is focused on reforming preparation ways of the C_ACDET_2506 exam. Rigid memory is torturous and useless. Our C_ACDET_2506 Study Materials combine the knowledge with the new technology, which could greatly inspire your motivation. And if you click on our C_ACDET_2506 practice questions, you will feel the convenience.

SAP C_ACDET_2506 exam practice questions and answers

We can proudly claim that you can successfully pass the exam just on the condition that you study with our C_ACDET_2506 preparation materials for 20 to 30 hours. And not only you will get the most rewards but also you will get an amazing study experience by our C_ACDET_2506 Exam Questions. For we have three different versions of our C_ACDET_2506 study guide, and you will have different feelings if you have a try on them.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 3	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q56-Q61):

NEW QUESTION # 56

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. Contact an SAP Deployment lead for customization help.
- B. User with Partner Administrator can configure translation.
- **C. Translations are included in migrations and are listed as AMLStringResource in the migration UI.**
- D. Create a package to migrate translations by ICM.

Answer: C

Explanation:

In Greenfield deployments, translations for custom field labels, help tips, and validation/error messages are migrated as part of the configuration migration package and are represented in the migration UI as AMLStringResource entries. This structured approach ensures all language-specific content is consistently moved alongside configuration settings.

While administrators and deployment leads may support translation tasks, the migration of translation strings is managed automatically via this AML-based mechanism, not through manual reconfiguration or separate ICM packages.

This ensures a seamless multilingual user experience immediately upon go-live without requiring additional manual translation imports.

NEW QUESTION # 57

Which of the following can be used to define relation types and establish a custom relationship? (Select 2 correct answers)

- A. A custom Enumeration such as Contracts_Contract_Type
- **B. A standard class such as ariba.basic.core.CommodityCode**
- **C. A custom Flex Master Data Template such as vrealm_1936.fmd_58984.Hospital**
- D. A custom Form Template such as vrealm_1936.formDoc_18697.LessonsLearned

Answer: B,C

Explanation:

In SAP Ariba, relation types can be defined using custom Flex Master Data (FMD) templates and standard classes such as ariba.basic.core.CommodityCode. These define valid relationships between fields, allowing dependent picklists or filtering logic in forms. Custom enumerations are static lists and are not used to establish dynamic relations, and custom form templates are for form

layouts and do not define data relationships.

NEW QUESTION # 58

Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- A. User to Group Mapping
- B. Enumerations
- C. Relation and Relation Entries
- D. Units of Measure

Answer: B,C

Explanation:

After migrating configurations using ICM, Enumerations and Relation entries require manual loading into Production because they are not included in automatic migration bundles. Enumerations provide picklist values, while Relations define dependencies between fields. Units of Measure are typically part of standard configuration or migrated automatically. User to Group Mapping is managed separately through provisioning or identity management tools, not via ICM. Manual loading of these data elements ensures data integrity and avoids missing references.

NEW QUESTION # 59

Which key technical activities occur during the Deploy phase? Note: There are 3 correct answers to this question.

- A. Migration to production
- B. Rebuild all custom header fields in production
- C. Execute change management plans
- D. Go-live
- E. Apply the bundle in production

Answer: A,D,E

NEW QUESTION # 60

When you create a custom field, how do you define where the field is added?

- A. The field is added to a class, identified by a class name
- B. Each field can be linked to multiple screens, identified via UI GroupClass ID
- C. The field is added to a class, identified by the record ID
- D. The field is added to a project header, identified by the templateClass ID

Answer: A

Explanation:

In SAP Ariba, custom fields are associated with a specific class identified by its class name, such as ContractWorkspace or ProcureLineItem. This class-level association determines where the field is available within the application. When added to a parent class, the field inherits to all its subclasses, affecting all relevant data objects. The field is not linked via UI group IDs, project templates, or record IDs, which relate to different configuration aspects. This class-based design supports consistent data models and inheritance in SAP Ariba's architecture.
