Candidates who pass the exam will be able to demonstrate their ability to design, implement, and manage security controls in Microsoft Azure environments.

Microsoft Azure Security Technologies Sample Questions (Q280-Q285):

NEW QUESTION # 280

You have an Azure subscription that contains a storage account named storage1 and several virtual machines. The storage account and virtual machines are in the same Azure region. The network configurations of the virtual machines are shown in the following table.

☐ The virtual network subnets have service endpoints defined as shown in the following table.

☐ You configure the following Firewall and virtual networks settings for storage1:

Allow access from: Selected networks

Virtual networks: VNET3/Subnet3

Firewall - Address range: 52.233.129.0/24

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
VM1 can connect to storage1.	<input type="radio"/>	<input type="radio"/>
VM2 can connect to storage1.	<input type="radio"/>	<input type="radio"/>
VM3 can connect to storage1.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

NEW QUESTION # 281

You have an Azure subscription named Sub1 that is associated to an Azure Active Directory (Azure AD) tenant named contoso.com.

You plan to implement an application that will consist of the resources shown in the following table.

Users will authenticate by using their Azure AD user account and access the Cosmos DB account by using resource tokens.

You need to identify which tasks will be implemented in CosmosDB1 and WebApp1.

Which task should you identify for each resource? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 283

You have an Azure subscription that contains an Azure SQL Database logic server named SQL1 and an Azure virtual machine named VM1. VM1 uses a private IP address only.

The Firewall and virtual networks settings for SQL1 are shown in the following exhibit.

You need to ensure that VM1 can connect to SQL1. The solution must use the principle of least privilege.

What should you do?

- Answer: C**
