

Latest 3V0-21.25 Training Materials offer you accurate Latest Exam Pdf | Advanced VMware Cloud Foundation 9.0 Automation

P.S. Free & New 3V0-21.25 dumps are available on Google Drive shared by ITExamDownload: <https://drive.google.com/open?id=1zjvumGwHRmuXjiNCsD6--k6lou4ubjA>

If you buy our 3V0-21.25 training quiz, you will find three different versions are available on our test platform. According to your need, you can choose the suitable version for you. The three different versions of our 3V0-21.25 Study Materials include the PDF version, the software version and the APP online version. We can promise that the three different versions of our 3V0-21.25 exam questions are equipped with the high quality.

Are you in the condition that you want to make progress but you don't know how to and you are a little lost in the preparation. Perhaps you need help with our 3V0-21.25 preparation materials. A good product, the most important thing is to seize the user's most concerned part. We can tell you that 99% of those who use our 3V0-21.25 Exam Questions have already got the certificates they want and they all lead a better life now. Just buy our 3V0-21.25 training braindumps, then you will succeed as well!

Latest 3V0-21.25 Exam Pdf, 3V0-21.25 Latest Exam Papers

You can contact our service any time as long as you have questions on our 3V0-21.25 practice engine. They are available 24-hours for guidance and information to help you solve your problem or confusion on the 3V0-21.25 exam braindumps. And they can also give you the fast and professional help as they are trained to deal with matters with high-efficiency on our 3V0-21.25 learning guide. And if you buy our 3V0-21.25 training materials, you will find you can have it in 5 to 10 minutes.

VMware 3V0-21.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Operation Management: This section focuses on monitoring and managing operational aspects of VMware Cloud Foundation Automation. It includes using VMware operations tools to monitor automation services, provider management, and organizational environments.
Topic 2	<ul style="list-style-type: none">• IT Architectures, Technologies, Standards: This section focuses on understanding fundamental IT architectures, technologies, and industry standards that support VMware Cloud Foundation environments. It ensures candidates understand the foundational concepts required to design and manage automated cloud infrastructure solutions.

Topic 3	<ul style="list-style-type: none"> VMware Products and Solutions: This section covers VMware products related to VMware Cloud Foundation Automation, particularly components such as vSphere Supervisor and supervisor-based NSX networking. It focuses on identifying and differentiating architectural components and how they function within a deployment.
Topic 4	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware Solution: This section covers configuring and administering VMware Cloud Foundation Automation environments. It includes managing provider portals, organizations, integrations, governance policies, resource deployments, automation workflows, blueprints, and orchestrator components.
Topic 5	<ul style="list-style-type: none"> Plan and Design the VMware Solution: This section focuses on designing VMware Cloud Foundation Automation environments based on business and technical requirements. It includes understanding tenancy deployment models, organization types, and the functional components used to structure and manage cloud resources.

VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q40-Q45):

NEW QUESTION # 40

An administrator is tasked to implement a GitOps workflow to manage VMware Cloud Foundation (VCF) Automation blueprints and infrastructure deployment.

Which statement describes VCF Automation support for this use case?

- A. Provides version synchronization from a Git repository, enabling declarative infrastructure management and version control.
- B. Provides native management of ArgoCD instances, GitOps pipelines, and triggering of GitOps deployments directly from the VCFA UI.
- C. Supports export of YAML descriptions of deployed infrastructure and committing the results back to a Git repository for drift detection and rollback.
- D. Supports continuous monitoring of Git repositories and automatic application of changes to running deployments.

Answer: A

Explanation:

VCF 9.0 Automation natively supports GitOps methodologies by providing version synchronization with Git-based repositories (such as GitHub, GitLab, or Bitbucket). This integration allows administrators and developers to treat infrastructure as code (IaC) by storing blueprints (Cloud Templates) as YAML files in a version-controlled environment. The platform can be configured to periodically sync with the repository, ensuring that the latest "released" versions in Git are automatically available in the VCF Automation service catalog. This enables a declarative management model where changes to infrastructure are proposed via Pull Requests, peer-reviewed, and then synchronized to the private cloud environment. While it facilitates the lifecycle of the templates, it is primarily a synchronization engine (Option A) rather than a full-scale CD tool like ArgoCD or a real-time "auto-apply" engine for running instances, providing the necessary balance between developer flexibility and operational governance.

NEW QUESTION # 41

A VMware Cloud Foundation (VCF) Automation Administrator is tasked to enable VCF Automation with the following requirements:

- * All companies are hosted within a single private cloud.
- * RBAC (role-based access control) is enforced.
- * Resource governance within companies.
- * Segregation between companies.

What two actions must the VCF Automation Administrator perform to satisfy the requirements? (Choose two.)

- A. Ensure that the vCenter instance has a Supervisor cluster enabled.
- B. Create and configure a VMApps Organization per company.
- C. Deploy a vCenter instance with a Supervisor cluster per company.
- D. Create and configure an AllApps Organization per company.
- E. Deploy a VCF Operations Orchestrator server to enable multi-tenancy.

Answer: A,B

Explanation:

In VMware Cloud Foundation 9.0, multi-tenancy is structured around the concept of Organizations. To meet the requirement of hosting multiple companies within a single private cloud with strict segregation and governance, the administrator must utilize the VMApps Organization model. Unlike the AllApps model, which is highly optimized for modern containerized and VPC-driven workloads, the VMApps Organization is specifically designed for environments requiring traditional VM-centric segregation and access control while sharing underlying physical infrastructure. Enabling a Supervisor cluster on the vCenter instance is a foundational prerequisite for these advanced automation capabilities. The Supervisor provides the necessary integration between the vSphere compute layer and the VCF Automation control plane, allowing for the instantiation of the Namespace and Organization constructs that enforce RBAC and resource quotas. By configuring a VMApps Organization per company, the administrator ensures that each tenant has a distinct administrative boundary, private catalog, and isolated resource allocation, effectively satisfying the requirements for hard tenancy within a consolidated private cloud environment.

NEW QUESTION # 42

An administrator has been tasked with configuring tenant branding with the following requirements:

* Organization branding should only appear when a user has logged in to the organization portal.

Select the three steps involved in configuring branding. (Choose three.)

- A. Enable the Enable Login and Logout Page Branding setting.
- B. Log into the Provider Management Portal.
- C. Log into the Organization Portal.
- D. Disable the Enable Login and Logout Page Branding setting.
- E. Import a branding theme.
- F. Navigate to Branding.

Answer: C,D,F

Explanation:

In VMware Cloud Foundation 9.0, branding is managed within the Organization Portal to allow for tenant-specific customization. To meet the specific requirement that branding only appears after a user has authenticated, the administrator must navigate to the Branding section of the portal. The critical configuration step is to Disable the Enable Login and Logout Page Branding setting. By default, if this is enabled, the custom logos and colors are displayed on the public-facing login screen. Disabling it ensures that the generic VCF/Broadcom login page is presented to the public, and the custom tenant identity is only loaded into the browser session once the user's organization context is established through successful login. This is a common requirement for service providers who want to maintain a consistent entry point for all users while providing a personalized "white-labeled" experience once the user is inside their specific environment.

NEW QUESTION # 43

In VMware Cloud Foundation (VCF) Automation, which two statements identify the relationship between a storage policy and a region? (Choose two.)

- A. Regions automatically create storage policies based on cluster configuration.
- B. Regions can only use the default vSphere storage policy.
- C. Storage policies determine which datastores are available in a region.
- D. Storage policies must be replicated across all regions using the VCF Automation REST API.
- E. A storage policy can be associated with one or more regions.

Answer: C,E

Explanation:

In VCF 9.0, the Region construct acts as the bridge between physical vSphere infrastructure and the logical automation consumption layer. Storage policies (SPBM) are used to abstract the underlying physical datastores (such as vSAN, VMFS, or vVOLs). A region identifies which storage policies are available for consumption by the tenant organizations mapped to it. Consequently, storage policies determine which datastores are available within a region; if a datastore is not associated with a policy selected during region configuration, it cannot be used for workload placement. Furthermore, a storage policy can be associated with one or more regions. This allows a provider to offer standardized "Gold," "Silver," or "Bronze" storage tiers across different geographic or logical regions of the VCF fleet, ensuring a consistent consumption experience for developers regardless of which physical workload domain their virtual machines or Kubernetes pods are deployed into.

NEW QUESTION # 44

An administrator needs to configure a connection between VMware Cloud Foundation (VCF) Automation and an external system to enable the exchange of data for extensibility purposes.

Which two integration types are supported for this purpose? (Choose two.)

- A. VCF Operations Orchestrator
- B. VMware Live Recovery
- C. Action-Based Extensibility (ABX)
- D. vSphere Lifecycle Manager
- E. VMware Cloud Foundation SDDC Manager

Answer: A,C

Explanation:

VCF 9.0 Automation provides two primary "engines" for extensibility and external system integration. VCF Operations Orchestrator is the robust, long-standing workflow engine designed for complex, multi-step orchestration across heterogeneous infrastructure. It supports extensive plugin libraries for third-party systems like ServiceNow, Infoblox, or custom REST/SOAP endpoints. Action-Based Extensibility (ABX) is the modern, serverless alternative that allows administrators to execute lightweight scripts (Python, Node.js, or PowerShell) directly within the VCF Automation framework. ABX is ideal for quick, specific tasks such as calling a web hook or performing a simple API transformation during the provisioning lifecycle. While SDDC Manager (Option D) and vSphere Lifecycle Manager (Option E) are core components of the VCF stack for management and patching, they are not used as extensibility "integrations" for data exchange in the context of automation workflows.

NEW QUESTION # 45

.....

When you purchase our 3V0-21.25 exam materials, we have installed the most advanced operation machines in our website. If you buy the 3V0-21.25 practice test on our web, and after purchasing, it only takes 5 to 10 minutes before our operation system sending our 3V0-21.25 Study Materials to your email address, that is to say, with our advanced operation system of our 3V0-21.25 study guide, there is nothing that you need to worry about, we can ensure you the fastest delivery on the 3V0-21.25 training guide.
