NEW QUESTION # 159

You have been tasked with designing a data center interconnect to provide business continuity. You want to encrypt the traffic over the DCI using IEEE 802.1AE MACsec to prevent the deployment of any firewall or IPS. Which two interconnect technologies support MACsec? (Choose two.)

- A. EoMPLS
- B. KVPLS
- C. DMVPN
- D. GET VPN
- E. MPLS Layer 3 VPN

Answer: A,B

Explanation:

- * A (EoMPLS): Ethernet over MPLS can operate at Layer 2, and MACsec can encrypt traffic before entering the MPLS core.
- * E (KVPLS): Supports MACsec encryption for Layer 2 DCI services over VPLS solutions.

Why other options are incorrect:

- * B: MPLS L3 VPN operates at Layer 3, not suitable for MACsec (L2 encryption).
- * C: DMVPN uses IPsec, not MACsec.
- * D: GET VPN uses IPsec for L3 traffic encryption.

NEW QUESTION # 160

An existing wireless network was designed to support data traffic only. You must now install context-aware services for location tracking. What changes must be applied to the existing wireless network to increase the location accuracy? (Choose two)

- A. Use directional antennas to provide more cell overlapping.
- B. Increase the access point density to create an average inter-access point distance of less than 40 feet or 12.2 meters.
- C. Install additional access points in monitor mode where the co-channel interference would otherwise be affected.
- D. Fine tune the radio configuration of the access point to have a higher average transmission power to achieve better coverage.
- E. Add access points along the perimeter of the coverage area.

Answer: B,E

Explanation:

For accurate location tracking in wireless networks, signal triangulation methods like RSSI, TDoA, or Angle of Arrival require:

* A (Perimeter coverage): Adding APs along the perimeter improves location accuracy by minimizing blind spots and improving triangulation geometry.

* B (Higher density, <40 ft spacing): Reducing inter-AP distance increases overlapping coverage, which provides more data points for accurate positioning.

Other options explained:

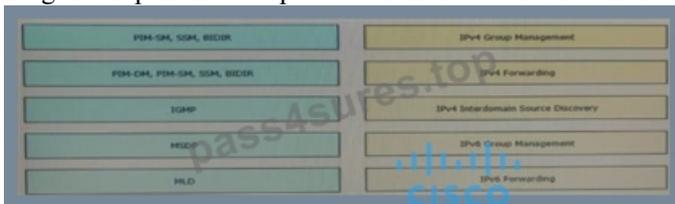

* C: Directional antennas limit overlapping coverage, reducing triangulation accuracy.

* D: Monitor mode APs can assist in location services but are secondary to proper placement and density.

* E: Increasing transmit power may enlarge cell size but can decrease accuracy by reducing overlapping AP zones.
