

# Exam NSE5\_SSE\_AD-7.6 Vce Format & NSE5\_SSE\_AD-7.6 Latest Test Bootcamp

P.S. Free 2026 Fortinet NSE5\_SSE\_AD-7.6 dumps are available on Google Drive shared by Itcertkey:  
[https://drive.google.com/open?id=11QXKpc\\_2xU392vy9RWiCZAhf1aaF0nfv](https://drive.google.com/open?id=11QXKpc_2xU392vy9RWiCZAhf1aaF0nfv)

Our company is a professional certificate exam materials provider. We offer candidates high quality questions and answers for the NSE5\_SSE\_AD-7.6 exam bootcamp, and they can pass the exam through learning and practicing the materials. You can get the NSE5\_SSE\_AD-7.6 Exam Bootcamp about ten minutes after your payment, and if you have any questions about the NSE5\_SSE\_AD-7.6 exam dumps, you can notify us by email or you can chat with our online chat service.

## Fortinet NSE5\_SSE\_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Decentralized SD-WAN: This domain covers basic SD-WAN implementation including configuring members, zones, and performance SLAs to monitor network quality.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Analytics: This domain covers analyzing SD-WAN and FortiSASE logs to monitor traffic behavior, identify security threats, and generate reports.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Secure Internet Access (SIA) and Secure SaaS Access (SSA): This section focuses on implementing security profiles for content inspection and deploying compliance rules to managed endpoints.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>SASE Deployment: This domain covers FortiSASE administration settings, user onboarding methods, and integration with SD-WAN infrastructure.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Rules and Routing: This section addresses configuring SD-WAN rules and routing policies to control and direct traffic flow across different links.</li></ul>

## Updated Exam NSE5\_SSE\_AD-7.6 Vce Format for Real Exam

Our reliable NSE5\_SSE\_AD-7.6 question dumps are developed by our experts who have rich experience in the fields. Constant updating of the NSE5\_SSE\_AD-7.6 prep guide keeps the high accuracy of exam questions thus will help you get use the NSE5\_SSE\_AD-7.6 Exam quickly. During the exam, you would be familiar with the questions, which you have practiced in our NSE5\_SSE\_AD-7.6 question dumps. That's the reason why most of our customers always pass exam easily.

### Fortinet NSE 5 - FortiSASE and SD-WAN 7.6 Core Administrator Sample Questions (Q37-Q42):

#### NEW QUESTION # 37

You want FortiGate to use SD-WAN rules to steer local-out traffic.

Which two constraints should you consider? (Choose two.)

- A. By default, FortiGate uses SD-WAN rules only for local-out traffic that corresponds to ping and traceroute.
- B. By default, local-out traffic does not use SD-WAN.
- C. You must configure each local-out feature individually to use SD-WAN.
- D. You can steer local-out traffic only with SD-WAN rules that use the manual strategy.

Answer: B,C

Explanation:

By default, local-out traffic does not use SD-WAN → FortiGate normally sends local-out traffic (e.g., DNS, NTP, FortiGuard updates) directly through its interfaces without applying SD-WAN rules.

You must configure each local-out feature individually to use SD-WAN → To steer local-out traffic via SD-WAN, you must explicitly configure the desired local-out features (e.g., DNS, FortiGuard, CAPWAP) to use SD-WAN rules.

#### NEW QUESTION # 38

Refer to the exhibits.

#### Routing Table on FortiGate

```
branch1_fgt # get router info routing-table all
Codes: K - kernel, C - connected, S - static, R - RIP, B - BGP
       O - OSPF, IA - OSPF inter area
       N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
       E1 - OSPF external type 1, E2 - OSPF external type 2
       I - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
       * - candidate default

Routing table for VRF=0
**
```

The administrator increases the member priority on port2 to 20. Upon configuration changes and the receipt of new packets, which two actions does FortiGate perform on existing sessions established over port2?

(Choose two.)

- A. FortiGate updates the gateway information of the sessions with SNAT so that they use port1 instead of port2.
- B. FortiGate routes only new sessions over port1.
- C. FortiGate flags the sessions as dirty.
- D. FortiGate flags the SNAT session as dirty only if the administrator has assigned an IP pool to the firewall policies with NAT.
- E. FortiGate continues routing all existing sessions over port2.

Answer: A,C

#### NEW QUESTION # 39

Refer to the exhibit. You configure SD-WAN on a standalone FortiGate device. You want to create an SD-WAN rule that steers traffic related to Facebook and LinkedIn through the less costly internet link.

What must you do to set Facebook and LinkedIn applications as destinations from the GUI?

The screenshot shows the FortiGate SD-WAN rule configuration interface. The rule name is 'Social\_app' and its status is 'Enabled'. Under the 'Source' section, the address is '4 LAN-net'. Under the 'Destination' section, the 'Internet service' field is highlighted in yellow, indicating it is the selected destination for the rule. The 'Interface selection strategy' is set to 'Manual'.

- A. Install a license to allow applications as destinations of SD-WAN rules.
- B. Enable the visibility of the applications field as destinations of the SD-WAN rule.
- C. In the Internet service field select Facebook and LinkedIn.
- D. You cannot configure applications as destinations of an SD-WAN rule on a standalone FortiGate device.

**Answer: C**

Explanation:

In an SD-WAN rule, you can steer application traffic by using Internet Service Database (ISDB) entries. Facebook and LinkedIn are predefined ISDB objects in FortiGate, so the correct way is to select them in the Internet service field under Destination. This ensures that all traffic to these applications is matched and routed through the chosen (less costly) link.

#### NEW QUESTION # 40

Which two statements correctly describe what happens when traffic matches the implicit SD-WAN rule? (Choose two.)

- A. FortiGate flags the session with `may_dirty` and `vwf_default`.
- B. The session information output displays no SD-WAN service id.
- C. The traffic is distributed, regardless of weight, through all available static routes.
- D. Traffic does not match any of the entries in the policy route table.
- E. Traffic is load balanced using the algorithm set for the `v4-ecmp-mode` setting.

**Answer: A,B**

Explanation:

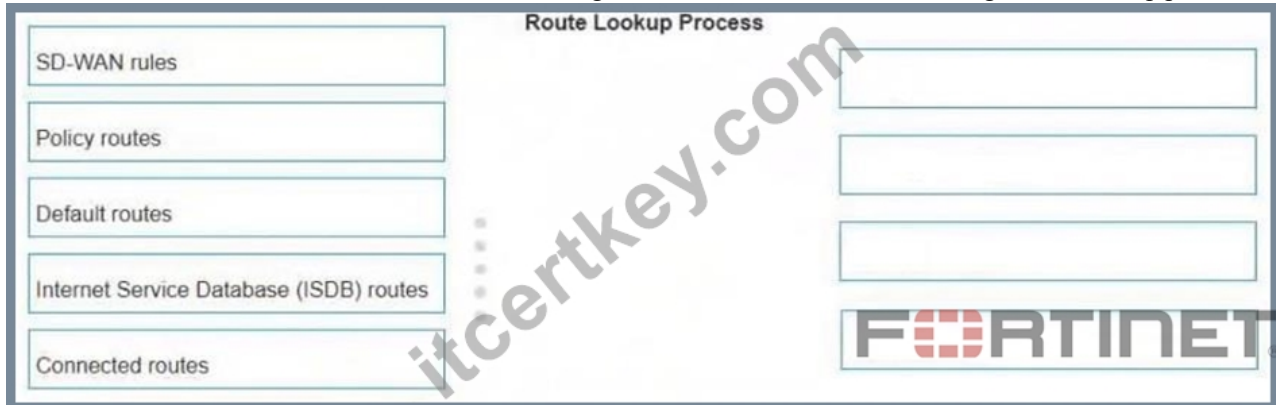

When traffic matches the implicit SD-WAN rule, the session is flagged with `may_dirty` and `vwl_default`, indicating it was steered by the default SD-WAN behavior.

Because the implicit rule is used, no specific SD-WAN service is matched, so the session information shows no SD-WAN service ID.

#### NEW QUESTION # 41

Drag and Drop

In which order does a FortiGate device consider the following elements shown in the left column during the route lookup process?

The diagram titled "Route Lookup Process" shows a list of route types on the left and empty boxes on the right for ordering. The left column contains: SD-WAN rules, Policy routes, Default routes, Internet Service Database (ISDB) routes, and Connected routes. The right column has five empty boxes for drag-and-drop, with a Fortinet logo at the bottom right.

Answer:

Explanation:

The diagram shows the correct order of route lookup: Policy routes, SD-WAN rules, Connected routes, and Internet Service Database (ISDB) routes. The "Default routes" box is shown in a separate, lower position, indicating it is the final step in the process.

Explanation:

1. Policy routes
2. SD-WAN rules
3. Connected routes
4. Internet Service Database (ISDB) routes

FortiGate evaluates routes in a hierarchical order. It first checks policy routes, then SD-WAN rules if enabled. After that, it evaluates connected routes, followed by ISDB routes for Internet services, and finally default routes if no more specific match exists.

#### NEW QUESTION # 42
