## HP HPE7-A01 Practice Questions

### Aruba Certified Campus Access Professional Exam

Order our HPE7-A01 Practice Questions Today and Get Ready to Pass with Flying Colors!

### HPE7-A01 Practice Exam Features | QuestionsTube

- Latest & Updated Exam Questions
- Subscribe to FREE Updates
- Both PDF & Exam Engine
- Download Directly Without Waiting

<https://www.questiontube.com/exam/hpe7-a01/>

At QuestionsTube, you can read HPE7-A01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the HP HPE7-A01 practice questions. These free demo questions are parts of the HPE7-A01 exam questions. Download and read them carefully, you will find that the HPE7-A01 test questions of QuestionsTube will be your great learning materials online. Share some HPE7-A01 exam online questions below.

1.What is true regarding 802.11k?

2026 Latest GuideTorrent HPE7-A01 PDF Dumps and HPE7-A01 Exam Engine Free Share: <https://drive.google.com/open?id=16Pmt3S90XEbl4p7TU7l-XbIkYwIY811U>

Our HPE7-A01 study guide design three different versions for all customers. These three different versions of our HPE7-A01 exam questions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our HPE7-A01 Exam Torrent provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our HPE7-A01 learning materials are practicality.

A lot of students have used our product and prepared successfully for the test. Every user has rated study material positively and passed the HPE7-A01 Exam. GuideTorrent gives a guarantee to the customers that if they fail to pass the Aruba Certified Campus Access Professional Exam (HPE7-A01) certification on the very first try despite all their efforts they can claim their money back according to terms and conditions. A team of experts is working day and night in order to make the product successful day by day and provide the customers with the best experience.

## HPE7-A01 Free Updates, Latest HPE7-A01 Dumps Ppt

The GuideTorrent is committed to making the entire Aruba Certified Campus Access Professional Exam (HPE7-A01) exam preparation journey simple, smart, and successful. To achieve this objective the GuideTorrent is offering the top-rated and updated

Aruba Certified Campus Access Professional Exam (HPE7-A01) exam practice test questions in three different formats. These formats are HP HPE7-A01 web-based practice test software, desktop practice test software, and PDF dumps files.

## HP Aruba Certified Campus Access Professional Exam Sample Questions (Q23-Q28):

### NEW QUESTION # 23

A customer has a large number of food-producing machines:

- All machines are connected via Aruba CX6200 switches in VLANs 100, 110, and 120
- Several external technicians are maintaining this special equipment

What are the correct commands to ensure that no rogue DHCP server will impact the network?

- A.
- B.
- C.
- D.

**Answer: C**

Explanation:

Configures DHCP snooping on the switch and enables it for VLANs 100, 110, and 120. It also specifies the IP address of the authorized DHCP server and sets the ports connected to the server as trusted. This prevents any unauthorized DHCP server from providing invalid configuration data to the clients on those VLANs. Option B also enables DHCP option-82, which adds information about the switch port and VLAN to the DHCP packets, allowing for more granular control and logging of DHCP transactions.

### NEW QUESTION # 24

You are building a configuration in Central that will be used for a standardized network design for small sites for your company, you want to use GUI configuration for gateways and Aps, while template configuration for switches. You need to align with Aruba best practices.

Which set of actions will satisfy these requirements?

- A. Create one group in Central for switches a second group for APs. and a third group for gateways Create a unique site for each location, and assign devices to the appropriate site.
- B. Create a single group in Central. Create a unique site for each type of device, and assign devices to the appropriate site.
- C. Create a single group in Central. Create a unique site for each location, and assign devices to the appropriate site.
- D. Create one group in Central for switches and a second group for APs and gateways. Create a unique site for each location, and assign devices to the appropriate site.

**Answer: C**

Explanation:

Explanation

This is because option C shows how to create a single group in Central with different configuration methods defined for each device type. For example, you can create a group with the name Group1, and within this group, you can enable template-based configuration method for switches and UI-based configuration method for Instant APs and Gateways. Aruba Central identifies both these groups under a single name (Group1). If a device type in the group is marked for template-based configuration method, the group name is prefixed with TG (TG Group1). You can use Group1 as the group ID for workflows such as user management, monitoring, reports, and audit trail2.

### NEW QUESTION # 25

Your Aruba CX 6300 VSF stack has OSPF adjacency over SVI 10 with LAG 1 to a neighboring device The following configuration was created on the switch:

□

- A.
- B.

- C. □
- D. □

**Answer: B**

Explanation:

Explanation

OSPF (Open Shortest Path First) is a routing protocol that uses link-state information to calculate the best path to each destination in the network. OSPF establishes adjacencies with neighboring routers to exchange routing information and maintain a consistent view of the network topology<sup>1</sup>.

To establish an OSPF adjacency, the routers need to have some common parameters, such as the area ID, the network type, the hello interval, the dead interval, and the authentication method<sup>2</sup>. The routers also need to have a matching subnet mask on the interface that connects them<sup>3</sup>.

In this case, the Aruba CX 6300 VSF stack has an SVI (Switched Virtual Interface) on VLAN 10 with an IP address of 10.1.1.1/24 and a LAG (Link Aggregation Group) on port 1/1/1 and port 2/1/1 that connects to a neighboring device. The SVI is configured with OSPF area 0 and network type broadcast. The LAG is configured with OSPF passive mode, which means that it will not send or receive OSPF hello packets.

The neighboring device has an interface with an IP address of 10.1.1.2/24 and a LAG on port 1/0/1 and port 2/0/1 that connects to the Aruba CX 6300 VSF stack. The interface is configured with OSPF area 0 and network type broadcast. Since the Aruba CX 6300 VSF stack and the neighboring device have the same area ID, network type, subnet mask, and default hello and dead intervals on their interfaces, they will be able to establish an OSPF adjacency over SVI 10 with LAG 1. The OSPF passive mode on the LAG will not affect the adjacency, because it only applies to the LAG interface, not the SVI interface.

#### NEW QUESTION # 26

You need to ensure that voice traffic sent through an ArubaOS-CX switch arrives with minimal latency. What is the best scheduling technology to use for this task?

- A. QoS shaping
- B. Rate limiting
- C. Strict queuing
- D. DWRR queuing

**Answer: C**

Explanation:

Strict queuing is the best scheduling technology to use for voice traffic on an AOS-CX switch.

Scheduling is a mechanism that determines how packets are transmitted from different queues on an egress port. Strict queuing is a scheduling method that gives the highest priority queue absolute preference over all other queues, regardless of their size or utilization. Voice traffic should be assigned to the highest priority queue and scheduled with strict queuing to ensure minimal latency and jitter. The other options are incorrect because they are either not scheduling methods or not optimal for voice traffic.

#### NEW QUESTION # 27

Which statements are true about VSX LAG? (Select two.)

- A. Outgoing traffic is switched to a port based on a hashing algorithm which may be either switch in the pair
- B. The total number of configured links may not exceed 8 for the pair or 4 per switch
- C. LAG traffic is passed over VSX ISL links only while upgrading firmware on the switch pair
- D. Outgoing traffic is preferentially switched to local members of the LAG.
- E. Up to 255 VSX lags can be configured on all 83xx and 84xx model switches.

**Answer: B,D**

Explanation:

Explanation

The correct answers are A and D.

According to the web search results, VSX LAG is a feature that allows multiple PSKs to be used on a single SSID, providing device-specific or group-specific passphrases for enhanced security and deployment flexibility for headless IoT devices<sup>1</sup>. VSX LAGs span both aggregation switches and appear as one device to partner downstream or upstream devices or both when forming a LAG with the VSX pair<sup>2</sup>.

One of the statements that is true about VSX LAG is that the total number of configured links may not exceed 8 for the pair or 4 per switch1. This means that a VSX LAG across a downstream switch can have at most a total of eight member links, and a switch can have a maximum of four member links. When creating a VSX LAG, it is recommended to select an equal number of member links in each segment for load balancing1.

Another statement that is true about VSX LAG is that outgoing traffic is preferentially switched to local members of the LAG2. This means that when active forwarding and active gateway are enabled, north-south and south-north traffic bypasses the ISL link and uses the local ports on the switch. This optimizes the traffic path and reduces the load on the ISL link2.

The other statements are false or not relevant for VSX LAG. Outgoing traffic is not switched to a port based on a hashing algorithm, which may be either switch in the pair. This is a characteristic of MLAG (Multi-Chassis Link Aggregation), which is a different feature from VSX LAG. LAG traffic is not passed over VSX ISL links only while upgrading firmware on the switch pair. This is a scenario that may occur when performing hitless upgrades, which is a feature that allows software updates without impacting network availability. The number of VSX lags that can be configured on all 83xx and 84xx model switches is not 255, but depends on the switch model and firmware version. For example, the AOS-CX 10.04 supports up to 64 VSX lags for 8320 switches and up to 128 VSX lags for 8325 and 8400 switches.

## NEW QUESTION # 28

.....

Being respected and gaining a high social status maybe what you always long for. But if you want to achieve that you must own good abilities and profound knowledge in some certain area. Passing the HPE7-A01 certification can prove that and help you realize your goal and if you buy our HPE7-A01 Quiz prep you will pass the exam successfully. Our product is compiled by experts and approved by professionals with years of experiences. You can download and try out our latest HPE7-A01 quiz torrent freely before your purchase.

**HPE7-A01 Free Updates:** <https://www.guidetorrent.com/HPE7-A01-pdf-free-download.html>

HPE7-A01 valid actual dumps cover all the key points which may occur in the real test, Aruba Certified Campus Access Professional Exam (Real Exam Questions) We have HP HPE7-A01 exam questions answers available and we are providing these Aruba Certified Professional Q&A in PDF format, HP HPE7-A01 Key Concepts To ensure your eligibility to take this exam, you should have intermediate-level knowledge and practical skills in monitoring and securing hybrid environments, including cloud, mobile, and IoT as well as trouble-shooting Cybersecurity issues, HP HPE7-A01 Key Concepts All content are in compliance with regulations of the exam.

All content are arranged in scientific way, and by using them, you can greatly speed up the pace of review, Security assessment and testing, HPE7-A01 valid actual dumps cover all the key points which may occur in the real test.
