- **B. "Consistent" is a quality criteria for work products covering multiple requirements.**
- C. "Non-redundant" is a quality criteria for single requirements.
- **D. "Conformant" is a quality criteria for work products covering multiple requirements.**

**Answer: B,D**

### NEW QUESTION # 68

Which of the following are principles of Requirements Engineering? (Select 2 answers.)

- A. Changing requirements are the exception, not the normal case.
- **B. Requirements should be viewed as means to an end, not the end in itself.**
- C. Requirements Engineering is about satisfying only users' needs.
- D. Systems should be isolated from proper understanding.
- **E. Non-validated requirements are worthless.**

**Answer: B,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

IREB defines a set of RE principles. Principle 1 states that requirements are a means to an end (such as reduced risk and successful systems), not an end in themselves; they support achieving project and business goals. Principle 6 states that non-validated requirements are worthless because unvalidated statements may be incorrect, incomplete, inconsistent or misaligned with stakeholder needs. Requirements normally change over time; change is expected, not exceptional. Systems cannot be understood in isolation from their environment, and RE must consider all relevant stakeholders, not only users. Hence options A and D reflect official principles; the others contradict them.

### NEW QUESTION # 69

Which of the following are NOT categories of validation techniques?

- **A. Assertive techniques**
- B. Sample development techniques
- **C. Evaluation techniques**
