There are CompTIA Cloud+ (CV0-004) Certification Exam (CV0-004) exam questions provided in CompTIA Cloud+ (CV0-004) Certification Exam (CV0-004) PDF questions format which can be viewed on smartphones, laptops, and tablets. So, you can easily study and prepare for your CompTIA Cloud+ (CV0-004) Certification Exam (CV0-004) exam anywhere and anytime. You can also take a printout of these CompTIA PDF Questions for off-screen study.

CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q204-Q209):

NEW QUESTION # 204

The project manager must create a project charter. Which of the following should be included in the charter?

- A. Resource allocation
- **B. Stakeholder identification**
- C. Risk plan
- D. Project schedule

Answer: B

Explanation:

The project charter is a high-level authorization document that outlines the purpose, objectives, and identifies key stakeholders. It does not contain detailed schedules, risk management plans, or resource allocation - those come later in the planning process.

Reference: CompTIA Project+ PK0-005 - Project Initiation & Charter Development; CompTIA Cloud+ CV0-004 Governance & Compliance domain.

NEW QUESTION # 205

A cloud networking engineer is troubleshooting the corporate office's network configuration. Employees in the IT and operations departments are unable to resolve IP addresses on all devices, and the IT department cannot establish a connection to other departments' subnets. The engineer identifies the following configuration currently in place to support the office network:

□ Each employee needs to connect to the network with a maximum of three hosts. Each subnet must be segregated, but the IT department must have the ability to communicate with all subnets. Which of the following meet the IP addressing and routing requirements? (Select two).

- A. Configuring static routing to allow access from each subnet to 10.1.40.1
- B. Modifying the BYOD policy to reduce the volume of devices that are allowed to connect to the corporate network
- C. Combining the subnets and increasing the allocation of IP addresses available to support three hosts for each employee
- D. Modifying the subnet mask to 255.255.254.0 for IT and operations departments
- E. Modifying the subnet mask to 255.255.255.128 for the IT and operations departments
- F. Configuring static routing to allow access from 10.1.30.1 to each subnet

Answer: E,F

Explanation:

To meet the requirements of allowing the IT department to communicate with all subnets while keeping each department segregated and ensuring a maximum of three hosts per employee, two actions are required. First, configuring static routing from the IT subnet (10.1.30.1) to each of the other subnets would establish the necessary connectivity. Second, modifying the subnet mask to 255.255.255.128 for the IT and operations departments would provide the needed number of host addresses while maintaining subnet segregation.

Reference: This solution is based on networking and subnetting principles, which are part of the foundational knowledge for cloud networking within the CompTIA Cloud+ framework.

NEW QUESTION # 206

A banking firm's cloud server will be decommissioned after a successful proof of concept using mirrored data. Which of the following is the best action to take regarding the storage used on the decommissioned server?

- A. Keep it temporarily.
- B. Archive it.
- C. Delete it.
- D. Retain it permanently

Answer: B

Explanation:

When a cloud server is decommissioned after a proof of concept, the best action to take regarding the storage used on the server is to archive it. Archiving ensures that the data is kept in a less accessible but secure storage service, which may be required for regulatory or compliance reasons, especially for a banking firm.

Reference: Data management strategies, including archiving decommissioned data, are covered in the CompTIA Cloud+ examination objectives, particularly within the domain of management and technical operations.

NEW QUESTION # 207

A cloud engineer needs to deploy a new version of a web application to 100 servers. In the past, new version deployments have caused outages. Which of the following deployment types should the cloud engineer implement to prevent the outages from happening this time?

- A. Round-robin
- B. Rolling
- C. Canary
- D. Blue-green

Answer: C

Explanation:

A canary deployment is a pattern that reduces the risk of introducing a new software version in production by slowly rolling out the change to a small subset of users before rolling it out to the entire infrastructure. It's an effective strategy to prevent outages since it allows for monitoring and quick rollback if issues arise without affecting all users. References: Canary releases are part of deployment strategies that can help mitigate the risk of outages during updates, a concept included in the CompTIA Cloud+ curriculum.

NEW QUESTION # 208

Which of the following services is most appropriate for routing requests in front of a replica set of virtual machines that host multiple websites?

- **A. Layer 7 load balancer**
- B. Forward proxy
- C. Content delivery network
- D. Web application firewall

Answer: A

Explanation:

A Layer 7 load balancer can inspect HTTP/HTTPS traffic and route requests based on application-level data, such as host headers or URLs, making it ideal for distributing traffic across multiple websites hosted on a replica set of VMs.

NEW QUESTION # 209

.....

Everybody should recognize the valuable of our life; we can't waste our time, so you need a good way to help you get your goals straightly. Of course, our CV0-004 latest exam torrents are your best choice. I promise you that you can learn from the CV0-004 Exam Questions not only the knowledge of the certificate exam, but also the ways to answer questions quickly and accurately.
