

HPE7-A01 Prepaway Dumps | Valid HPE7-A01 Test Dumps

What's more, part of that Itcerttest HPE7-A01 dumps now are free: <https://drive.google.com/open?id=1X9Hoxdzr-UUepwTciXwZa-g16uEIDvmR>

The Itcerttest is a leading platform that is committed to offering to make HP Exam Questions preparation simple, smart, and successful. To achieve this objective Itcerttest has got the services of experienced and qualified HP HPE7-A01 Exam trainers. They work together and put all their efforts and ensure the top standard of Itcerttest HP HPE7-A01 exam dumps all the time.

If you're looking to accelerate your career in the field of information technology, don't hesitate to take advantage of our top-notch HP HPE7-A01 practice material. What sets Itcerttest apart is our commitment to providing updated and actual HPE7-A01 certification exam questions. Our dedicated team works hard to collect and update the HPE7-A01 Exam Questions based on the latest exam sections. We closely observe the real HP HPE7-A01 content to ensure that our unique and error-free exam questions make your preparation successful.

HPE7-A01 Prepaway Dumps: Unparalleled Aruba Certified Campus Access Professional Exam - Free PDF Quiz 2026 HPE7-A01

After so many years' development, our HPE7-A01 exam torrent is absolutely the most excellent than other competitors, the content

of it is more complete, the language of it is more simply. Once you use our HPE7-A01 latest dumps, you will save a lot of time. High effectiveness is our great advantage. After twenty to thirty hours' practice, you are ready to take the real HPE7-A01 Exam Torrent. The results will never let you down. You just need to wait for obtaining the certificate.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q79-Q84):

NEW QUESTION # 79

You need to ensure that voice traffic sent through an ArubaOS-CX switch arrives with minimal latency. What is the best scheduling technology to use for this task?

- A. DWRR queuing
- **B. Strict queuing**
- C. QoS shaping
- D. Rate limiting

Answer: B

Explanation:

Strict queuing is the best scheduling technology to use for voice traffic on an AOS-CX switch. Scheduling is a mechanism that determines how packets are transmitted from different queues on an egress port. Strict queuing is a scheduling method that gives the highest priority queue absolute preference over all other queues, regardless of their size or utilization. Voice traffic should be assigned to the highest priority queue and scheduled with strict queuing to ensure minimal latency and jitter. The other options are incorrect because they are either not scheduling methods or not optimal for voice traffic. Reference:

NEW QUESTION # 80

With Aruba CX 6300, how do you configure IP address 10.10.10.1 for the interface in default state for interface 1/1/1?

- A. int 1/1/1. routing ip address 10.10.10.1/24
- B. int 1/1/1. switching ip address 10.10.10.1/24
- C. int 1/1/1. ip address 10.10.10.1/24
- **D. int 1/1/1. no switching ip address 10.10.10.1/24**

Answer: D

Explanation:

To configure an IP address for an interface in default state for interface 1/1/1 on Aruba CX 6300 switch, you need to disable switching on the interface first with the command `no switching`. Then you can assign an IP address with the command `ip address`. The other options are incorrect because they either do not disable switching or use invalid keywords such as `switching` or `routing`.

NEW QUESTION # 81

A customer wants to enable wired authentication across all their CX switches. One of the requirements is that the switch must be able to authenticate a single computer connected through a VoIP phone.

Which feature should be enabled to support this requirement?

- A. MAC Authentication
- **B. Multi-Domain Authentication**
- C. Device-Based Mode
- D. Multi-Auth Mode

Answer: B

Explanation:

Multi-Domain Authentication is the feature that should be enabled to support the requirement that the switch must be able to authenticate a single computer connected through a VoIP phone. Multi-Domain Authentication is a feature that allows an Aruba CX

switch to apply different authentication methods and policies to different devices connected to the same port. For example, a VoIP phone and a computer can be connected to the same port using a single cable, but they can be authenticated separately using different credentials and assigned to different VLANs. The other options are incorrect because they either do not support multiple devices on the same port or do not provide authentication. References:

NEW QUESTION # 82

A customer is using a legacy application that communicates at layer-2. The customer would like to keep this application working across the campus which is connected via layer-3. The legacy devices are connected to Aruba CX 6300 switches throughout the campus.

Which technology minimizes flooding so the legacy application can work efficiently?

- A. **EVPN-VXLAN**
- B. Ethernet over IP (EoIP)
- C. Static VXLAN
- D. Generic Routing Encapsulation (GRE)

Answer: A

Explanation:

EVPN-VXLAN is a technology that allows layer-2 communication across layer-3 networks by using Ethernet VPN (EVPN) as a control plane and Virtual Extensible LAN (VXLAN) as a data plane³. EVPN-VXLAN can be used to support legacy applications that communicate at layer-2 across different campuses or data centers that are connected via layer-3. EVPN-VXLAN minimizes flooding by using BGP to distribute MAC addresses and IP addresses of hosts across different VXLAN segments³. EVPN-VXLAN also provides benefits such as loop prevention, load balancing, mobility, and scalability³. References: ³ https://www.arubanetworks.com/assets/tg/TG_EVPN_VXLAN.pdf

NEW QUESTION # 83

A customer just upgraded aggregation layer switches and noticed traffic dropping for 120 seconds after the aggregation layer came online again. What is the best way to avoid having this traffic dropped given the topology below?

- A. Configure the linkup delay timer to exclude LAGS 101 and 102, which will allow time for routing adjacencies to form and to learn upstream routes
- B. **Configure the linkup delay timer to include LAGS 101 and 102, which will allow time for routing adjacencies to form and to learn upstream routes**
- C. Configure the linkup delay timer to 240 seconds to double the amount of time for the initial phase to sync
- D. Configure the linkup delay timer to 120 seconds, which will allow the right amount of time for the initial phase to sync

Answer: B

Explanation:

The reason is that the linkup delay timer is a feature that delays bringing downstream VSX links up, following a VSX device reboot or an ISL flap. The linkup delay timer has two phases: initial synchronization phase and link-up delay phase.

The initial synchronization phase is the download phase where the rebooted node learns all the LACP+MAC+ARP+STP database entries from its VSX peer through ISLP. The initial synchronization timer, which is not configurable, is the required time to download the database information from the peer.

The link-up delay phase is the duration for installing the downloaded entries to the ASIC, establishing router adjacencies with core nodes and learning upstream routes. The link-up delay timer default value is 180 seconds. Depending on the network size, ARP/routing tables size, you might be required to set the timer to a higher value (maximum 600 seconds).

When both VSX devices reboot, the link-up delay timer is not used.

Therefore, by configuring the linkup delay timer to include LAGs 101 and 102, which are part of the same VSX device as LAG 201, you can ensure that both devices have enough time to synchronize their databases and form routing adjacencies before bringing down their downstream links.

NEW QUESTION # 84

.....

For candidates who need to practice the HPE7-A01 exam dumps for the exam, know the new changes of the exam center is quite necessary, it will provide you the references for the exam. We will provide you free update for 365 days after purchasing the product of us, so you will know the latest version of HPE7-A01 Exam Dumps. What's more, our system will send the latest version to your email box automatically. You just need to receive the version.
