NEW QUESTION # 86
Which two statements are correct when assigning partitions to the consumers in a consumer group using the assign() API? (Select two.)

- A. The consumer chooses which partition to read without any assignment from brokers.
- B. All topics must have the same number of partitions to use assign() API.
- C. It is mandatory to subscribe to a topic before calling assign() to assign partitions.
- D. The consumer group will not be rebalanced if a consumer leaves the group.

Answer: A,D

Explanation:
Using assign() gives manual control over partition assignment. In this mode:
* B is true: The application chooses partitions directly without involving the group coordinator.
* C is true: Since no group coordination occurs, no rebalancing happens if a consumer dies.

FromKafka Consumer API Docs:
"assign() manually assigns a list of partitions to this consumer. No coordination takes place and no rebalancing is triggered."
* A is false: subscribe() and assign() aremutually exclusive.
* D is incorrect: Partitions don't need to be equal across topics.

NEW QUESTION # 90

A consumer wants to read messages from a specific partition of a topic. How can this be achieved?

- **A. Call assign() passing a Collection of TopicPartitions as the argument**
- B. Call subscribe() passing TopicPartition as the argument
- C. Call subscribe(String topic, int partition) passing the topic and partition number as the arguments
