

Exam 3V0-22.25 Fees - 3V0-22.25 Free Braindumps

If you buy the It-Tests's products, we will not only spare no effort to help you pass the certification exam, but also provide a free update and upgrade service. If the official change the outline of the certification exam, we will notify customers immediately. If we have any updated version of test software, it will be immediately pushed to customers. It-Tests can promise to help you succeed to pass your first VMware Certification 3V0-22.25 Exam.

VMware 3V0-22.25 practice braindumps will be worthy of purchase, and you will get manifest improvement. So you have a comfortable experience with our 3V0-22.25 study guide this time. By using our 3V0-22.25 Preparation materials, we are sure you will pass your exam smoothly and get your dreamed certification.

High Pass-Rate Exam 3V0-22.25 Fees Provide Prefect Assistance in 3V0-22.25 Preparation

If you buy It-Tests VMware 3V0-22.25 Exam Training materials, you will solve the problem of your test preparation. You will get the training materials which have the highest quality. Buy our products today, and you will open a new door, and you will get a better future. We can make you pay a minimum of effort to get the greatest success.

VMware Advanced VMware Cloud Foundation 9.0 Operation Sample Questions (Q314-Q319):

NEW QUESTION # 314

How does VCF Operations for Logs integrate with VCF Operations (Metrics) to provide a unified troubleshooting experience? (Choose 2.)

- A. VCF Operations for Logs allows "Launch in Context", enabling an admin viewing an object in VCF Operations to click a button and jump directly to the relevant logs for that object in the Log interface.
- B. VCF Operations for Logs replaces the VCF Operations database, storing all metrics and logs in a single repository.
- C. VCF Operations for Logs can send "Log Alerts" to VCF Operations, where they appear as "Events" on the object's timeline, allowing correlation of metric spikes with log errors.
- D. VCF Operations automatically uninstalls the Log Insight agent and replaces it with the Telegraf agent for all logging tasks.

Answer: A,C

NEW QUESTION # 315

An administrator configures Data Archiving to an NFS share. One weekend, the NFS server crashes and remains offline for 48 hours. During this time, the VCF Operations for Logs cluster continues to ingest heavy log traffic, filling the local disks to capacity. What is the system's behavior regarding the data that was queued for archiving?

- A. The system stops ingesting new logs to preserve the un-archived data (Backpressure).

- B. The system automatically switches to the secondary archive target.
- C. The system caches the data in RAM until the NFS server returns.
- D. The system generates an alert, but continues to ingest new data. To free up space for the new logs, it Deletes the oldest local log buckets, even if they have not yet been successfully archived. This results in permanent data loss for the un-archived period.

Answer: D

NEW QUESTION # 316

Which statement accurately differentiates VCF Operations for Networks from VCF Operations (Metrics) regarding "Flow Analysis"?

- A. VCF Operations (Metrics) focuses on the health of the network components (e.g., Dropped Packets % on a vNIC), whereas VCF Operations for Networks focuses on the traffic patterns (Who is talking to Whom, over which port, and how much bandwidth).
- B. VCF Operations for Networks is only for physical switches; VCF Operations is only for virtual switches.
- C. VCF Operations (Metrics) analyzes IPFIX flows in real-time to detect DDoS attacks.
- D. Both tools provide identical flow analysis capabilities; the difference is only in the licensing.

Answer: A

NEW QUESTION # 317

An architect is sizing the Cloud Proxy deployment for a large remote branch ("Branch-West").

Site Metrics

Total Objects: 12,000 (VMs + Hosts + Datastores)

Total Metrics: 2.5 Million

Sizing Guide Reference (Approximation)

Small Proxy: Supports ~2,000 Objects

Standard Proxy: Supports ~10,000 Objects

Large Proxy: Supports ~32,000 Objects

Extra Large Proxy: Supports ~70,000 Objects

Availability Requirement

N+1 Redundancy for Data Collection is mandatory.

Which design specification represents the most efficient and compliant configuration for "Branch-West"?

- A. Deploy two Standard Cloud Proxies and configure them as independent collectors, splitting the vCenter inventory manually.
- B. Deploy two Large Cloud Proxies and configure them into a single Collector Group.
- C. Deploy two Small Cloud Proxies and enable "vSphere HA" on the underlying cluster.
- D. Deploy one Extra Large Cloud Proxy to handle the 12,000 objects with room for growth.

Answer: B

NEW QUESTION # 318

Which prerequisite is required for VCF Operations to successfully execute a "Power Off" or "Delete" action on a VM from the Reclaim workbench?

- A. The Cloud Proxy must have SSH enabled.
- B. The VCF Operations "Action Service" must be stopped.
- C. The user must be logged in as root.
- D. The vCenter Adapter Instance must be configured with "Enable Actions = True", and the credential used by the adapter must have the necessary vSphere permissions (e.g., VirtualMachine.Interact.PowerOff) to perform the task.

Answer: D

NEW QUESTION # 319
