DA0-001 Learning Materials & DA0-001 Latest Test Labs

Our CompTIA Data+ Certification Exam exam questions are designed by a reliable and reputable company and our company has rich experience in doing research about the study materials. We can make sure that all employees in our company have wide experience and advanced technologies in designing the DA0-001 study dump. So a growing number of the people have used our study materials in the past years, and it has been a generally acknowledged fact that the quality of the DA0-001 Test Guide from our

company is best in the study materials market. Now we would like to share the advantages of our DA0-001 study dump to you, we hope you can spend several minutes on reading our introduction; you will benefit a lot from it.

CompTIA DA0-001 (CompTIA Data+ Certification) Certification Exam is an essential certification for IT professionals who want to demonstrate their skills and knowledge in data management. CompTIA Data+ Certification Exam certification is recognized worldwide, and it is vendor-neutral, making it an attractive certification for IT professionals who want to work across a wide range of technologies and platforms.

CompTIA DA0-001 Exam covers a wide range of topics, including database concepts, data modeling, data warehousing, data visualization, and data security. DA0-001 exam is designed to test the practical knowledge of candidates in these areas and their ability to apply this knowledge in real-world scenarios. DA0-001 exam consists of 90 multiple-choice questions, and candidates have 90 minutes to complete it.

CompTIA Data+ Certification Exam Sample Questions (Q236-Q241):

NEW QUESTION # 236
A data analyst has been asked to create an ad-hoc sales report for the Chief Executive Officer (CEO).
Which of the following should be included in the report?

- **A. YTD total sales.**
- B. The customers' first and last names.
- C. The sales representatives' home addresses.
- D. Line-item SKU numbers.

Answer: A

NEW QUESTION # 237
Given the following report:
Which of the following components need to be added to ensure the report is point-in-time and static? (Choose two.)

- A. A summary of the KPIs
- B. Filter buttons for the status
- C. A control group for the phrases
- **D. The time period the report covers**
- E. The date when the report was last accessed
- F. The date on which the report was run

Answer: D

Explanation:
The date on which the report was run. This is because the time period the report covers and the date on which the report was run are two components that need to be added to ensure the report is point-in-time and static, which means that the report shows the data as it was at a specific moment or interval in time, and does not change or update with new data. By adding the time period the report covers and the date on which the report was run, the analyst can indicate when and for how long the data was collected and analyzed, as well as avoid any confusion or ambiguity about the currency or validity of the data. The other components do not need to be added to ensure the report is point-in-time and static. Here is why:
A control group for the phrases is a type of group that serves as a baseline or a reference for comparison with another group that is exposed to some treatment or intervention, such as a target phrase in this case. A control group for the phrases does not need to be added to ensure the report is point-in-time and static, because it does not affect the time frame or the stability of the data. However, a control group for the phrases could be useful for evaluating the effectiveness or impact of the target phrases on customer satisfaction or retention.
A summary of the KPIs is a type of document that provides an overview or a highlight of the key performance indicators (KPIs), which are measurable values that indicate how well an organization or a process is achieving its goals or objectives. A summary of the KPIs does not need to be added to ensure the report is point-in-time and static, because it does not affect the time frame or the stability of the data. However, a summary of the KPIs could be useful for communicating or presenting the main findings or insights from the report.
Filter buttons for the status are a type of feature or function that allows users to select or deselect certain values or categories in a column or a table, such as ticket statuses in this case. Filter buttons for the status do not need to be added to ensure the report is point-in-time and static, because they do not affect the time frame or the stability of the data. However, filter buttons for the status could be useful for exploring or analyzing different aspects or segments of the data.

NEW QUESTION # 238

A data analyst needs to create a dashboard to help identify trends in the data sets. Which of the following is an appropriate consideration for dashboard development?

- A. Frequently asked questions
- B. A comparison of data sets
- C. A report from the data source
- D. Data sources and attributes

Answer: D

Explanation:

When creating a dashboard to identify trends in data sets, the most appropriate consideration is the data sources and attributes. This is because the quality, reliability, and structure of the data sources directly influence the dashboard's ability to accurately reflect trends. Attributes, such as the type of data and the time frame it covers, are crucial for trend analysis. A well-designed dashboard should provide a clear and intuitive representation of the data, allowing for easy identification of trends and patterns.

Frequently asked questions (B) can inform the design of the dashboard but are not a direct consideration for the development process itself. A report from the data source might be an output of the dashboard but does not guide its development. A comparison of data sets (D) could be a feature of the dashboard, but the underlying data sources and attributes must be considered first to ensure accurate and meaningful comparisons.

Reference:

Best practices in dashboard design emphasize the importance of understanding and consolidating different data sources and creating a mix of useful metrics, which aligns with the choice of data sources and attributes1.

Fundamental dashboard design principles include the clear and efficient display of information, which is dependent on the proper selection and use of data sources and attributes2.

Effective dashboard communication is achieved by using colors, shapes, sizes, labels, and legends meaningfully, all of which rely on the underlying data sources and attributes3.

NEW QUESTION # 239

A data analyst wants to create "Income Categories" that would be calculated based on the existing variable
"Income". The "Income Categories" would be as follows:
Income category 1: less than $1.
Income category 2: more than $1 and less than $20,000.
Income category 3: more than $20,001 and less than $40,000.
Income category 4: more than $40,001.
Which of the following data manipulation techniques should the data analyst use to create "Income Categories"?

- A. Data blending
- B. Data append
- C. Data merge
- D. Derived variables

Answer: D

Explanation:

The correct answer is B: Derived variables Derived variables are variables that you create by calculating or categorizing variables that already exist in your data set.

Data merge is incorrect. Data merging is the process of combining two or more data sets into a single data set.

Data blending is incorrect.

Data blending involves pulling data from different sources and creating a single, unique, dataset for visualization and analysis.

Data append is incorrect. A data append is a process that involves adding new data elements to an existing database.

NEW QUESTION # 240

Consider this dataset showing the retirement age of 11 people, in whole years:
54, 54, 54, 55, 56, 57, 57, 58, 58, 60, 60
This tables show a simple frequency distribution of the retirement age data.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
Explanation
A measure of central tendency (also referred to as measures of centre or central location) is a summary measure that attempts to describe a whole set of data with a single value that represents the middle or centre of its distribution.
There are three main measures of central tendency: the mode, the median and the mean. Each of these measures describes a different indication of the typical or central value in the distribution.
What is the mode?
The mode is the most commonly occurring value in a distribution.
The most commonly occurring value is 54, therefore the mode of this distribution is 54 years.
