

# 6V0-21.25 Real Dumps Free - 6V0-21.25 Dumps Collection

2026 Latest RealVCE 6V0-21.25 PDF Dumps and 6V0-21.25 Exam Engine Free Share: <https://drive.google.com/open?id=1GXX0m8A4hHOvKWPkoXGCUTry6ulkV5n>

Our VMware 6V0-21.25 web-based practice exam software also simulates the VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) environment. These VMware 6V0-21.25 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. RealVCE web-based 6V0-21.25 Practice Exam software is usable only with a good internet connection. You can use this VMware 6V0-21.25 version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE.

The experts and professors of our company have designed the three different versions of the 6V0-21.25 study materials, including the PDF version, the online version and the software version. Now we are going to introduce the online version for you. There are a lot of advantages about the online version of the 6V0-21.25 Study Materials from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment.

## 6V0-21.25 Dumps Collection | 6V0-21.25 Reliable Exam Simulator

The VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) practice exam consists of a VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) PDF dumps format, Desktop-based 6V0-21.25 practice test software and a Web-based VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) practice exam. Each of the RealVCE VMware 6V0-21.25 Exam Dumps formats excels in its way and carries actual VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) exam questions for optimal preparation.

### VMware 6V0-21.25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• Security Automation: Covers integrating tools and scripting to automate firewall policy creation, security group management, and network configuration.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• IDPS (Intrusion Detection and Prevention System): Covers inspecting network traffic at every hypervisor and workload level to detect and prevent advanced cyber threats.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Troubleshooting: Covers verifying health status of service instances and security components, and resolving protection and performance issues.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Role-Based Access Control: Covers creating roles and groups within the security operations team to grant appropriate portal access.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• VMware vDefend Firewall Architecture: Covers the design and components of VMware's software-defined, distributed security architecture.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• Private Cloud Data Center Security: Covers foundational concepts for securing workloads and infrastructure within a private cloud data center environment.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• Gateway Firewall: Covers edge security devices that control and filter north-south network traffic, blocking unauthorized access at the network perimeter.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>• Advanced Threat Prevention: Covers a suite of analysis tools designed to defend against both known and unknown advanced attack vectors.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>• Context Aware Firewall and Identity Firewall: Covers advanced firewall controls that use user identity and application context rather than just IP addresses and ports.</li> </ul>
Topic 10	<ul style="list-style-type: none"> <li>• Malware Prevention Detection: Covers safeguarding private cloud workloads against ransomware and malicious activity targeting virtualized environments.</li> </ul>
Topic 11	<ul style="list-style-type: none"> <li>• VMware vDefend Firewall Management: Covers day-to-day administration and management of the distributed firewall solution for securing virtualized workloads.</li> </ul>
Topic 12	<ul style="list-style-type: none"> <li>• Shared Services Platform (SSP): Covers the back-end security data and analytics platform that underpins vDefend security services.</li> </ul>

## VMware vDefend Security for VCF 5.x Administrator Sample Questions (Q61-Q66):

### NEW QUESTION # 61

On which node does the vDefend local control plane (LCP) reside?

- A. vCenter appliance
- B. NSX Controller appliance
- C. ESXi host
- D. NSX Manager appliance

**Answer: C**

Explanation:

The VMware vDefend (NSX) control plane is divided into two distinct components to ensure maximum scalability and resiliency: the Central Control Plane (CCP) and the Local Control Plane (LCP).

Central Control Plane (CCP): This resides logically on the NSX Manager cluster. It computes the overall network and security topology based on the administrator's intent.

Local Control Plane (LCP): This resides directly on every individual ESXi host (and Edge Node) as a daemon/service (specifically the nsx-proxy and netcpa agents). The CCP pushes the calculated state down to the LCP on the host. The LCP is then responsible for programming those specific rules directly into the host's Data Plane (the hypervisor kernel modules). By keeping an LCP on the ESXi host, the host can continue to enforce security rules and route traffic even if it temporarily loses connectivity to the central NSX

Managers.

#### NEW QUESTION # 62

Which of the following is not an available option for membership criteria selection when creating group of type Antrea?

- A. K8s NetworkPolicy
- B. K8s Service
- C. Antrea Egress
- D. K8s Namespace

**Answer: A**

Explanation:

When integrating Kubernetes via the Antrea CNI, vDefend allows administrators to dynamically group container workloads to apply broad security policies. You can group these workloads by native Kubernetes metadata attributes, specifically their K8s Namespace, the K8s Service they belong to, or their Antrea Egress IP bindings.

However, you cannot use a K8s NetworkPolicy as a grouping criterion. A NetworkPolicy is the actual security rule/enforcement intent applied to the pods, not an identity attribute or label of the pod itself. Grouping by a rule to apply another rule creates a logical conflict, so it is not an available option in the vDefend UI.

#### NEW QUESTION # 63

What component must be enabled to perform flow-based behavioral analysis for NDR in NSX?

Response:

- A. NSX Edge Load Balancer
- B. vCenter Alarms
- C. NSX Federation Global Manager
- D. NSX Intelligence

**Answer: D**

#### NEW QUESTION # 64

Which of the following components can enforce Layer 7 Context Firewall Rules? (Select all that apply)

- A. Tier 1 Gateway
- B. Distributed Firewall
- C. Tier 0 Gateway
- D. VMK Interface

**Answer: A,B,C**

Explanation:

Layer 7 Context-Aware Firewalling goes beyond traditional Layer 3 (IP Address) and Layer 4 (Port/Protocol) filtering. It involves Deep Packet Inspection (DPI) to identify the actual application (App-ID), URL, or Fully Qualified Domain Name (FQDN) being used (e.g., distinguishing between standard web browsing and an unauthorized file transfer over the same HTTPS port 443). VMware vDefend is highly versatile and can enforce these advanced Layer 7 context rules across multiple enforcement points in the data center:

Distributed Firewall (DFW) (Option A): Enforces L7 rules directly at the vNIC of the virtual machine. This is ideal for East-West micro-segmentation, stopping a compromised VM from communicating with another VM via an unauthorized application protocol.

Tier-1 Gateway (Option B): Enforces L7 rules at the tenant or application boundary. This is ideal for protecting a specific application zone from other zones within the data center.

Tier-0 Gateway (Option C): Enforces L7 rules at the main edge of the data center. This acts as the primary North-South perimeter firewall, inspecting traffic entering or leaving the physical network.

(Note: VMkernel (VMK) interfaces (Option D) are strictly used by the ESXi hypervisor for management, vMotion, and storage traffic, and are not dataplane enforcement points for guest VM firewall rules).

### NEW QUESTION # 65

Which component is responsible for defining the security policy in a software-defined firewall architecture?

Response:

- A. NSX Application Platform
- **B. NSX Policy API or UI**
- C. DRS Load Balancer
- D. vSphere Update Manager

**Answer: B**

### NEW QUESTION # 66

.....

In addition to the free download of sample questions, we are also confident that candidates who use 6V0-21.25 study materials will pass the exam at one go. 6V0-21.25 study materials are revised and updated according to the latest changes in the syllabus and the latest developments in theory and practice. Regardless of your weak foundation or rich experience, 6V0-21.25 study materials can bring you unexpected results. In the past, our passing rate has remained at 99%-100%. This is the most important reason why most candidates choose 6V0-21.25 Study Materials. Failure to pass the exam will result in a full refund. But as long as you want to continue to take the 6V0-21.25 exam, we will not stop helping you until you win and pass the certification.
