Education-Cloud-Consultant Relevant Answers | Latest Education-Cloud-Consultant Test Testking

No matter who you are, I believe you can do your best to achieve your goals through our Education-Cloud-Consultant Preparation questions! For we have three different versions of Education-Cloud-Consultant exam materials to satisfy all your needs. The PDF version of Education-Cloud-Consultant practice guide can be printed so that you can take it wherever you go. And the Software version can simulate the real exam environment and support offline practice. Besides, the APP online can be applied to all kind of electronic devices.

Earning the Salesforce Education-Cloud-Consultant certification demonstrates a candidate's expertise in using Salesforce to support student success and institutional effectiveness. Salesforce Certified Education Cloud Consultant Exam certification is particularly valuable for professionals working in education technology, student services, and academic administration. It can also be beneficial for consultants and implementation specialists who work with education institutions to implement Salesforce solutions.

To prepare for the Salesforce Education-Cloud-Consultant Exam, candidates should have a solid understanding of Salesforce Education Cloud, including its features, capabilities, and best practices. Salesforce provides a range of training resources, including online courses, Trailhead modules, and study guides, to help candidates prepare for the exam. Additionally, candidates should have hands-on experience working with Salesforce Education Cloud solutions to be well-prepared for the exam.

Salesforce Certified Education Cloud Consultant Exam Sample Questions (Q71-Q76):

NEW QUESTION # 71

An Advancement office is evaluating the automation capabilities of the Education Data Architecture (EDA). The office needs to be able to identify inactive addresses and have them sync to the contact record. How should the consultant meet this requirement?

- A. Select the "Inactive" checkbox on the Address record.
- B. Set the inactive address on the Contact record through integration.
- C. Develop a custom trigger to update the Contact record.

Answer: A

Explanation:

The Education Data Architecture (EDA) provides a feature to track and manage multiple addresses for contacts and accounts using the Address object¹. The Address object has a field called "Inactive" that indicates whether the address is currently in use or not². By selecting the "Inactive" checkbox on the Address record, the consultant can mark the address as inactive and have it sync to the contact record. The contact record will then show the inactive address in the Mailing Address field, with a strike-through line to indicate that it is no longer valid³.

Setting the inactive address on the contact record through integration is not a recommended solution, as it would bypass the EDA address management feature and create inconsistency between the contact and address records. Developing a custom trigger to update the contact record is also not necessary, as EDA already provides a built-in mechanism to handle inactive addresses using the Address object.

NEW QUESTION # 72

A partner wants to self-certify that its app complies with Education Data Architecture (EDA) readiness. The partner needs to certify that its solution is compatible with EDA, or if it duplicates EDA functionality, that it is properly documented and abides by conventions for key EDA objects.

What are two key objects used with EDA?

Choose 2 answers.

- A. Affiliation
- B. Opportunity
- C. Account
- D. Attribute

Answer: A,D

Explanation:

Affiliation and Attribute are two key objects used with EDA. Affiliation is an object that represents a relationship between a Contact and an Account or another Contact. Affiliation can be used to track various types of relationships, such as student, faculty, staff, alumni, donor, or advisor. Attribute is an object that stores additional information about a Contact or an Applicant that is not captured by other EDA objects. Attribute can be used to track various types of information, such as test scores, languages, hobbies, certifications, and documents. Opportunity and Account are not key objects specific to EDA, but rather standard Salesforce objects. Reference:

NEW QUESTION # 73

The Advancements Office wants Salesforce to automatically create a supporters' score based on their donation amount, giving capacity, giving history, and relationship type to the university.

Which Salesforce solution should the consultant recommend?

- A. Nonprofit Success Pack
- B. Einstein Prediction Builder
- C. Tableau CRM

- D. Insights Platform Data Integrity

Answer: B

Explanation:

Einstein Prediction Builder is a Salesforce solution that the consultant can recommend to automatically create a supporters' score based on their donation amount, giving capacity, giving history, and relationship type to the university. Einstein Prediction Builder allows the consultant to create custom predictive models without code, using fields from any object as inputs and outputs. Tableau CRM, Nonprofit Success Pack, and Insights Platform Data Integrity are not Salesforce solutions that can create a supporters' score based on the given criteria. Reference:

NEW QUESTION # 74

A system admin plans to load data into Salesforce in the following order. Team, Course, Course offering, and Account. What should the consultant discuss with the system admin?

- A. There is a risk of account data skew.
- **B. There is a risk of lookup data skew.**
- C. Account is a required field for Team

Answer: B

Explanation:

Explanation

There is a risk of lookup data skew when loading data into Salesforce in the order of Team, Course, Course Offering, and Account, because the Team object has a lookup relationship to the Account object, and many Team records may reference the same Account record. This can cause performance issues when querying or updating the data. Account is not a required field for Team, and there is no risk of account data skew, which occurs when a single user owns a large number of Account records. References:

NEW QUESTION # 75

The Financial Aid department of a college uses Student Success Hub. Students need the ability to schedule an appointment with any financial aid advisor.

Which object should the consultant configure in Student Success Hub to meet this requirement?

- **A. Advising Pools**
- B. Public Groups
- C. EDA Relationships

Answer: A

Explanation:

The consultant should configure the Advising Pools object in Student Success Hub to meet the requirement of allowing students to schedule an appointment with any financial aid advisor for the Financial Aid department that uses Student Success Hub. The Advising Pools object is an object in Student Success Hub that allows users to create groups of advisors who share a common availability, location, or service. The Advising Pools object can help the Financial Aid department meet the requirement of allowing students to schedule an appointment with any financial aid advisor by creating an Advising Pool record for financial aid advisors and associating it with a Service record for financial aid advising. The consultant can also configure other settings such as availability, location, or capacity for the Advising Pool record. Public Groups, EDA Relationships, or Program Plans are not objects that the consultant should configure in Student Success Hub to meet the requirement of allowing students to schedule an appointment with any financial aid advisor for the Financial Aid department that uses Student Success Hub.
