past exam papers and the current exam tendency, and design such an effective simulation function to place you in the Real Desktop-Specialist Exam environment. We promise to provide a high-quality simulation system with advanced Desktop-Specialist study materials to help you pass the exam with ease.

Tableau Desktop Specialist Exam Sample Questions (Q24-Q29):

NEW QUESTION # 24

True or False: Context Filters are executed after Data Source filters

- A. False
- **B. True**

Answer: B

Explanation:

THIS IS A VERY IMPORTANT QUESTION

To answer this question, you need to understand Tableau's Order of Operations. See below and remember this always:

□

NEW QUESTION # 25

Which of the following are valid way(s) to make either of Rows or Columns Bold without affecting the other?

- **A. Right click on Rows or Columns, and choose format. In the Font option click on Bold.**
- B. Select Text Label on the Marks Card, choose Rows or Columns, and then select Bold.
- C. Choose Format then Font from the Menu bar, and select Bold under the Header option
- **D. Choose Format from the Menu bar, select Row or Column, and then select Bold under the header option**

Answer: A,D

Explanation:

1) Right click on Rows or Columns, and choose format. In the Font option click on Bold. (CORRECT) - this will modify only the selected axis (row or column)

□

2) Choose Format then Font from the Menu bar, and select Bold under the Header option (INCORRECT) - this modifies both rows and columns at the same time

□

3) Choose Format from the Menu bar, select Row or Column, and then select Bold under the header option (CORRECT) - this will modify only the selected axis (row or column)

□

4) Select Text Label on the Marks Card, choose Rows or Columns, and then select Bold. (INCORRECT)

- no such option exists

□

NEW QUESTION # 26

If you see the following Filter, then you're working with _____ [Larger image](#)

□

- **A. Date Values**
- B. Date Parts
- C. Grouped Dates
- D. Date Functions

Answer: A

Explanation:

Explanation

Dates in Tableau will behave differently depending on whether they are a Datepart (blue) or a Datevalue (green). This affects how the axes display/behave and also how visualisations such as line charts will display.

The difference essentially boils down to Dateparts behaving like a dimension as opposed to a measure which is how Datevalues behave. This means that Dateparts behave like discrete categories on the view whereas Datevalues are more like continuous numeric values.

Dateparts are discrete and they behave the same as dimension filters. If all dates are used on the filter then each individual date will

be a datepart that can be selected/excluded. This is the same for each level of date, if datepart months is placed on filters January to December will be tick-able options in the filter. This also means that conditions and top/bottom filters can be applied to datepart filters like any other dimension filter.

Datevalues placed on filters behave like measure filters. A min and a max date can be set and there is a relative dates option which allows you to choose things like only show the previous 3 months or years etc.

NEW QUESTION # 27

Broadly speaking, after an importing a dataset in Tableau Desktop, all fields in it are broken down into

- A. Numbers and Headers
- B. Rows and Columns
- C. Labels and Values
- D. Dimensions and Measures

Answer: D

Explanation:

When you connect to a new data source, Tableau assigns each field in the data source as dimension or measure in the Data pane, depending on the type of data the field contains. You use these fields to build views of your data.

Further,

NEW QUESTION # 28

Which of the following returns the Absolute Value of a given number?

- A. ZN(Number)
- B. ABS(Number)
- C. CEILING(Number)
- D. FLOOR(Number)

Answer: B

Explanation:

Explanation

From the official Tableau website:

□

NEW QUESTION # 29

.....
