試験の準備方法-正確なChrome-Enterprise-Administrator最新問題試験-最新のChrome-Enterprise-Administrator無料ダウンロード

Chrome-Enterprise-Administrator「Professional Chrome Enterprise Administrator Certification Exam」はGoogleの一つ認証試験として、もしGoogle認証試験に合格してIT業界にとっても人気があったので、ますます多くの人がChrome-Enterprise-Administrator試験に申し込んで、Chrome-Enterprise-Administrator試験は簡単ではなくて、時間とエネルギーがかかって用意しなければなりません。

Google Professional Chrome Enterprise Administrator Certification Exam 認定 Chrome-Enterprise-Administrator 試験問題 (Q40-Q45):

質問 # 40

The security team requires Chrome to be updated on computers that only have intranet access with no available internet connectivity. These computers cannot be restarted, and Chrome is not updating.
How can Chrome be updated?"

- A. Use a target version
- B. Run auto-update.
- C. Run the Chrome installer
- D. Use force relaunch after period

正解: C

解説:

For machines with no internet connectivity, automatic updates will not work. The only way to update Chrome in this scenario is to manually run the Chrome installer with an updated version obtained through an alternative method (e.g., downloaded on a connected machine and transferred). Auto-update requires internet access, setting a target version only dictates the desired version for automatic updates, and force relaunch requires an update to be downloaded first.

質問 # 41

An organization experiences a recent surge in account takeovers and suspicious activity. Upon investigation, a security team discovers that employees are falling victim to infostealer malware specifically designed to target Chrome browser cookies. This malware is spreading through phishing emails and compromised websites, and it is capable of stealing session cookies, login credentials, and other sensitive information stored in the browser. Which measure can an administrator implement using Chrome Enterprise Core to mitigate the risks posed by cookie theft?

- A. Block the use of third-party cookies
- **B. Require Enhanced Safe Browsing and enable Application Bound Encryption**
- C. Invalidate user's session cookies and tokens by resetting the sign-in cookies from the Google Admin console
- D. Disallow Chrome Sync and Require Incognito mode

正解: B

解説:

To combat cookie theft from infostealer malware, requiring "Enhanced Safe Browsing" provides proactive protection against malicious websites and downloads that might distribute such malware. Enabling "Application Bound Encryption" adds an extra layer of security to cookies and other sensitive data stored by Chrome, making them harder for malware to use even if stolen. Blocking third-party cookies (option A) can improve privacy but doesn't directly prevent malware from stealing first-party session cookies. Invalidating existing cookies (option C) is a reactive measure and doesn't prevent future theft. Disallowing Chrome Sync and requiring Incognito mode (option D) changes user behavior but doesn't inherently protect against malware on the local machine.

質問 # 42

Where can information about all of the profiles associated with a browser be found?

- A. Chrome log events
- B. Chrome Insights report
- **C. Managed browsers detail**
- D. Managed devices

正解: C

解説:

The "Managed browsers detail" page in the Google Admin console provides specific information about individual managed Chrome browser instances. This includes details about the profiles associated with that browser, such as the signed-in users and their management status. Chrome log events might contain some profile-related information but are more focused on actions. The "Managed devices" section primarily focuses on ChromeOS devices. The "Chrome Insights report" provides a high-level overview rather than detailed profile information for a specific browser instance.

質問 # 43

An organization uses Chrome Enterprise Core and needs to enforce specific security policies (e.g., disabling extensions, restricting website access) only for employee work-related browsing. Personal browsing should remain unrestricted. Which approach is most appropriate?

- **A. Require a managed profile for work-related browsing, applying the policies to only that profile**
- B. Use a single managed profile for all users, configuring separate work and personal bookmarks to manage access
- C. Use a managed browser and set exceptions for personal use in the enterprise policies
- D. Require a managed browser for work-related browsing, applying the policies to all browser windows

正解: A

解説:

The most granular and appropriate approach to apply work-related policies without affecting personal browsing is to use ****managed profiles****. By requiring users to use a specific managed profile for work purposes, administrators can enforce policies only within that profile. Personal browsing in a separate, unmanaged profile will remain unaffected. Option A would apply policies to all browsing, which is not the requirement. Option C relies on bookmarks, which is not a security enforcement mechanism. Option D is generally not feasible as enterprise policies are designed to be enforced, and setting reliable exceptions for personal use within a managed browser is complex and less secure than using separate profiles.

質問 # 44

Users in the organization report that browsers force a restart after a new update has been downloaded, which interrupts their work day. What could an engineer do to improve the experience while maintaining security?

- A. Add a quiet period to the Relaunch notification
- **B. Create a relaunch window in Relaunch notification**
- C. Change Chrome browser updates to only occur when a user checks
- D. Set the auto update check policy to occur during core work hours

正解: B

解説:

To minimize disruption while ensuring updates are applied, an engineer can configure a "Relaunch window" in the Relaunch notification settings. This allows users to be prompted to restart within a specific timeframe that is less likely to interrupt their critical work hours, giving them more control over when the restart occurs after an update. Disabling automatic updates (option A) would compromise security. Adding a quiet period (option B) only suppresses notifications, not the forced restart. Setting the auto-update check policy to occur during core work hours (option C) affects when updates are downloaded, not when the restart occurs.

質問 # 45
