

Customizable Juniper JN0-336 Practice Exam Software

DOWNLOAD the newest Pass4guide JN0-336 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1WIXRJzvOjbyjxbklenRumL5UAWXj5RYd>

Pass4guide is a trusted platform that is committed to helping Juniper JN0-336 exam candidates in exam preparation. The Juniper JN0-336 exam questions are real and updated and will repeat in the upcoming Juniper JN0-336 Exam. By practicing again and again you will become an expert to solve all the JN0-336 exam questions completely and before the exam time.

As a worldwide leader in offering the best JN0-336 test torrent, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in JN0-336 certification training application as well as interactive sharing and after-sales service. A good deal of researches has been made to figure out how to help different kinds of candidates to get Security, Specialist (JNCIS-SEC) certification. We revise and update the Security, Specialist (JNCIS-SEC) guide torrent according to the changes of the syllabus and the latest developments in theory and practice. We base the JN0-336 Certification Training on the test of recent years and the industry trends through rigorous analysis.

JN0-336 Simulation Questions | Test JN0-336 Dump

JN0-336 test guide is an examination material written by many industry experts based on the examination outlines of the calendar year and industry development trends. Its main purpose is to help students who want to obtain the certification of JN0-336 to successfully pass the exam. Compared with other materials available on the market, the main feature of JN0-336 Exam Materials doesn't like other materials simply list knowledge points. According to our statistics on the data so far, the passing rate of the students who have purchased one exam exceeds 99%, which is enough to see that JN0-336 test guide is a high-quality product that can help you to realize your dream.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q94-Q99):

NEW QUESTION # 94

Which statement about security policy schedulers is correct?

- A. A policy without a defined scheduler will not become active

- B. Multiple policies can use the same scheduler.
- C. A policy can have multiple schedulers.
- D. When the scheduler is disabled, the policy will still be available.

Answer: B

Explanation:

Schedulers can be defined and reused by multiple policies, allowing for more efficient management of policy activation and deactivation. This can be particularly useful for policies that need to be activated during specific time periods, such as business hours or maintenance windows.

NEW QUESTION # 95

Which two statements are true about application identification? (Choose two.)

- A. Application signatures are the same as IDP signatures.
- B. Application identification can identify nested applications that are within Layer 7.
- C. Application signatures are not the same as IDP signatures.
- D. Application identification cannot identify nested applications that are within Layer 7.

Answer: B,C

Explanation:

Application identification is a feature that enables SRX Series devices to identify and classify network traffic based on application signatures or custom rules. Application identification can enhance security, visibility, and control over network applications.

Two statements that are true about application identification are:

Application identification can identify nested applications that are within Layer 7: Nested applications are applications that run within another application protocol, such as HTTP or SSL. For example, Facebook or YouTube are nested applications within HTTP.

Application identification can identify nested applications by inspecting the application payload and matching it against predefined or custom signatures.

Application signatures are not the same as IDP signatures: Application signatures are patterns of bytes or strings that uniquely identify an application protocol or a nested application. IDP signatures are patterns of bytes or strings that indicate an attack or an exploit against a vulnerability. Application signatures are used for application identification and classification, while IDP signatures are used for intrusion detection and prevention.

NEW QUESTION # 96

Which two statements are correct about the fab interface in a chassis cluster? (Choose two.)

- A. In an active/active configuration, inter-chassis transit traffic is sent over the fab interface.
- B. The fab interface enables configuration synchronization.
- C. Heartbeat signals sent on the fab interface monitor the health of the control plane link.
- D. Real-time objects (RTOs) are exchanged on the fab interface to maintain session synchronization.

Answer: A,D

Explanation:

The fab interface is a fabric link that connects the two nodes in a chassis cluster. A chassis cluster is a high-availability feature that groups two identical SRX Series devices into a cluster that acts as a single device.

The fab interface has two functions:

Real-time objects (RTOs) are exchanged on the fab interface to maintain session synchronization: RTOs are data structures that store information about active sessions, such as source and destination IP addresses, ports, protocols, and security policies. RTOs are exchanged between the nodes on the fab interface to ensure that both nodes have the same session information and can take over the traffic in case of a failover.

In an active/active configuration, inter-chassis transit traffic is sent over the fab interface: In an active/active configuration, both nodes in a cluster can process traffic for different redundancy groups (RGs). RGs are collections of interfaces or services that fail over together from one node to another. If traffic needs to transit from one RG to another RG that is active on a different node, it is sent over the fab interface.

NEW QUESTION # 97

You are currently using a third-party threat analyzer. You want your SRX Series device to send decrypted SSE traffic to..... In this scenario, which feature should you configure on the SRX device?

- A. Phase 2 proxy ID
- B. SSL decryption mirroring
- C. IPS IPanotify action
- D. JSA vulnerability assessment

Answer: C,D

NEW QUESTION # 98

You are implementing an SRX Series device at a branch office that has low bandwidth and also uses a cloud-based VoIP solution with an outbound policy that permits all traffic.

Which service would you implement at your edge device to prioritize VoIP traffic in this scenario?

- A. AppQoE
- B. AppQoS
- C. AppFW
- D. SIP ALG

Answer: B

Explanation:

The service that you would implement at your edge device to prioritize VoIP traffic in this scenario is AppQoS. AppQoS is a feature that enables you to allocate bandwidth and prioritize traffic based on application signatures or custom rules. AppQoS can enhance the quality of service and experience for critical or latency-sensitive applications, such as VoIP. You can configure AppQoS policies to assign different classes of service (CoS) values or queue numbers to different applications or traffic flows. You can also define bandwidth limits, guarantees, or bursts for each class or queue. Reference: =

NEW QUESTION # 99

.....

To improve our products' quality we employ first-tier experts and professional staff and to ensure that all the clients can pass the test we devote a lot of efforts to compile the JN0-336 study materials. Even if you unfortunately fail in the test we won't let you suffer the loss of the money and energy and we will return your money back at the first moment. After you pass the JN0-336 test you will enjoy the benefits the certificate brings to you such as you will be promoted by your boss in a short time and your wage will surpass your colleagues.
