If you are working all the time, and you hardly find any time to prepare for the Salesforce-Data-Cloud exam, then ExamDumpsVCE present the smart way to Salesforce-Data-Cloud exam prep for the exam. You can always prepare for the Salesforce-Data-Cloud test whenever you find free time with the help of our Salesforce-Data-Cloud Pdf Dumps. We have curated all the Salesforce-Data-Cloud questions and answers that you can view the exam Salesforce-Data-Cloud PDF brain dumps and prepare for the exam. We guarantee that you will be able to pass the Salesforce-Data-Cloud in the first attempt.

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing Salesforce-Data-Cloud certification can help you realize these goals and find a good job with high income. If you buy our Salesforce-Data-Cloud practice test you can pass the exam successfully and easily. The purchase procedures are safe and we protect our client's privacy. We provide 24-hours online customer service and free update within one year. If you fail in the exam, we will refund you immediately. All in all, there are many advantages of our Salesforce-Data-Cloud Training Materials.

## Salesforce Data Cloud Accredited Professional Exam Passing Score Pass for sure

There is no exaggeration that you can be confident about your coming exam just after studying with our Salesforce-Data-Cloud preparation materials for 20 to 30 hours. Tens of thousands of our customers have benefited from our exam materials and passed their exams with ease. The data showed that our high pass rate is unbelievably 98% to 100%. Without doubt, your success is 100% guaranteed with our Salesforce-Data-Cloud training guide. You will be quite surprised by the convenience to have an overview just by clicking into the link, and you can experience all kinds of Salesforce-Data-Cloud versions.

## Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q38-Q43):

### NEW QUESTION # 38

Cloud Kicks plans to do a full deletion of one of its existing data streams and its underlying data lake object (DLO). What should the consultant consider before deleting the data stream?

- A. The data stream must be associated with a data kit.
- B. The underlying DLO cannot be mapped to a data model object.
- C. The underlying DLO can be used in a data transform
- D. The data stream can be deleted without implicitly deleting the underlying DLO.

**Answer: C**

Explanation:

Data Streams and DLOs: In Salesforce Data Cloud, data streams are used to ingest data, which is then stored in Data Lake Objects (DLOs).

Deletion Considerations: Before deleting a data stream, it's crucial to consider the dependencies and usage of the underlying DLO.

Data Transform Usage:

Impact of Deletion: If the underlying DLO is used in a data transform, deleting the data stream will affect any transforms relying on that DLO.

Dependency Check: Ensure that the DLO is not part of any active data transformations or processes that could be disrupted by its deletion.

### NEW QUESTION # 39

Northern Trail Outfitters (NTO) asks its Data Cloud consultant for a list of contacts who fit within a certain segment for a mailing campaign.

How should the consultant provide this list to NTO?

- A. Create the segment, select Email as the activation target, and activate the segment directly to NTO.
- B. Create the segment and then activate the segment to NTO's Salesforce CRM.
- C. Create the segment and then click Download to obtain the segment membership details to provide to NTO.
- D. Create a new file storage activation target, create the segment, and then activate the segment to the new activation target.

**Answer: A**

### NEW QUESTION # 40

A retail customer wants to bring customer data from different sources and wants to take advantage of Identity Resolution so that it can be used in Segmentation. On which entity should this be segmented for activation membership?

- A. Unified Individual
- B. Individual
- C. Unified Contact
- D. Subscriber

**Answer: A**

Explanation:

The Unified Individual entity represents the result of Identity Resolution, which links together multiple records of an individual from different sources into a single profile<sup>4</sup>. This entity can be used for Segmentation and Activation, as it provides a complete and accurate view of each customer.

**NEW QUESTION # 41**

The Salesforce CRM Connector is configured and the Case object data stream is set up. Subsequently, a new custom field named Business Priority is created on the Case object in Salesforce CRM. However, the new field is not available when trying to add it to the data stream.

Which statement addresses the cause of this issue?

- A. The Salesforce Data Loader application should be used to perform a bulk upload from a desktop.
- **B. The Salesforce Integration User Is missing Read permissions on the newly created field.**
- C. Custom fields on the Case object are not supported for ingesting into Data Cloud.
- D. After 24 hours when the data stream refreshes it will automatically include any new fields that were added to the Salesforce CRM.

**Answer: B**

Explanation:

The Salesforce CRM Connector uses the Salesforce Integration User to access the data from the Salesforce CRM org. The Integration User must have the Read permission on the fields that are included in the data stream. If the Integration User does not have the Read permission on the newly created field, the field will not be available for selection in the data stream configuration. To resolve this issue, the administrator should assign the Read permission on the new field to the Integration User profile or permission set. **NEW QUESTION # 42**

A consultant needs to create a data graph based on several DLOs,

Which step should the consultant take to make this work?

- A. Use a data action to update the data graph with the DLO data
- B. Map the DLOs directly to a data graph.
- **C. Map the DLOs to DMOs and use these in the data graph.**
- D. Batch transform the DLOs to multiple DMOs and activate these with the data graph.

**Answer: C**

Explanation:

To create a data graph based on several Data Lake Objects (DLOs) , the consultant should map the DLOs to Data Model Objects (DMOs) and use these in the data graph. Here's why:

Understanding Data Graphs

A data graph in Salesforce Data Cloud represents relationships between entities (e.g., customers, accounts, orders) and their attributes.

It is built using Data Model Objects (DMOs) , which provide a standardized structure for unified profiles and related data.

Why Map DLOs to DMOs?

Role of DLOs and DMOs :

DLOs are raw data sources ingested into Data Cloud.

DMOs are standardized objects used for identity resolution and unified profiles.

Mapping DLOs to DMOs ensures that raw data is transformed into a structured format suitable for data graphs.

Building the Data Graph :

Once the DLOs are mapped to DMOs, the consultant can use the DMOs to define relationships and build the data graph.

This approach ensures consistency and alignment with the unified data model.

Other Options Are Less Suitable :

A). Use a data action to update the data graph with the DLO data : Data actions are used for triggering workflows, not for building data graphs.

C). Map the DLOs directly to a data graph : DLOs cannot be directly mapped to a data graph; they must first be transformed into DMOs.

D). Batch transform the DLOs to multiple DMOs and activate these with the data graph : This is overly complex and unnecessary

when mapping DLOs to DMOs suffices.

Steps to Create the Data Graph

Step 1: Map DLOs to DMOs

Navigate to Data Cloud > Data Streams and map the relevant fields from the DLOs to the corresponding DMOs.

Step 2: Define Relationships

Use the Data Model tab to define relationships between DMOs (e.g., linking Individuals to Accounts).

Step 3: Build the Data Graph

Use the mapped DMOs to create the data graph, defining nodes (entities) and edges (relationships).

Step 4: Validate the Graph

Test the data graph to ensure it accurately represents the desired relationships and data flow.

Conclusion

The consultant should map the DLOs to DMOs and use these in the data graph to ensure a structured and consistent approach to building relationships between entities.

## NEW QUESTION # 43

.....

Nowadays, it is widely believed that getting a certificate is quite important for some jobs. Salesforce-Data-Cloud Exam Braindumps contain the main knowledge of the exam, and it will help you pass the exam. Salesforce-Data-Cloud exam dumps not only have the quality, but also have the quantity, and it's enough for you to practice. What's more, we respect the private information of the buyers, your personal information such as the name or email address will be protected well.
