

Appian ACD201 Valid Test Tutorial - ACD201 Latest Test Testking

What's more, part of that Prep4sureGuide ACD201 dumps now are free: <https://drive.google.com/open?id=1JZT4EeaEtf6rYmGBvHL87Gt6cM0RLXM6o>

Different from the common question bank on the market, ACD201 exam guide is a scientific and efficient learning system that is recognized by many industry experts. In normal times, you may take months or even a year to review a professional exam, but with ACD201 exam guide you only need to spend 20-30 hours to review before the exam. And with ACD201 learning question, you will no longer need any other review materials, because our study materials already contain all the important test sites. At the same time, ACD201 Test Prep helps you to master the knowledge in the course of the practice. And at the same time, there are many incomprehensible knowledge points and boring descriptions in the book, so that many people feel a headache and sleepy when reading books. But with ACD201 learning question, you will no longer have these troubles.

Our ACD201 study materials are written by experienced experts in the industry, so we can guarantee its quality and efficiency. The content of our ACD201 learning guide is consistent with the proposition law all the time. We can't say it's the best reference, but we're sure it won't disappoint you. This can be borne out by the large number of buyers on our website every day. A wise man can often make the most favorable choice, I believe you are one of them. If you are not at ease before buying our ACD201 Actual Exam, we have prepared a free trial for you. Just click on the mouse to have a look, giving you a chance to try. Perhaps this choice will have some impact on your life.

100% Pass 2026 Newest Appian ACD201: Appian Senior Developer Valid Test Tutorial

After you used Prep4sureGuide Appian ACD201 Dumps, you still fail in ACD201 test and then you will get FULL REFUND. This is Prep4sureGuide's commitment to all candidates. What's more, the excellent dumps can stand the test rather than just talk about it. Prep4sureGuide test dumps can completely stand the test of time. Prep4sureGuide present accomplishment results from practice of all candidates. Because it is right and reliable, after a long time, Prep4sureGuide exam dumps are becoming increasingly popular.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 2	<ul style="list-style-type: none"> Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 3	<ul style="list-style-type: none"> Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 4	<ul style="list-style-type: none"> Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.

Appian Senior Developer Sample Questions (Q83-Q88):

NEW QUESTION # 83

An insurance application has a dashboard in which all the cases with "Accident" case type and "Health Insurance" insurance type are displayed to the user, using the following query:

```

alquery(
  logicalExpression: alqueryLogicalExpression(
    operator: "AND",
    filters: {
      alqueryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"
      ),
      alqueryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"
      )
    }
  ),
  pagingInfo: a(pagingInfo(
    startIndex: 1,
    batchSize: 10,
    sort: alsortInfo(
      field: "IssueDate"
    )
  ))
)

```

You need to update the query entity to display all the cases that are "Accident" case type and "Health Insurance" insurance type, or created in the last ten days.

What is the right configuration for the logical expression?

```

alqueryLogicalExpression(
  operator: "AND",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  },
  logicalExpressions: alqueryLogicalExpression(
    operator: "OR",
    filters: alqueryFilter(
      field: "createdDate",
      value: today() - 10,
      operator: ">="
    )
  )
)

```

• A.

```

alqueryLogicalExpression(
  operator: "AND",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  },
  alqueryFilter(
    field: "createdDate",
    value: today() - 10,
    operator: ">="
  )
)

```

• B.

```

operator: "OR",
filters: alqueryFilter(
  field: "createdDate",
  value: today() - 10,
  operator: ">="
),
logicalExpressions: alqueryLogicalExpression(
  operator: "AND",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  }
)

```

• C.

Answer: C

Explanation:

A filter for `createdDate >= today() - 10` (records created in the last 10 days).

A nested AND logical expression that requires both `caseType = "Accident"` and `insuranceType = "Health Insurance"`.

NEW QUESTION # 84

You're developing a functionality to manage transactions for an insurance company. Each transaction can have multiple items where respective item type and item amount can be entered. The amount entered can be either negative or positive, and is a decimal data type with a precision of 8 and a scale of 2.

A maximum of 10 items can be entered for a transaction. Once all the items are entered, you need to calculate and show the sum of all items' total amounts at the transaction level.

What is the best way to calculate and display the sum of all item amounts?

- A. `text(sum(ri!items.amount),"00.00")`
- B. `fixed(sum(ri!items.amount),2,false())`
- C. `round(sum(ri!items.amount),2)`

Answer: B

Explanation:

`fixed(sum(ri!items.amount),2,false())` is the best option because it returns the sum as a text value formatted to exactly two decimal places, which is ideal for currency or financial amounts. This ensures the total displays correctly as a string, maintaining precision and formatting for both positive and negative values.

NEW QUESTION # 85

A view is created with the primary table PERSON and is joined using a left join with the APPOINTMENT table on the column "PERSON_ID". There is a one-to-many relationship between the PERSON and APPOINTMENT tables.

A Custom Data Type (CDT) and a data store entity have been created based on this view, with the primary key being "PERSON_ID".

Review the data presented in the PERSON and APPOINTMENT tables:

PERSON_ID	PERSON_NAME
1101	John Doe
1102	Jane Doe
1103	Richard Doe

APPOINTMENT_ID	PERSON_ID	STATUS
428	1101	Completed
429	1102	Completed
430	1101	New
431	1103	Completed
432	1101	New
433	1102	New
434	1101	New

Which two statements are true when the following query entity is executed? (Choose two.)

```

a:queryEntity(
  entity: cons!ABC_PERSON_APPOINTMENT_VIEW_DSE,
  query: alquery(
    logicalExpression: alqueryLogicalExpression(
      operator: "AND",
      filters: {
        alqueryFilter(
          field: "STATUS",
          operator: "=",
          value: "New"
        )
        alqueryFilter(
          field: "PERSON_ID",
          operator: "=",
          value: "1101"
        )
      }
    )
  ),
  pagingInfo: alpagingInfo(
    startIndex: 1,
    batchSize: 1,
    sort: alsortInfo(field: "PERSON_ID")
  )
),
fetchTotalCount: true()
)

```

- A. result totalCount is 3
- B. Appian makes one more query to the database (other than the actual query to fetch the data) to get the totalCount based on the applied filters.
- C. Appian makes one more query to the database (other than the actual query to fetch the data) to get the totalCount based on the applied filters and paging info.
- D. result totalCount is 1

Answer: B,D

Explanation:

Appian makes an additional query to the database (other than the main query for data) to retrieve the totalCount when fetchTotalCount: true() is used.

The result totalCount is 1, as there is only one person (PERSON_ID 1101) being filtered, even though there are multiple "New" appointments for that person; with a CDT based on PERSON_ID as the primary key, only one row is counted per person.

NEW QUESTION # 86

There are two record types, ABC and XYZ, with sync enabled. The XYZ record type is added as a relationship into the ABC record type.

A user has Viewer permission to the ABC record type but does not have access to the XYZ record type.

A site page is presented to the user where the data is sourced from the ABC record type and its related record type the XYZ reference.

What information does the user see on the site page?

- A. Page is presented to the user with the XYZ record type data and fields references redacted.
- B. Page is presented to the user and the data references to the XYZ record type appear as "null".
- C. Page does not load and an error message is presented: "The record type [identifier=XYZ] does not exist, has been deleted, or you do not have sufficient privileges to access its data."

Answer: C

Explanation:

Because the interface references fields on the XYZ record type, the user must have at least Viewer permission on XYZ as well as on ABC. Since the user lacks access to XYZ, the query cannot be executed and the page fails to load, displaying the error:

"The record type [identifier = XYZ] does not exist, has been deleted, or you do not have sufficient privileges to access its data."

NEW QUESTION # 87

You're creating a new entity-backed record type without data sync enabled. Users in the "ACME Supervisors" group must be able to access the Delete Case related action on the record summary view.

What are two valid steps that you should perform to grant users the appropriate access?

- A. Update the record action security for "Delete Case" and include the "ACME Supervisors" group within the visibility settings.
- B. Add the "ACME Supervisors" group as a Viewer to the data store mapped to the record.

- C. Add the "ACME Supervisors" group as a member of the "Database Editors" group and grant DELETE privileges.
- D. Grant Viewer permissions to the underlying interface object for the Summary view.

Answer: A,C

Explanation:

Adding "ACME Supervisors" as members of "Database Editors" with DELETE privileges allows them to perform delete operations. Updating the "Delete Case" record action security and including "ACME Supervisors" in the visibility settings ensures they have access to the related action on the record summary view.

NEW QUESTION # 88

.....

Our research and development team not only study what questions will come up in the ACD201 exam, but also design powerful study tools like exam simulation software. The content of our ACD201 practice materials is chosen so carefully that all the questions for the exam are contained. And our ACD201 study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for ACD201 exam efficiently.
