## Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q90-Q95):

### NEW QUESTION # 90

Why is it important to verify the update status after the initial upgrade process when upgrading firmware on a Cisco UCS C-Series server using the Host UpgradeUtility?

- A. To activate the new licenses associated with the firmware
- B. To generate a report for compliance documentation
- C. To ensure compatibility with third-party applications
- **D. To confirm that all intended components were successfully updated**

**Answer: D**

Explanation:

After upgrading the firmware on a Cisco UCS C-Series server using the Host Upgrade Utility (HUU), it is critical to verify the update status to ensure that all targeted components (such as BIOS, CIMC, and RAID controller firmware) have been successfully updated. Firmware upgrades often involve multiple subsystems, and partial or failed updates can result in inconsistencies or even device

instability. Verifying the update status allows the technician to identify any missed components and perform corrective actions if necessary.

Options like generating compliance reports, third-party application checks, or license activations are not the primary reasons for this verification step in the HUU process.

### NEW QUESTION # 91

Which two components are accessed by removing the chassis cover on Cisco Catalyst 8000 Series Edge platforms? (Choose two.)

- A. SSDs
- B. Network Interface Modules
- C. Transceivers
- D. Fan trays
- E. DIMMs

**Answer: A,E**

Explanation:

On Cisco Catalyst 8000 Series Edge platforms, removing the chassis cover provides access to internal components such as DIMMs (Dual In-line Memory Modules) and SSDs (Solid-State Drives). These components are located internally and require the removal of the chassis cover for maintenance or replacement.

DIMMs are used for system memory and are essential for the router's operation.

SSDs provide storage for system software and configurations.

Other components like Network Interface Modules (NIMs) and transceivers are typically accessible externally and do not require chassis cover removal.

### NEW QUESTION # 92

Refer to the exhibit. Drag and drop the names of the field-replaceable units from the left onto the corresponding letters on the image of the Cisco Catalyst 9400 modular switch.

**Answer:**

Explanation:

### NEW QUESTION # 93

Drag and drop the steps of the boot sequence process of a Cisco device into order on the right.

**Answer:**

Explanation:

Explanation:

Step 1 # Performs power-on self-test (POST)

Step 2 # Loads and runs bootstrap code (firmware)

Step 3 # Finds and loads the Cisco IOS software

Step 4 # Finds and loads the configuration

Step 5 # Runs the configured Cisco IOS software

This startup process is thoroughly described in the FLDTEC course and aligns with Cisco's standard IOS boot process:

\* POST (Power-On Self-Test): Verifies hardware functionality including memory and interfaces. This occurs immediately upon powering the device.

\* Bootstrap Code Execution: Bootstrap is a small program in ROM that initiates the boot process.

\* Cisco IOS Loading: Bootstrap locates and loads the IOS from flash memory or another source (e.g., TFTP).

\* Configuration Loading: The router then loads the startup-config from NVRAM (if available).

\* IOS Execution: Once the configuration is loaded, the device enters operational mode and executes the IOS with the loaded config. This sequence is vital for field technicians to understand for troubleshooting boot failures or performing device recoveries.

### NEW QUESTION # 94

What is the primary advantage of the Cisco Intersight cloud-based approach compared to traditional on-premises management tools?

- A. It offers better integration with non-Cisco products
- B. It provides faster hardware upgrades
- C. It requires less local storage
- **D. It allows management from anywhere without on-premises software**

**Answer: D**

Explanation:

The main advantage of Cisco Intersight is its cloud-based architecture, which allows IT administrators to manage infrastructure from any location without needing to install or maintain traditional on-premises management tools.

This provides:

Centralized visibility and control over UCS servers and HyperFlex infrastructure Remote firmware upgrades and configuration Policy-driven automation Unlike on-premises tools, Intersight eliminates the overhead of maintaining dedicated infrastructure for management.
