## Salesforce Certified Experience Cloud Consultant Sample Questions (Q25-Q30):

### NEW QUESTION # 25

Dreamscape Flowers (DF) has a community for its flower growers. DF now wants to create communities for its franchisee network as well as direct B2C customers as part of a company-wide digital transformation.

Other subsidiaries of DF are also undergoing digital transformation and are interested in setting up similar communities based on DF's approach.

In what two ways can Lightning Bolt help DF accomplish this?

Choose 2 answers

- A. Lightning Bolts can help minimize licensing and provisioning cost.
- **B. Lightning Bolts can help reduce implementation time.**
- **C. Lightning Bolts can be distributed and reused.**
- D. Lightning Bolts can help organize, manage, and reuse digital content.

**Answer: B,C**

Explanation:

Two ways that Lightning Bolt can help DF accomplish this are A and B. Lightning Bolt is a framework that allows you to create and distribute industry-specific solutions that include prebuilt themes, templates, pages, components, and business logic. By using Lightning Bolt, DF can create a solution for its flower business that includes all the features and functionality they need for their communities. They can then distribute and reuse this solution for their subsidiaries or other customers who want to set up similar communities. This can help reduce implementation time and ensure consistency and quality across different communities.

#### **NEW QUESTION # 26**

Cloud Kicks has noticed its new Experience Cloud site is taking a long time to load.

Which tool should the system administrator use to troubleshoot the problem?

- A. Lightning Page Maximizer
- B. Cloud Network Optimization Bolt
- **C. Salesforce Community Page Optimizer**
- D. Experience Cloud Performance Profiler

**Answer: C**

Explanation:

To troubleshoot the problem of the site taking a long time to load, the system administrator should use Salesforce Community Page Optimizer. This is a tool that analyzes the performance of an Experience Cloud site and provides recommendations for improving the page load time. The tool checks for issues such as component density, image size, caching settings, and network latency.

#### **NEW QUESTION # 27**

Ursa Major Solar would like to use three Record Detail components on a page to display object details for the Account, Case, and Opportunity objects for the user who is logged in to the company's portal. When they drop the components on the page, they are not getting the desired results.

What is causing this issue?

- A. The Record Detail component is a custom component and was not configured correctly
- B. The Record Detail component populates the record associated with the object for the page template so this component will only work on the Home page template
- C. The Record Detail component will only show record details for the Case object.
- **D. The Record Detail component populates the recordID associated with the object for the page template, so this component will not work for this use case.**

**Answer: D**

Explanation:

The reason for this issue is that the Record Detail component populates the recordID associated with the object for the page template, so this component will not work for this use case. The Record Detail component is a component that displays the fields and values of a record on your Experience Cloud site. The recordID is a unique identifier that specifies which record to display. The Record Detail component uses the recordID associated with the object for the page template, which means that it can only display one record per object per page. For example, if you have a page template for Account, you can only display one Account record on that page using the Record Detail component. To display multiple records of different objects on a page, you need to use other components, such as Related List or Record List.

### NEW QUESTION # 28

DreamHouse Realty (DR) plans to expand its business by offering insurance products to home buyers. DR will use its network of independent agents to manage claims in their region. Agents will need to work with DR on settlement and adjustment approvals. What should the Experience Cloud consultant recommend?

- A. Create a digital experience for agents and share the URL with employees.
- B. Create a peer-to-peer forum for agents and share the URL with employees.
- C. Create a self-service community for agents and an app for employees.
- **D. Create a digital experience for agents and an app for employees.**

**Answer: D**

Explanation:

The Experience Cloud consultant should recommend creating a digital experience for agents and an app for employees. A digital experience is a branded online destination that allows you to connect with your customers, partners, or employees. An app is a collection of items that work together to serve a particular function. By creating a digital experience for agents, DR can offer them a portal where they can manage claims, access resources, and collaborate with DR employees. By creating an app for employees, DR can provide them with a workspace where they can approve settlements and adjustments, view reports and dashboards, and communicate with agents.

### NEW QUESTION # 29

Cloud Kicks (CK) has built a site using Salesforce Experience Builder. The CTO of CK wants to give customers the ability to log in to the site using their Google credentials. CK also wants to access customers' basic Google profile data when they log in so the company can serve content that matches customers' interests. How should the Experience Cloud consultant implement this?

- A. Create a custom self-registration page and a custom login page by using Visualforce and Apex controllers.
- **B. Create an Authentication Provider by choosing Google as the provider type and add relevant parameters to access the customers' basic profile data.**
- C. Create a custom login page using Lightning components and use the Google REST API to access customers' basic profile data.
- D. Set up a login flow for communities that accepts the customers' Google credentials and matches with the credentials stored on the user records in Salesforce.

**Answer: B**

Explanation:

This option allows CK to use Google as an external identity provider and enable customers to log in to the site using their Google credentials. CK can also access customers' basic profile data, such as name, email, and picture, by specifying the scopes and attributes in the authentication provider settings. CK can also use the authentication provider to configure single sign-on (SSO) and just-in-time (JIT) provisioning for the site.

### NEW QUESTION # 30

.....
