Pass Guaranteed 2026 Cisco Unparalleled 200-901: Exam DevNet Associate Exam Guide

We have an authoritative production team, after you purchase 200-901 study materials, our professions can consolidate important knowledge points for you, and we guarantee that your 200-901 practice quiz is tailor-made. The last but not least, we can provide you with a free trial service, so that customers can fully understand our format before purchasing our 200-901 training guide, which can be an unparalleled trial experience compared to other counterparts.

Cisco DevNet Associate Exam Sample Questions (Q347-Q352):

NEW QUESTION # 347

Which two commands download and execute an Apache web server container in Docker with a port binding 8080 in the container to 80 on the host? (Choose two.)

- A. `docker run -p 80:8080 httpd`
- B. `docker pull apache`
- C. `docker run -p 8080:80 httpd`
- D. `docker pull httpd`
- E. `docker pull https`

Answer: C,D

Explanation:

To download and execute an Apache web server container in Docker, you need to perform two steps: pulling the image and running

the container with the appropriate port bindings.

`docker pull httpd` - This command downloads the Apache HTTP server image from the Docker repository. "httpd" is the official name for the Apache HTTP server image on Docker Hub.

`docker run -p 8080:80 httpd` - This command runs a new container from the "httpd" image, mapping port 8080 on the host to port 80 in the container. This allows you to access the web server running in the container via port 8080 on your host machine.

Reference:

Docker Documentation - `docker pull`

Docker Documentation - `docker run`

NEW QUESTION # 348

Refer to the exhibit.

What caused the error in this API request?

- A. The submitted JSON payload includes a field that is not supported by the API resource.
- B. The API resource does not support JSON format payloads.
- C. The API resource does not support the POST operation
- **D. The submitted JSON payload has a formatting issue**

Answer: D

NEW QUESTION # 349

Refer to the exhibit.

Fill in the blanks to complete the cURL command to the list of networks in the Meraki organization with an id of 384279060

Answer:

Explanation:

`organizations , 384279060 , networks`

Explanation

Solution below

NEW QUESTION # 350

Refer to the exhibit.

A developer creates a Python script that queries Cisco Webex. When the script is executed, a 401 code is returned. After troubleshooting, the developer discovers that the service is missing privileges. Which change to the header in line 4 of the script results in the code 200?

- **A.**
- B.
- C.
- D.

Answer: A

Explanation:

The 401 Unauthorized status code indicates that the request lacks valid authentication credentials. When using OAuth2 for authenticating with the Cisco Webex API, the correct approach is to include a Bearer token in the Authorization header.

Option A:

```
header = {"Authorization": "Bearer YOUR_TOKEN"}
```

This option correctly formats the Authorization header, which is necessary for the Webex API to authenticate the request. The Bearer token is a type of token used by OAuth2 to access protected resources.

Authorization Header: The header must contain the key "Authorization" with the value formatted as "Bearer YOUR_TOKEN".

Bearer Token: The Bearer keyword followed by a space and the token itself is the correct way to pass the OAuth2 token in the header.

Other Options:

Option B:

Incorrect because it uses "Authentication" instead of "Authorization".

Option C:

Incorrect because it combines Authentication and Bearer incorrectly without a space.

Option D:

Incorrect for the same reason as Option C.

Reference:

Cisco Webex API Authentication

OAuth2 Authorization Header =====

NEW QUESTION # 351

Refer to the exhibit.

Drag and drop the code from the bottom onto the blanks in the code to construct a cURL command using the Cisco DNA Center API, which will provide the details of a WLAN controller with Id af397748444. Not all options are used.

Answer:
