VMware 2V0-11.25 Exam Braindumps | Exam 2V0-11.25 Collection Pdf

Our 2V0-11.25 study guide has three formats which can meet your different needs: PDF, software and online. If you choose the PDF version, you can download our study material and print it for studying everywhere. With our software version of 2V0-11.25 exam material, you can practice in an environment just like the real examination. And you will certainly be satisfied with our online version of our 2V0-11.25 training quiz. It is more convenient for you to study and practice anytime, anywhere.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q145-Q150):

NEW QUESTION # 145

An administrator needs to ensure that network traffic is protected from interception and tampering during VM migration activities. What feature or setting should the administrator enable to achieve this?

- A. Encrypted vSphere vMotion
- B. vSphere HA
- C. vSphere DRS
- D. vSphere Virtual Machine Encryption

Answer: A

Explanation:

Encrypted vSphere vMotion ensures that network traffic is protected from interception and tampering during VM migration activities by encrypting the vMotion traffic. This feature secures the transfer of virtual machines across hosts in the vSphere environment.

NEW QUESTION # 146

Which feature of VMware Lifecycle Manager allows an administrator to manage the lifecycle of ESXi hosts by applying a consistent image across the hosts in a cluster?

- A. Update Manager Baselines
- B. Lifecycle Manager Images
- C. Host Profiles
- D. vSphere Auto Deploy

Answer: B

Explanation:

VMware Lifecycle Manager (vLCM) enables administrators to manage the lifecycle of ESXi hosts by applying a consistent image across the hosts in a cluster. These images include the ESXi version, firmware, drivers, and settings, ensuring consistency and simplifying updates and patches across all hosts in a cluster.

NEW QUESTION # 147

Which feature of VMware Data Services Manager enhances security and compliance?

- A. Storage replication
- B. Automated workload migration
- C. Database level authentication
- D. Network traffic encryption

Answer: C

Explanation:

VMware Data Services Manager™ offers modern database and data services management for vSphere. It is a solution that provides a data-as-a-service toolkit for on-demand provisioning and automated management of PostgreSQL and MySQL databases in vSphere environment. <https://techdocs.broadcom.com/us/en/vmware-cis/dsm/data-services-manager/2-1/about-vmware-data-services-manager.html>

NEW QUESTION # 148

An administrator is unable to log in to the SDDC Manager UI on their local workstation. After entering the correct URL, the login page does not load and the administrator is unable to enter their credentials in order to view the SDDC Manager inventory. They confirm that the SDDC Manager appliance responds to a ping command from their local workstation against both its FQDN and IP address.

After checking the VM console of the SDDC Manager appliance in the management vCenter UI, they determine that the operating system is online and they can log in to it with the relevant administrator level accounts.

What two actions could the administrator take whilst logged in to the SDDC Manager VM via the VM console to help identify the root cause of the UI not loading? (Choose two.)

- A. Perform a restart of the network adapter using the command `systemctl restart`.
- B. Verify the health of the SDDC Manager services using the command `sos --get-vcf-services-summary`.
- C. Verify that there is free disk space remaining using the command `df -h`.
- D. Verify that port 80 is open and listening for connections using the command `netstat`.
- E. Perform a restart of the services using the command `systemctl restart`.

Answer: B,C

Explanation:

According to the VMware Cloud Foundation 5.2 Administration Guide and troubleshooting documentation, when the SDDC Manager UI does not load even though the appliance is reachable and online, administrators should check both the health of services and the system resources. Here's the detailed reasoning and exact documentation extracts:

Option C: Verify the health of the SDDC Manager services using the command `sos --get-vcf-services- summary`. Official documentation states:

"You can check the status of SDDC Manager services by running the `sos` command on the SDDC Manager VM. This command provides a summary of all SDDC Manager services and their current state. If any service is stopped or unhealthy, this may prevent the UI from loading." Reference: VMware Cloud Foundation 5.2 Administration Guide - Troubleshooting SDDC Manager Option E: Verify that there is free disk space remaining using the command `df -h`. Official documentation specifies:

"If the SDDC Manager appliance runs out of disk space, the UI and related services may become unresponsive. Use the `df -h` command to check for available disk space on the appliance." Reference: VMware Cloud Foundation 5.2 Administration Guide - SDDC Manager Appliance Health Why Not the Other Options?

Option A: Port 80 is not used for the SDDC Manager UI; the UI listens on port 443 (HTTPS).

Option B and D: Restarting the network adapter or services without first identifying the root cause is not a recommended troubleshooting step according to the official documentation.

Summary: The administrator should check the SDDC Manager services health (C) and ensure there is free disk space (E) on the appliance, as recommended by the VMware official documentation for troubleshooting UI access issues in VMware Cloud Foundation 5.2.

NEW QUESTION # 149

An administrator is responsible for maintaining a VMware Cloud Foundation (VCF) instance. The administrator has been tasked with scaling the CPU and RAM resources of a virtual machine.

Which three configuration limitations must the administrator consider when completing the task? (Choose three.)

- A. To enable the CPU Hot Add or Memory Hot Add feature, the virtual machine must be powered off.
- B. To remove Memory to a powered on virtual machine, Memory Hot Add must be enabled.
- C. To add Memory to a powered on virtual machine, Memory Hot Add must be enabled.
- D. To enable Memory Hot Add feature, the virtual machine compatibility must be ESXi 7.0 Update 2 or later.
- E. To add vCPUs to a powered on virtual machine CPU Hot Add must be enabled.
- F. To add vCPUs to a powered down virtual machine, CPU Hot Add must be enabled.

Answer: A,C,E

Explanation:

Memory Hot Add must be enabled before you can add RAM to a running VM.

CPU Hot Add must be enabled before adding vCPUs to a powered-on VM.

You can only toggle the Hot Add features (CPU or Memory) when the VM is powered off.

NEW QUESTION # 150

.....

There are a lot of excellent experts and professors in our company. The high quality of the 2V0-11.25 reference guide from our company resulted from their constant practice. After a long period of research and development, our 2V0-11.25 test questions have been the leader study materials in the field. We have taken our customers' suggestions of the 2V0-11.25 Exam Prep seriously, we have tried our best to perfect the 2V0-11.25 reference guide from our company just in order to meet the need of these customers well. So stop hesitation and buy our 2V0-11.25 study materials.
