

Quiz 2026 Authoritative CrowdStrike Reliable IDP Exam Simulations

It is understandable that different people have different preference in terms of IDP study guide. Taking this into consideration, and in order to cater to the different requirements of people from different countries in the international market, we have prepared three kinds of versions of our IDP Preparation questions in this website, namely, PDF version, online engine and software version, and you can choose any one of them as you like. No matter you buy any version of our IDP exam questions, you will get success on your exam!

Never have we made our customers disappointed about our IDP study guide. So we have enjoyed good reputation in the market for about ten years. In the future, we will stay integrity and research more useful IDP learning materials for our customers. Please continue supporting our IDP Exam Questions and we will make a better job with your warm encourages and suggestions. So if you have any opinions about our IDP learning quiz, just leave them for us.

Valid IDP Test Registration, Valid IDP Torrent

This is a CrowdStrike IDP practice exam software for Windows computers. This IDP practice test will be similar to the actual IDP exam. If user wish to test the CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) study material before joining PassTesting, they may do so with a free sample trial. This IDP Exam simulation software can be readily installed on Windows-based computers and laptops. Since it is desktop-based IDP practice exam software, it is not necessary to connect to the internet to use it.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which of the following is NOT a default insight but can be created with a custom insight?

- A. GPO Exposed Password
- **B. Poorly Protected Accounts with SPN**

- C. Using Unmanaged Endpoints
- D. Compromised Password

Answer: B

Explanation:

In Falcon Identity Protection, default insights are prebuilt analytical views provided by CrowdStrike to immediately highlight common and high-impact identity risks across the environment. These default insights are automatically available in the Risk Analysis and Insights areas and are designed to surface well-known identity exposure patterns without requiring customization. Examples of default insights include Using Unmanaged Endpoints, GPO Exposed Password, and Compromised Password. These insights are natively provided because they represent frequent and high-risk identity attack vectors such as credential exposure, unmanaged authentication sources, and password compromise, all of which directly contribute to elevated identity risk scores. Poorly Protected Accounts with SPN (Service Principal Name), however, is not provided as a default insight. While Falcon Identity Protection does collect and analyze SPN-related risk signals—such as Kerberoasting exposure and weak service account protections—this specific grouping must be created by administrators using custom insight filters. Custom insights allow teams to define precise conditions, combine attributes (privilege level, SPN presence, password age, MFA status), and tailor risk visibility to their organization's threat model.

This distinction is emphasized in the CCIS curriculum, which explains that custom insights extend beyond default coverage, enabling deeper, organization-specific identity risk analysis. Therefore, Option D is the correct answer.

NEW QUESTION # 36

Which of the following actions will NOT help to decrease a domain risk score?

- A. Enabling SMB Signing within Active Directory
- **B. Upgrading endpoints running end-of-life Acrobat Reader**
- C. Upgrading endpoints running end-of-life operating systems
- D. Enforcing NTLMv2 responses

Answer: B

Explanation:

Falcon Identity Protection evaluates domain risk by analyzing identity-related weaknesses such as insecure authentication protocols, legacy directory configurations, and exposure to credential-based attacks. Actions that harden Active Directory and authentication mechanisms will directly reduce domain risk scores.

Measures such as enabling SMB signing, enforcing NTLMv2, and upgrading unsupported operating systems remove common identity attack paths and are explicitly recommended in the CCIS curriculum as effective domain risk remediation steps.

In contrast, upgrading end-of-life Acrobat Reader addresses an endpoint application vulnerability, not an identity or directory-related risk. While important for endpoint hygiene, it does not influence identity telemetry, authentication behavior, or domain controller security assessed by Falcon Identity Protection.

Because domain risk scoring is strictly tied to identity infrastructure and authentication posture, Option B does not contribute to lowering the domain risk score and is therefore the correct answer.

NEW QUESTION # 37

How many days will an identity-based incident be suppressed if new events related to the same incident occur?

- A. 30 days
- B. 7 days
- **C. 5 days**
- D. 14 days

Answer: C

Explanation:

Falcon Identity Protection uses incident suppression windows to prevent alert fatigue while still maintaining accurate incident tracking. According to the CCIS documentation, when new events related to an existing identity-based incident occur, the incident is suppressed for 5 days.

This suppression means that Falcon does not generate a new incident for the same activity during this window. Instead, additional detections are added to the existing incident, allowing analysts to view the full progression of the threat in a single investigative context.

The 5-day suppression window ensures that ongoing identity attacks-such as repeated authentication abuse or lateral movement-are consolidated rather than fragmented across multiple incidents. This improves investigation efficiency and aligns with Falcon's incident lifecycle management approach.

Because the suppression period is fixed at 5 days, Option D is the correct and verified answer.

NEW QUESTION # 38

The NIST SP 800-207 framework for Zero Trust Architecture defines validation and authentication standards for users in which network locations?

- A. Only those users inside the network
- B. Only those users accessing the network remotely over VPN
- C. Only those users outside the network
- **D. All users both inside and outside of the network**

Answer: D

Explanation:

The NIST SP 800-207 Zero Trust Architecture framework fundamentally rejects the concept of implicit trust based on network location. As outlined in both NIST guidance and reinforced in the CCIS curriculum, all users must be continuously validated and authenticated regardless of whether they are inside or outside the network perimeter.

Zero Trust assumes that threats can originate from anywhere, including internal networks. Therefore, authentication and authorization decisions must be made dynamically using identity, device posture, behavior, and risk signals-not network placement.

Falcon Identity Protection aligns directly with this principle by continuously evaluating identity behavior for all users, whether they authenticate from internal corporate networks, remote locations, or cloud environments.

Because Zero Trust applies universally, Option C is the correct and verified answer.

NEW QUESTION # 39

By using compromised credentials, threat actors are able to bypass the Execution phase of the MITRE ATT&CK framework and move directly into:

- A. Initial Access
- **B. Discovery**
- C. Weaponization
- D. Lateral Movement

Answer: B

Explanation:

The CCIS curriculum highlights a critical identity-security concept: when attackers use compromised credentials, they often bypass traditional malware-based attack phases, including the Execution phase of the MITRE ATT&CK framework. Because no malicious code needs to be executed, attackers can immediately begin interacting with the environment as a legitimate user.

As a result, threat actors move directly into the Discovery phase. During Discovery, attackers enumerate users, groups, privileges, systems, domain relationships, and trust paths to understand the environment and plan further actions. This behavior is commonly observed in identity-based attacks and living-off-the-land techniques.

Falcon Identity Protection is specifically designed to detect this behavior by monitoring authentication traffic, privilege usage, and anomalous identity activity-areas where traditional EDR tools may have limited visibility.

The other options are incorrect:

* Initial Access has already occurred via credential compromise.

* Weaponization and Execution are not required.

* Lateral Movement typically follows Discovery.

Because compromised credentials allow attackers to jump straight into Discovery, Option C is the correct and verified answer.

NEW QUESTION # 40

.....

We not only do a good job before you buy our IDP test guides, we also do a good job of after-sales service. Because we are committed to customers who decide to choose our IDP study tool. We put the care of our customers in an important position. All

customers can feel comfortable when they choose to buy our IDP study tool. We have specialized software to prevent the leakage of your information and we will never sell your personal information because trust is the foundation of cooperation between both parties. A good reputation is the driving force for our continued development. Our company has absolute credit, so you can rest assured to buy our IDP test guides.
