3V0-22.25受験料過去問、3V0-22.25試験対策

Jpshikenは長い歴史を持っているVMwareの3V0-22.25トレーニング資料が提供されるサイトです。IT領域で長い時間に存在していますから、現在のよく知られていて、知名度が高い状況になりました。これは受験生の皆様の助けた結果です。Jpshikenが提供したVMwareの3V0-22.25トレーニング資料は問題と解答に含まれていて、IT技術専門家たちによって開発されたものです。VMwareの3V0-22.25認定試験を受けたいのなら、Jpshikenを選ぶのは疑いないことです。

VMware Advanced VMware Cloud Foundation 9.0 Operation 認定 3V0-22.25 試験問題 (Q265-Q270):

質問 # 265

An administrator needs to add a fixed monthly "Management Fee" of \$25.00 to every VM tagged with "Department: Finance" to cover the cost of a managed service contract. Which feature in the Cost Settings facilitates this specific adder?

- A. Use the "Depreciation" tab to accelerate the write-off.
- B. Edit the "Server Hardware" cost driver and increase it by 25.
- C. ****Additional Costs****. The admin can create a new Additional Cost rule, define the amount (25), set the frequency (Monthly), and scope it to the "Department: Finance" group (or tag).
- D. Create a "Custom Property" on the VMs.

正解: C

質問 # 266

An administrator is configuring log forwarding from a "Remote Office" VCF Operations for Logs cluster to the "Central HQ" cluster. Which protocol setting in the forwarding destination provides the best bandwidth efficiency (compression) and security (encryption)

for this site-to-site transfer?

- A. Ingestion API (CFAPI). This proprietary protocol is optimized for VCF Operations for Logs-to-Log Insight communication, supporting native batching, compression, and SSL encryption out of the box.
- B. SNMP v3.
- C. Syslog (UDP).
- D. Syslog (TCP).

正解: A

質問 # 267

An Automation Central job is configured to "Delete Powered Off VMs" with a criteria of "Powered Off > 14 Days". A user manually powers off a VM on Monday. On Tuesday (1 day later), the user complains that the VM was deleted by the automation.

What is the most likely explanation for this behavior?

- A. The VM had a "Snapshot" that was older than 14 days, and the administrator mistakenly configured the job to "Delete Snapshots" instead of "Delete VMs", or configured a separate "Snapshot Cleanup" job that inadvertently deleted the VM state. (Or, most simply: The criteria logic uses the "Total Powered Off Time" metric which might accumulate if not reset properly, but C is the most direct config error).
- B. Automation Central ignored the criteria.
- C. The VM was actually powered off 2 weeks ago, briefly powered on, and then off again; the counter didn't reset.
- D. The Automation Central job was misconfigured with the wrong scope or criteria (e.g., "Powered Off > 0 Days").

正解: D

質問 # 268

A user complains that they are receiving email notifications for an alert named "vCenter - VM Created", even though they never created this alert and cannot find it in their "My Alerts" list.

What is the mostly likely reason?

- A. The user's email address was hardcoded into the liagent.ini file.
- B. The user has a virus.
- C. The system is sending emails to "Everyone".
- D. The alert is a Content Pack Alert or a Shared Alert created by an administrator, and the user's email was added to the Subscription list (or the user is part of a distribution list that was subscribed).

正解: D

質問 # 269

An organization wants to optimize VCF Operations storage by reducing the retention of "non-essential" metrics while keeping "critical" compliance metrics for a longer duration.

Why is this granular "Per-Metric Retention" difficult to implement in the standard VCF Operations architecture?

- A. It requires the Enterprise Plus license key.
- B. It is fully supported and easy to configure in the "Metric Definition" page.
- C. It requires the use of "Data Nodes" exclusively for the critical metrics.
- D. VCF Operations applies retention policies globally or per-object-type via Policy, but generally does not support setting "Metric A = 30 days" and "Metric B = 365 days" for the same object. The retention engine purges data based on time slices for the whole object.

正解: D
