## Certified Solutions Architect - Associate (SAA-C03) Exam Dumps Demo

The second form is AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) web-based practice test. It can be attempted through online browsing, and you can prepare via the internet. The AWS-Solutions-Architect-Associate web-based practice test can be taken from Firefox, Microsoft Edge, Google Chrome, and Safari. You don't need to install or use any plugins or software to take the AWS-Solutions-Architect-Associate web-based practice exam. Furthermore, you can take this online mock test via any operating system.

### Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q618-Q623):

#### NEW QUESTION # 618

A Solutions Architect must migrate a monolithic on-premises application to AWS. It is a web application with a load balancer, web server, application server, and relational database. The key requirement driving the migration is that the application should perform better and be more elastic.

Which of the following architectures would meet these requirements?

- A. Re-architect the application as Service Oriented Architecture (SOA). Run database and application servers on-premises. Run web-facing EC2 servers. Use an Enterprise Service Bus to handle communications between different parts of the application running on-premises and in the cloud.
- **B. Re-host the application on Amazon EC2 with lift and shift of existing application code. Configure an Elastic Load Balancing load balancer to handle incoming requests. Use Amazon CloudWatch alarms to receive notification of scaling issues. Increase and decrease the size of the Amazon EC2 instances using AWS CLI or AWS Management Console as required.**
- C. Re-architect the application as a three-tier application. Move the database to Amazon RDS. Use read replicas and Amazon ElastiCache with RDS for better performance. Use an Application Load Balancer to forward incoming requests to web and application servers running on-premises.
- D. Re-platform the application as a three-tier application. Use Elastic Load Balancing for incoming requests. Use EC2 for web and application tiers. Use RDS at the database tier. Use CloudWatch alarms and Auto Scaling for horizontal scaling at the web tier.

**Answer: B**

#### NEW QUESTION # 619

A user is planning to launch multiple EC2 instance same as current running instance.

Which of the below mentioned parameters is not copied by Amazon EC2 in the launch wizard when the user has selected the option "Launch more like this"?

- A. Shutdown behavior
- B. Tenancy setting
- **C. Storage**
- D. Termination protection

**Answer: C**

Explanation:

The Amazon EC2 console provides a "Launch more like this" wizard option that enables the user to use a current instance as a template for launching other instances. This option automatically populates the Amazon EC2 launch wizard with certain configuration details from the selected instance.

The following configuration details are copied from the selected instance into the launch wizard: AMI ID Instance type Availability Zone, or the VPC and subnet in which the selected instance is located Public IPv4 address. If the selected instance currently has a public IPv4 address, the new instance receives a public IPv4 address - regardless of the selected instance's default public IPv4 address setting.

For more information about public IPv4 addresses, see Public IPv4 Addresses and External DNS Hostnames.

Placement group, if applicable

IAM role associated with the instance, if applicable Shutdown behavior setting (stop or terminate) Termination protection setting (true or false) CloudWatch monitoring (enabled or disabled) Amazon EBS-optimization setting (true or false) Tenancy setting, if launching into a VPC (shared or dedicated) Kernel ID and RAM disk ID, if applicable User data, if specified Tags associated with the instance, if applicable Security groups associated with the instance The following configuration details are not copied from your

selected instance; instead, the wizard applies their default settings or behavior:

(VPC only) Number of network interfaces: The default is one network interface, which is the primary network interface (eth0).

Storage: The default storage configuration is determined by the AMI and the instance type.

#### NEW QUESTION # 620

A large company experienced a drastic increase in its monthly AWS spend. This is after Developers accidentally launched Amazon EC2 instances in unexpected regions. The company has established practices around least privileges for Developers and controls access to on-premises resources using Active Directory groups. The company now want to control costs by restricting the level of access that Developers have to the AWS Management Console without impacting their productivity. The company would also like to allow Developers to launch Amazon EC2 in only one region, without limiting access to other services in any region.

How can this company achieve these new security requirements while minimizing the administrative burden on the Operations team?

- A. Set up SAML-based authentication tied to an IAM role that has a PowerUserAccess managed policy and a customer managed policy that deny all the Developers access to any AWS services except AWS Service Catalog. Within AWS Service Catalog, create a product containing only the EC2 resources in the approved region.
- B. Create an IAM user for each Developer and add them to the developer IAM group that has the PowerUserAccess managed policy attached to it. Attach a customer managed policy that allows the Developers access to Amazon EC2 only in the required region.
- C. Set up SAML-based authentication tied to an IAM role that has the PowerUserAccess managed policy attached to it. Attach a customer managed policy that denies access to Amazon EC2 in each region except for the one required.
- D. Set up SAML-based authentication tied to an IAM role that has an AdministrativeAccess managed policy attached to it. Attach a customer managed policy that denies access to Amazon EC2 in each region except for the one required.

**Answer: A**

#### NEW QUESTION # 621

A Solutions Architect is designing a solution to send Amazon CloudWatch Alarm notifications to a group of users on a smartphone mobile application.

What are the key steps to this solution? (Choose two.)

- A. Subscribe the SNS topic with an Amazon SQS queue, and poll the messages continuously from the queue. Use each mobile platform's libraries to send the message to the mobile application.
- B. Configure the CloudWatch Alarm to send the notification to a mobile phone number whenever there is an alarm.
- C. Configure the CloudWatch Alarm to send the notification to an Amazon SNS topic whenever there is an alarm.
- D. Create the platform endpoints for mobile devices and subscribe the SNS topic with platform endpoints.
- E. Configure the CloudWatch Alarm to send the notification to the email addresses whenever there is an alarm.

**Answer: C,D**

#### NEW QUESTION # 622

A company is managing health records on-peruses. The company must keep these records Indefinitely, disable any modifications to the records once they are stored, and granularly audit access at all levels. The chief technology officer (CTO) is concerned because there are already millions of record not being used by any application, and the current infrastructure is running out of space. The CTO has requested solutions architect design a solution to move easting data and support future records.

Which services can the solutions architect recommend to meet these requirements?

- A. Use AWS Storage Gateway to move existing data to AWS Use Amazon S3 to store existing and new data Enable Amazon S3 object lock and enable AWS CloudTrail with management events
- B. Use AWS DataSync to move exiting data to AWS Use Amazon S3 to store existing and new data. Enable Amazon S3 object lock and enable AWS CloudTrail with management events.
- C. Use AWS DataSync to move existing data to AWS Use Amazon S3 to store existing and new data Enable Amazon S3 object lock and enable AWS CloudTrail with data events
- D. Use AWS Storage Gateway to move existing data to AWS Use Amazon Elastic Block Stores (Amazon EBS) to store existing and new data. Enable Amazon S3 object lock and enable Amazon S3 server access logging

**Answer: C**

## NEW QUESTION # 623

.....

Our Amazon AWS-Solutions-Architect-Associate real test can bring you the most valid and integrated content to ensure that what you study with is totally in accordance with the real Amazon AWS-Solutions-Architect-Associate Exam. And we give sincere and suitable after-sales service to all our customers to provide you a 100% success guarantee to pass your exams on your first attempt.
