People around you are improving their competitiveness in various ways. Haven't you started to move? You must be more efficient than others before you can do more and get more pay! Our CISM study materials will tell you that in a limited time, you can really do a lot of things. Of course, the quality of our CISM Exam Questions is also very high. As you can say that with the help of our CISM practice guide, the pass rate for our loyal customers is high as 98% to 100%. It is unique in the market.

The CISM exam is a comprehensive test that covers four domains of information security management: Information Security Governance, Risk Management, Information Security Program Development and Management, and Information Security Incident Management. These domains encompass a range of topics, including information security strategy, policies and procedures, risk assessments, incident response, and more. CISM Exam is designed to test the candidate's understanding of these topics, as well as their ability to apply this knowledge in real-world scenarios.

100% Pass 2026 Authoritative ISACA CISM: Certified Information Security Manager Pass4sure Pass Guide

As the famous saying goes, time is life. Time is so important to everyone because we have to use our limited time to do many things. Especially for candidates to take the CISM exam, time is very precious. They must grasp every minute and every second to prepare for it. From the point of view of all the candidates, our CISM Study Materials give full consideration to this problem. We can send you a link within 5 to 10 minutes after your payment.

ISACA Certified Information Security Manager Sample Questions (Q451-Q456):

NEW QUESTION # 451

Which of the following threats is prevented by using token-based authentication?

- A. Password sniffing attack on the network
- B. Denial of service attack over the network
- C. Session eavesdropping attack on the network
- D. Man-in-the middle attack on the client

Answer: A

Explanation:

Section: INFORMATION SECURITY PROGRAM MANAGEMENT

NEW QUESTION # 452

Which of the following will BEST protect against malicious activity by a former employee?

- A. Preemployment screening
- B. Close monitoring of users
- C. Effective termination procedures
- D. Periodic awareness training

Answer: C

Explanation:

Explanation/Reference:

Explanation:

When an employee leaves an organization, the former employee may attempt to use their credentials to perform unauthorized or malicious activity. Accordingly, it is important to ensure timely revocation of all access at the time an individual is terminated. Security awareness training, preemployment screening and monitoring are all important, but are not as effective in preventing this type of situation.

NEW QUESTION # 453

Which of the following poses the GREATEST risk to the operational effectiveness of an incident response team?

- A. The lack of forensic investigation skills
- B. The lack of a security information and event management (SIEM) system
- C. The lack of delegated authority
- D. The lack of automated communication channels

Answer: C

NEW QUESTION # 454

An employee has just reported the loss of a personal mobile device containing corporate information. Which of the following should the information security manager do FIRST?

- A. Conduct a risk assessment
- B. Initiate a device reset
- C. Initiate incident response
- D. Disable remote access

Answer: A

NEW QUESTION # 455

Which of the following BEST provides message integrity, sender identity authentication and nonrepudiation?

- A. Message authentication code
- B. Message hashing
- C. Symmetric cryptography
- D. Public key infrastructure (PKI)

Answer: D

Explanation:

Explanation/Reference:

Explanation:

Public key infrastructure (PKI) combines public key encryption with a trusted third party to publish and revoke digital certificates that contain the public key of the sender. Senders can digitally sign a message with their private key and attach their digital certificate (provided by the trusted third party). These characteristics allow senders to provide authentication, integrity validation and nonrepudiation. Symmetric cryptography provides confidentiality. Mashing can provide integrity and confidentiality. Message authentication codes provide integrity.

NEW QUESTION # 456

.....
