Discount is being provided to the customer for the entire SAP C_BCBTP_2502 preparation suite. These C_BCBTP_2502 learning materials include the C_BCBTP_2502 preparation software & PDF files containing sample Interconnecting SAP C_BCBTP_2502 and answers along with the free 90 days updates and support services. We are facilitating the customers for the SAP C_BCBTP_2502 preparation with the advanced preparatory tools.

Our C_BCBTP_2502 training guide always promise the best to service the clients. Carefully testing and producing to match the certified quality standards of C_BCBTP_2502 exam materials, we have made specific statistic researches on the C_BCBTP_2502 practice materials. And the operation system of our C_BCBTP_2502 practice materials can adapt to different consumer groups. Facts speak louder than words. Through years' efforts, our C_BCBTP_2502 exam preparation has received mass favorable reviews because the 99% pass rate is the powerful proof of trust of the public.

High C_BCBTP_2502 Quality & Exam C_BCBTP_2502 Bible

If you want to be the talent the society actually needs you must apply your knowledge into the practical working and passing the test

C_BCBTP_2502 certification can make you become the talent the society needs. If you buy our C_BCBTP_2502 study materials you will pass the exam successfully and realize your goal to be the talent. We have been in this career for over ten years and we have been the leader in the market. Our C_BCBTP_2502 Exam Question are always the latest and valid for you to pass the exam.

SAP C_BCBTP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.
Topic 2	<ul style="list-style-type: none"> • Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q36-Q41):

NEW QUESTION # 36

How does SAP LeanIX enhance business IT governance when integrated with SAP BTP?

- **A. By providing IT landscape analysis and risk management.**
- B. By preventing cloud-based integrations.
- C. By eliminating enterprise architecture visualization.
- D. By restricting governance frameworks to manual tracking.

Answer: A

Explanation:

IT governance is often a challenge during rapid digital expansion. As more services are deployed on SAP BTP, maintaining a clear overview of the "who, what, and where" becomes critical. SAP LeanIX enhances business IT governance by providing a structured framework for IT landscape analysis and risk management. It acts as a "single source of truth" for the enterprise architecture, documenting all applications, their dependencies, and the business capabilities they support.

When integrated with SAP BTP, LeanIX helps organizations avoid "SaaS sprawl" (the unmanaged growth of cloud applications). It provides visibility into which BTP services are being used and identifies potential security risks, such as applications running on outdated versions or services that lack proper data privacy controls. This level of transparency is essential for compliance and cost management. By analyzing the "Technical Fit" and "Business Fit" of the IT landscape, LeanIX allows executives to make informed decisions about decommissioning legacy systems and investing in new BTP-driven innovations. This strategic positioning ensures that the evolution of the SAP Business Suite is governed by data rather than guesswork, reducing operational risk and ensuring that the IT infrastructure is robust, secure, and fully aligned with the organization's long-term goals.

NEW QUESTION # 37

How does SAP BTP enable businesses to extend their existing SAP applications?

- A. By restricting integration with external systems.
- B. By limiting customization to SAP standard functionalities.
- **C. By providing low-code/no-code development tools.**
- D. By requiring all applications to be developed from scratch.

Answer: C

Explanation:

A fundamental principle of modernizing the SAP ecosystem is the concept of a "Clean Core." SAP BTP enables this by allowing organizations to build extensions "side-by-side" rather than within the core ERP code (classic "in-app" customization). By providing low-code/no-code development tools, such as SAP Build, the platform empowers both professional developers and "citizen developers" (business users with limited coding knowledge) to create applications that add specific business value without compromising the stability or upgradeability of the core SAP S/4HANA system.

These tools allow for the rapid creation of user interfaces using SAP Fiori elements and the automation of manual tasks through visual drag-and-drop interfaces. This approach is a stark contrast to traditional development, which often required extensive, custom ABAP coding that made system upgrades difficult and expensive. By positioning BTP as the extension layer, SAP ensures that businesses can remain agile and respond quickly to market changes. This flexibility is supported by a robust set of services that facilitate secure communication between the extension and the core system via APIs. Consequently, businesses can innovate at the edge while maintaining a stable, standardized digital core, which is the hallmark of the SAP Business Suite's evolution into the cloud era.

NEW QUESTION # 38

Why is SAP BTP considered a strategic platform for digital transformation?

- A. It allows enterprises to move all workloads to SAP on-premise solutions.
- B. It provides a one-size-fits-all solution without customization options.
- C. It eliminates the need for external data management solutions.
- **D. It centralizes integration, automation, and data-driven decision-making.**

Answer: D

Explanation:

SAP BTP is the strategic foundation for the "Intelligent, Sustainable Enterprise." Its primary value lies in its ability to centralize integration, automation, and data-driven decision-making into a single, unified platform. In a modern IT landscape, data is often fragmented across multiple cloud and on-premise systems.

BTP acts as the unified technical layer that breaks down these silos. By providing a common set of services for data management (SAP HANA Cloud), analytics (SAP Analytics Cloud), and integration (SAP Integration Suite), BTP ensures that business leaders have a holistic view of their operations.

Digital transformation requires more than just moving to the cloud; it requires the ability to innovate quickly.

BTP's strategic positioning allows businesses to extend their core SAP applications (like S/4HANA) using side-by-side extensions. This keeps the "core" clean and stable while allowing for rapid innovation at the edge. Furthermore, the platform's automation capabilities (like SAP Build Process Automation) enable companies to optimize their workflows, reducing manual effort and increasing accuracy. By choosing BTP, enterprises are not just buying a set of tools; they are adopting a platform strategy that supports continuous improvement and agility, ensuring they can adapt to market changes more effectively than they could with fragmented, legacy architectures.

NEW QUESTION # 39

What is the primary function of SAP BTP's SAP Fiori tools?

- A. To replace SAP S/4HANA transactional screens.
- B. To develop backend APIs for database integration.
- **C. To build user-friendly applications with a consistent UI/UX experience.**
- D. To deploy third-party CRM solutions.

Answer: C

Explanation:

User adoption is often the biggest hurdle in enterprise software deployment. The primary function of SAP Fiori tools on BTP is to solve this by enabling the creation of user-friendly applications with a consistent UI/UX experience. SAP Fiori is the design language for all modern SAP applications, moving away from complex, menu-heavy traditional screens toward a role-based, intuitive interface that works seamlessly across desktops, tablets, and smartphones.

On SAP BTP, Fiori tools (integrated within SAP Business Application Studio) provide templates and floorplans that help developers quickly build applications that look and behave exactly like standard SAP S/4HANA apps. This consistency is vital for the SAP Business Suite because it reduces training time and minimizes user error. When an employee moves from an HR task in SuccessFactors to a finance task in S/4HANA, the interface remains familiar. By positioning Fiori as the "face" of the platform, SAP ensures that the complex technical

capabilities of BTP-such as AI insights or real-time data-are delivered to the end- user in a simple, actionable, and modern way, ultimately increasing productivity and employee satisfaction.

NEW QUESTION # 40

Which of the following are key products of SAP Business Technology Platform (SAP BTP)? (Choose two).

- A. SAP Integration Suite
- B. SAP SuccessFactors
- C. SAP Ariba
- D. SAP HANA Cloud

Answer: A,D

Explanation:

SAP Business Technology Platform (SAP BTP) is organized into four primary functional pillars: Database and Data Management, Analytics, Application Development and Integration, and Intelligent Technologies.

SAP HANA Cloud serves as the foundation of the Database and Data Management pillar, providing a single, integrated powerhouse for all enterprise data. It offers the speed of in-memory processing combined with the scalability of the cloud, allowing businesses to manage large volumes of data while providing a "single source of truth." On the other hand, SAP Integration Suite is the cornerstone of the Integration pillar. It is an integration platform-as-a-service (iPaaS) that allows organizations to seamlessly connect SAP and non-SAP applications, whether they reside on-premise or in the cloud. It provides pre-built content and connectors that significantly reduce the complexity of landscape orchestration. In contrast, SAP Ariba and SAP SuccessFactors are specialized Software-as-a-Service (SaaS) applications. While they are part of the broader SAP ecosystem and often run on or integrate via BTP, they are considered line-of-business (LoB) solutions rather than core components of the technology platform itself. Understanding this distinction is vital for positioning BTP as the underlying "glue" that enables the "Intelligent Enterprise" strategy by providing the technical tools necessary to extend and integrate these LoB applications.

NEW QUESTION # 41
