- B. The slave will discard IP packets whose destination MAC address is the virtual MAC address
- C. When the slave receives the VRRP message sent by the Master, it can judge whether the status of the Master is normal
- D. When receiving a VRRP message with a priority of 0, the Slave will directly switch to the Master

Answer: B,C

### NEW QUESTION # 142

Which of the following statements regarding OSPF multi-instance is false?

- A. Route exchange between different OSPF processes is similar to route exchange between different routing protocols.
- B. Multiple OSPF processes can run on the same router, and they are independent of each other.
- C. An interface of a router belongs to only a certain OSPF process.
- D. The OSPF process IDs must be the same when OSPF neighbor relationships are established between different routers.

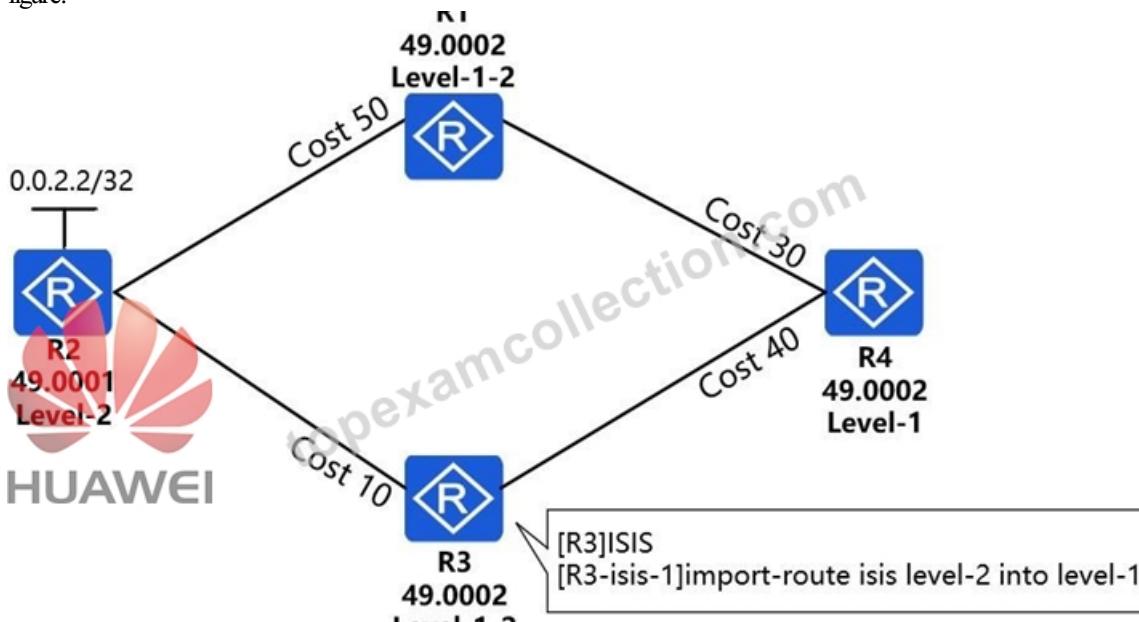

Answer: D

Explanation:

OSPF process IDs are locally significant and do not need to match between routers to form neighbor relationships. The other statements correctly describe the behavior of OSPF multi-instances, making Option C false .
