Exams4sures are supposed to help you pass the exam smoothly. Do not worry about channels to the best Salesforce Certified Omnistudio Consultant Plat-Con-201 study materials because we are the exactly best vendor in this field for more than ten years. And so many exam candidates admire our generosity of the Salesforce Plat-Con-201 Practice Questions offering help for them. Up to now, no one has ever challenged our leading position of this area.

### Salesforce Certified Omnistudio Consultant Sample Questions (Q79-Q84):

#### NEW QUESTION # 79

Which of the following is a key difference between Integration Procedures and DataRaptors?

- A. DataRaptors can invoke multiple actions in a single server call.
- B. DataRaptors can access data from external sources.

- C. Integration Procedures can retrieve data from multiple related objects.
- **D. Integration Procedures can access data from external sources.**

**Answer: D**

Explanation:

The key difference between Integration Procedures and DataRaptors is that Integration Procedures can access data from external sources, while DataRaptors can only access data from Salesforce. Integration Procedures allow the designer to create complex API queries declaratively using HTTP Actions or SOAP Actions.

DataRaptors allow the designer to read, transform, and write data between Salesforce objects or fields. Both Integration Procedures and DataRaptors can invoke multiple actions in a single server call, and both can retrieve data from multiple related objects.

### NEW QUESTION # 80

A company has an existing OmniScript running in production. The business decides additional customer information is needed and wants to add more questions to the process.

What is the most efficient approach that the consultant can recommend to the business to meet this requirement?

- **A. Add a new Step element with Input elements**
- B. Add an embedded FlexCard
- C. Add an LWC component
- D. Add an Input Action to a Step

**Answer: A**

Explanation:

The most efficient approach that the consultant can recommend to the business to meet this requirement is to add a new Step element with Input elements. A Step element can group related fields and elements in an OmniScript, and display them in a page or a section. An Input element can display a field for the user to enter data, such as text, number, date, etc. The consultant can use a Step element to add a new page or section to the OmniScript, and then use Input elements to collect the additional customer information.

### NEW QUESTION # 81

A company has several customer support departments. Each department has different case creation processes, but they want to unify them into a single LWC OmniScript. During the discovery, the consultant identifies two key requirements:

- \* Each department has different case fields they need to capture
- \* If the user cancels the process, they should return to a support console app

Which two OmniScript features should the consultant recommend to meet these requirements?

Choose 2 answers

- A. Add a Done action that redirects to the support console
- **B. Set Enable Cancel in Setup**
- **C. Use Conditional Views on steps for each department**
- D. Enable the Save for Later feature

**Answer: B,C**

Explanation:

\* Set Enable Cancel in Setup (B) - This ensures that users can cancel the OmniScript process and be redirected to a specific URL (e.g., support console app).

\* Use Conditional Views on steps for each department (C) - Conditional Views allow different fields to be displayed based on department-specific requirements, ensuring that each department only sees the fields relevant to them.

\* A. Enable the Save for Later feature - This allows users to pause and resume the OmniScript later, but the question specifically asks about canceling the process, not saving progress.

\* D. Add a Done action that redirects to the support console - The Done Action is used to submit the process, but the question focuses on handling the cancellation scenario, making "Enable Cancel" the better choice.

Comprehensive and Detailed In-Depth Explanation: Why not the other options?? Salesforce OmniStudio Reference:

\* OmniScript Conditional Views

\* OmniScript Enable Cancel Option

### NEW QUESTION # 82

A business has a project that must be completed soon in order to meet important deadlines. However, the developer on the project has left the company, and the new team on the project has decided to use OmniStudio tools. The development work completed so far was done using APEX code. The new team must complete the project following these guidelines:

- \* Minimize implementation time
- \* Ensure end-user processes are as simple as possible
- \* Find a way to ensure optimal UX

In this scenario, what two actions should the consultant recommend to the project team? Choose 2 answers

- A. Replace existing APEX using DataRaptors and HTTPActions
- **B. Implement FlexCards and OmniScripts for the front-end**
- C. Use existing APEX classes as data sources
- D. Create new LWC templates for branding and styling

**Answer: B**

Explanation:

The two actions that the consultant should recommend to the project team are replace existing APEX using DataRaptors and HTTPActions, and implement FlexCards and OmniScripts for the front-end. Replacing existing APEX using DataRaptors and HTTPActions would reduce implementation time, as these tools are declarative and do not require coding. Implementing FlexCards and OmniScripts for the front-end would ensure end-user processes are as simple as possible, as these tools provide guided interactions and contextual data. Creating new LWC templates for branding and styling would increase implementation time, as this would require coding and testing. Using existing APEX classes as data sources would not ensure optimal UX, as this would limit the flexibility and scalability of the solution.

### NEW QUESTION # 83

A Salesforce Omnistudio Consultant is tasked with creating an Omniscrypt for a client's customer service process. The consultant wants to integrate Salesforce Knowledge into the Omniscrypt.

What is one way the consultant can configure an Omniscrypt to search for Salesforce Knowledge articles?

- A. Using a simple search ..
- **B. Based on dynamic inputs from Omniscrypt fields**
- C. Based on static values set up during configuration
- D. Using a complex search algorithm

**Answer: B**

Explanation:

\* Based on dynamic inputs from OmniScript fields (C) - The best way to integrate Salesforce Knowledge with an OmniScript is to dynamically retrieve articles based on user inputs.

\* A DataRaptor Extract or Integration Procedure can fetch Knowledge Articles based on values entered in the OmniScript fields (e.g., case type, keywords).

\* A. Using a simple search - While a simple search is possible, OmniScripts allow for dynamic queries based on user input, making them more flexible.

\* B. Using a complex search algorithm - OmniStudio does not have a complex search algorithm feature built into OmniScripts.

\* D. Based on static values set up during configuration - Using static values would not allow for dynamic filtering based on user inputs.

Comprehensive and Detailed In-Depth Explanation: Why not the other options?? Salesforce Omnistudio Reference:

\* OmniScript Integration with Salesforce Knowledge

\* Using DataRaptors to Fetch Knowledge Articles

### NEW QUESTION # 84
