

# VMware 3V0-21.25 Reliable Study Notes - 3V0-21.25 Reliable Exam Preparation

BTW, DOWNLOAD part of TopExamCollection 3V0-21.25 dumps from Cloud Storage: <https://drive.google.com/open?id=1RSuqTJIUd7RiXHmF8L8tAISv7ssY0Zrs>

In order to meet different needs of our customers, we have three versions for 3V0-21.25 study guide materials. All three versions have free demo for you to have a try. 3V0-21.25 PDF version is printable, and you can study them in anytime and at anyplace. 3V0-21.25 Soft test engine supports MS operating system, have two modes for practice, and can build up your confidence by stimulating the real exam environment. 3V0-21.25 Online Test engine can practice online anytime, it also have testing history and performance review. Just have a look, there is always a version for you.

## VMware 3V0-21.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>VMware Products and Solutions: This section covers VMware products related to VMware Cloud Foundation Automation, particularly components such as vSphere Supervisor and supervisor-based NSX networking. It focuses on identifying and differentiating architectural components and how they function within a deployment.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware Solution: This section covers configuring and administering VMware Cloud Foundation Automation environments. It includes managing provider portals, organizations, integrations, governance policies, resource deployments, automation workflows, blueprints, and orchestrator components.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Plan and Design the VMware Solution: This section focuses on designing VMware Cloud Foundation Automation environments based on business and technical requirements. It includes understanding tenancy deployment models, organization types, and the functional components used to structure and manage cloud resources.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Operation Management: This section focuses on monitoring and managing operational aspects of VMware Cloud Foundation Automation. It includes using VMware operations tools to monitor automation services, provider management, and organizational environments.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section focuses on understanding fundamental IT architectures, technologies, and industry standards that support VMware Cloud Foundation environments. It ensures candidates understand the foundational concepts required to design and manage automated cloud infrastructure solutions.</li> </ul>

## 3V0-21.25 Reliable Exam Preparation - Latest 3V0-21.25 Test Vce

We have harmonious cooperation with exam candidates. The relation comes from the excellence of our 3V0-21.25 training materials. We never avoid our responsibility of offering help for exam candidates like you, so choosing our 3V0-21.25 practice dumps means you choose success. Moreover, without the needs of waiting, you can download the 3V0-21.25 Study Guide after paying for it immediately. And we have patient and enthusiastic staff offering help on our 3V0-21.25 learning prep.

### VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q14-Q19):

#### NEW QUESTION # 14

A customer needs to deploy Kubernetes-based workloads in a newly created VMware Cloud Foundation (VCF) workload domain.

Which two prerequisites must be met before creating an AllApps Organization in VMware Cloud Foundation (VCF) Automation? (Choose two.)

- A. The VMware Kubernetes Service (VKS) must be activated within the VCF Management domain.
- **B. Supervisor must be activated within the VCF workload domain.**
- C. Supervisor must be activated within the VCF Management domain and workload domain.
- D. The VCF workload domain must be configured for VMware NSX Federation.
- **E. A Region must be configured within the VCF Automation Provider Management Portal.**

**Answer: B,E**

Explanation:

To support an AllApps Organization, which is inherently designed for both Kubernetes and VM workloads, the underlying infrastructure must be "modernized" via the vSphere Supervisor. Activating the Supervisor within the specific Workload Domain is the primary prerequisite, as it transforms the standard vSphere clusters into a Kubernetes-native control plane. Once the hardware/vSphere layer is ready, the next mandatory step takes place within the VCF Automation Provider Management Portal, where the administrator must define a Region. The Region acts as the "bridge" between the physical workload domain and the logical Organization; it discovers the Supervisor clusters and makes their compute, memory, and storage classes available for tenant assignment. Without a defined Region, the AllApps Organization has no source of resources to consume, and without an active Supervisor, the AllApps networking (VPC) and container services (VKS) cannot function.

#### NEW QUESTION # 15

A customer requires a backup of blueprints within VMware Cloud Foundation (VCF) Automation to a third- party solution each time the blueprint is released.

What construct will satisfy the requirement?

- A. ArgoCD service
- **B. Event broker subscription**
- C. Velero service
- D. CloudConfig

**Answer: B**

Explanation:

To automate the export or backup of Blueprints (Cloud Templates) in VCF 9.0, the Event Broker Service (EBS) is the required mechanism. While Velero (Option A) is used for backing up vSphere Pods and ArgoCD (Option C) is for continuous delivery, neither is designed to "listen" for internal automation metadata changes.

By creating an Event Broker Subscription mapped to the "Blueprint Released" or "Template Version Created" topic, the administrator can trigger an action every time a developer finalizes a new version of their infrastructure code. This triggered action (typically an ABX or Orchestrator task) can then programmatically retrieve the YAML definition of the blueprint via the VCF Automation API and push it to an external third- party storage solution or a secondary Git repository for long-term archival and backup. This ensures that the organization maintains a complete, off-appliance history of its infrastructure designs, satisfying auditing and disaster recovery requirements.

#### NEW QUESTION # 16

An administrator must initiate the deployment of a new 3-tier application architecture using the VMware Cloud Foundation (VCF) Automation portal. This application includes:

- \* A web tier (stateless).
- \* A business logic tier (some local caching).
- \* A database tier (stateful, PostgreSQL).
- \* An NSX load balancer fronting the web tier.
- \* ~99.9% uptime requirement.
- \* Moderate performance requirements.

Which requirement represents a risk inherent to single-zone deployments?

- A. A higher latency between application tiers.
- B. A split-brain isolation.
- **C. A shared failure domain for all application tiers.**
- D. A higher network complexity.

**Answer: C**

Explanation:

The primary architectural risk in any single-zone deployment within VCF 9.0 is the existence of a shared failure domain. In a single-zone Supervisor cluster or workload domain, all components—including the web, application, and database tiers—reside within the same logical and often physical infrastructure boundary (such as a single rack or data center room). If the underlying zone experiences a critical failure, such as a localized power outage, cooling failure, or a total top-of-rack switch collapse, the entire 3-tier application stack will go offline simultaneously. For mission-critical applications requiring high availability, VCF 9.0 recommends a multi-zone or stretched cluster architecture. In such designs, the failure of one zone does not compromise the entire application because the tiers can be distributed across different fault domains, ensuring that the stateless web tier and stateful database remain operational elsewhere. In the context of the 99.9% uptime requirement mentioned, a single-zone design represents a significant risk because it lacks the redundancy needed to survive zone-level disruptions.

#### NEW QUESTION # 17

What are two prerequisites to enable provisioning VMs via kubectl against tenant resources? (Choose two.)

- A. Ask the Provider to generate a token via the system APIs.
- B. Create a new extensibility Action.
- C. Create a context via kubectl.
- **D. Generate an API token from the VCF Automation UI.**
- **E. Create a context via VCF CLI.**

**Answer: D,E**

#### NEW QUESTION # 18

An administrator is designing a VCF Automation service catalog item that enables development teams from multiple business units to deploy standardized environments for microservices applications. The solution must support consistent configuration, minimize environment sprawl, and enforce automated decommissioning policies. Which three capabilities of VMware Cloud Foundation (VCF) Automation can be used to meet these requirements? (Choose three.)

- **A. Allow predefined firewall rules for outbound access.**
- B. Create DNS entry for cost center tracking.
- **C. Create a custom cloud-init configuration to installing standard company tooling.**
- **D. Define and assign a lease policy.**
- E. Provide a Virtual Machine (VM) template running Ubuntu with Docker pre-installed.

**Answer: A,C,D**

Explanation:

To meet the requirements of a standardized, governed microservices environment, VCF 9.0 Automation provides several key features. First, Lease Policies are the primary tool for minimizing "environment sprawl" and enforcing automated decommissioning. By assigning a lease, the administrator ensures that resources are automatically reclaimed after a set period unless a renewal is explicitly granted, preventing "forgotten" deployments from consuming expensive capacity. Second, cloud-init (or the similar cloudConfig stanza) allows for the standardized, post-deployment configuration of the VM OS, such as installing security agents or

company-specific developer tools, ensuring every environment is consistent from "Day 0". Finally, predefined firewall rules (often delivered via NSX VPC Security Profiles) ensure that newly deployed environments adhere to the organization's security standards. This prevents developers from manually (and potentially incorrectly) configuring networking, thereby automating the "Secure-by-Design" requirement within the self-service catalog item.

## NEW QUESTION # 19

.....

There is no need to worry about virus on buying electronic products. For TopExamCollection have created an absolutely safe environment and our exam question are free of virus attack. We make endless efforts to assess and evaluate our 3V0-21.25 exam question' reliability for a long time and put forward a guaranteed purchasing scheme. If there is any doubt about it, professional personnel will handle this at first time, and you can also have their remotely online guidance to install and use our 3V0-21.25 Test Torrent.
